CHRYSANTHEMUMS.

The Belfast Chrysanthemum, The Queen of Winter. The most profitable 'mum in sight for Christmas and later. Easily sells for one-third more than Nonin or any other variety. Size, color and keeping qualities is what does it. Can be had all through the winter by propagating and planting late. They are fine to follow early 'mums; of the very largest size. Color, light pink to cream white. Perfectly healthy and easy to grow. A seedling of W. H. Chadwick and Western King. Extra large cuttings from soil or sand, $2.50 per dozen; $18 per 100, prepaid. Willis E. Hamilton, Belfast, Me.

Chrysanthemums. C. H. Totty, Madison, N. J.

St. Louis,

PLANTERS BUSY.

The much belated planting season has started and the work is being rushed now. The market is again crowded with everything. Sweet peas are to be seen daily on the bargain counter. Peonies are now arriving more freely. There has been an over-abundance of long American Beauty roses, but they are taking on wood and the buds are daily becoming smaller. The next important period will be Decoration day and the question is whether stock will be scarce. There is no doubt that stock will be good. Cape jasmines are expected this week. Everyone is waiting the new crop of ferns, prices on this item having gone away up.

CLUB MEETING.

The monthly meeting of the Florists' Club took place May 11, with an attendance of 13, many being busy planting out. President Young was in the chair. Wm. Smith has charge of the transportation to the S. A. F. convention. It is expected that a large delegation will attend, traveling by the Big Four route. Visiting florists will be invited to join. Mr. Smith will try to obtain a rate and special car to convey the members and their friends in a body. The trustees were instructed to name the day and location of the annual outing some time in July. The crepe pulling question was tabled, leaving each individual to state the case to his customers.

D. A. Casey, formerly with Grimm & Gorly, has charge of the grounds and the new sunken parterre at Delmar garden. W. F.

Davenport, Ia.

Plant trade has at last got down to business, and every florist has all he can handle. This has been the most backward and disagreeable spring experienced here for years. There will be practically nothing for Decoration day with the exception of greenhouse stock. Peonies will be too late, and lilacs will be gone. Store business has been up to the standard. Many weddings and funerals keep everything cleaned up fairly well.

FLORISTS' CLUB.

The May meeting of the Tri-city Florists' Club was held at the home of Henry Pauli May 13. "Insecticides" was the topic for the evening discussion, lead by Theo. Ewoldt, who had come prepared having a lengthy paper on the subject, which was of great interest to all present. After routine matters were disposed of a fine supper was served and a social hour was enjoyed, wishing Wm. Knees a safe journey to Germany June 8. Mr. Knees will stop off in Chicago for a day, then to Niagara Falls, then to Albany, down the Hudson river to New York. Theo. Ewoldt will entertain the club at Floral Hill gardens the latter part of June with the annual strawberry supper.

NOTES.

Harry Bills' father died May 9. Mr. Bills was quite well known in Chicago, having lived there for over 25 years.

R. M. C. Rohlff, proprietor of the Alta Vista Nurseries, reports business late but far ahead of last year.

Tri-city florists are well pleased with the promptness in which the Florists Hail Association paid their claims.

A fire broke out in the home of Fred Bahr, damaging his residence to the extent of about $500.

John Staack of Moline, Ill., is on the sick list.

T. E.

Indianapolis.

A BUSY WEEK.

May has been a pleasant surprise in a business way; last week, especially, was an extraordinary busy one. Roses are still of very good quality and plentiful; carnations are not so abundant as they generally are this time of year. The light colored variety of Gladiolus nanus seems to be growing in favor for design work. With continued favorable weather the peony crop is expected to come right for Decoration day this year. High winds and a tendency to hail keeps the much tried owner of greenhouses on his mettle.

NOTES.

Chickens as a side line seem to be popular with the trade. Sidney Smith favors the barred rocks, and Carl Sonnenschmidt has a fancy strain of white rocks, while Fred Huckriede cultivates only the democratic rooster.

Alvin Schreiber, the head of the plant department of the Bertermann Floral Co., on May 14 completed 25 years with this firm. Mr. Schreiber was presented with a valuable gold watch.

Wm. Billingsley has sold out to W. Brandt and will remove to Seattle, Wash., early in June on the advice of his physician.

Fred Huckriede injured his hand severely and has been unable to be about for almost a week.

A. Wiegand & Sons received a carload of Holland grown stock, mainly palms and bay trees.

E. A. Wilson's houses are filled to overflowing with bedding stock.

J.

HOLLY, MICH.—H. J. Green is enlarging and making a number of improvements around his greenhouse on North Saginaw street.

PEORIA, ILL.—Nels Cole ejected S. Tranos rather forcibly from his store and the latter had him charged with assault and battery after accusing Mr. Cole's boy of stealing spoons from his restaurant. The jury was discharged without rendering a verdict May 6.

Washington.

LATE FROST.

While both official and unofficial hospitalities are on the wane, and preparations for going away engross many, there is always hope for something while Congress is here. A drop in temperature to 22,° a rather unusual occurrence at the capitol city at this late season, occurred this week. Peonies and other outdoor stock have suffered considerably. There has been considerable quantities of outdoor lily of the valley brought in, which was disposed of at very low prices in spite of the good quality. Easter lilies are plentiful, and it is hoped that there will be enough of them to supply the demand at Decoration day. There is an annual increase in the demand for bedding plants, and many orders have been booked for window boxes, a practice which is becoming more popular each year.

NOTES.

Marche & Co. are exhibiting some imported shrub novelties in their Fourteenth street store. They report fair trade at the up-town store. Aside from the regular supply of carnations and roses, Alex. Garden is bringing in great quantities of flowering shrubs.

J. H. Small and Sons executed the decorations for the Senator Knox dinner; the chief feature was a long table, the hollow of which was filled in with American Beauty roses and ferns.

The idea of a floral festival was born recently in the columns of the evening Star and the carnival project received the warm endorsement of all the public-spirited citizens.

John Robertson reports good business, being busy with landscape work, aside from his regular store trade.

W. W. Kimmell is doing a flourishing business in the landscape and window box line.

D. G. Grillbortzer of Alexandria is building two new rose houses, 45x280 feet.

Geo. C. Shaffer reports a busy week with funeral work.

Visitors: C. E. Meehan of Philadelphia and Hugh Ryerson of Newark, N. J. G. S.

Cleveland.

TRADE FAIR.

Business the past week has been fairly good. All kinds of stock are moving in fair shape, although some big sacrifices have had to be made to dispose of same. The variety is now getting larger daily. Fine grades of gladiolus and iris are being shown. Lilac still seems very scarce. The usual week-end bargain sales did not run up as in previous weeks. The opening of the new store of the Sterling-Welch Co. made quite a demand for American Beauty roses and other select stock. A little funeral work helped to move a big supply. Ferns, both fancy and dagger, are very scarce in this market. The usual small plants that are now shown at stores and markets seem to have the stage at present, as can be seen by the large number of baskets of pansies, etc., carried home daily on our street cars for the home gardens. The outlook for Decoration day is bright, as apparently there will only be limited quantities of peonies and other outdoor stock for that day, which will help the prices for indoor stock.

NOTES

A half dozen retail stores, both on the west and east sides of the river, have been the victims of parties who have been ordering flowers from $5 to $20 in value under the name of some orphan home. They would order the flowers by phone and then call for them. One retailer, however, became suspicious and followed one of these boys, who, finding he was followed, left his flowers on the car and ran away.

The floral display at the opening of the new store of the Sterling-Welch Co. was magnificent. Baskets of American Beauty, Richmond and Killarney roses were on all sides, with palms and ferns in profusion.

Fred Griffin, 5711 Euclid avenue, reports trade as very good, his rose sales in particular being exceptionally fine.

R. B. Hayes of Shelby was in town Tuesday. He has a fine lot of seedling white carnations.

Mrs. John Travers, 4920 Central avenue, reports trade as very brisk.

VAUGHAN'S SEED STORE, Chicago or New York.

Los Gatos, Calif.

One of the most attractive features of the recent carnival was the excellent exhibit of cut flowers, plants, wild flowers, ferns, etc. This exhibition was held in the pavilion in Carnival park May 1, and was large and varied. The premiums for this show were all cash, and were awarded as follows:

Carnations indoor.—Mrs. Chas. Holdman, first.

Herbaceous perennials.—Kettlewell, first.

Annuals.—Kettlewell, first.

Tulips.—Purdy, first.

Collection of decorative plants.—T. H. Stevenson, first.

Floral design.—Francis Floral Depot, San Francisco, first.

The design chosen by the last named company was a representation of Indians when they came to California in the early days in canoes. The canoes were of bark of African fiber, the balance of flowers and fern. Many good premiums were also awarded for amateurs and school children for wild flowers and flowers grown in the open air. P.

JAMESTOWN, N. D.—Fire, which is supposed to have originated in the furnace room of the Wheeler Floral Co., in the rear of the Dally Capital building, at an early hour May 2, destroyed property to the value of $2,000.

The Allied Trades

Descriptive particulars—with drawings or photographs, if possible—of any new apparatus or device which may prove helpful to the trade are solicited for this department.

John C. Moninger Co., Chicago.

The business of the John C. Moninger Co. has increased very extensively this year and the firm has found it necessary to add a large warehouse, 24x90 feet, which will contain three floors when completed. Some 49,700 square feet of land adjoining the present property has been acquired for a new lumber yard, the plant now fronting on all four sides of the square. The firm has on hand a very large stock of cypress and reports the outlook for greenhouse building better than ever, showing an increase of about 43 per cent over last year.

Greenhouse Piping.

ED. AMERICAN FLORIST:—

Please inform me how to pipe a house 42x133 feet, seven foot sides, four feet of which is glass and three feet cement, 18 feet 3 inches height of ridge, with steam. Returns all to be of 1¼-inch pipe. Would like to run one main pipe through center of house. What size would this have to be to heat house to 54° in zero weather and how many runs of 1¼-inch pipe would I have to use for returns? Can they all be in the side walls? I have one tubular boiler 42 inches x 12 feet high with 40 3-inch flues 11 feet long. Will this boiler heat this house and one other in which we have about 500 feet of radiation?

W. J.

To heat the house described about 1,200 square feet of radiation will be desirable. It would be well to run a 1½-inch main on each side wall and another through the center of the house, and use 15 1¼-inch returns. Four or five of these can be on each of the walls and the others distributed through the house. The boiler should readily handle both houses.

L. R. T.

FISHKILL, N. Y.—Geo. M. Russell is having a small boiler propagating house and a greenhouse erected on his property on West Centre street. It is Mr. Russell's intention to erect another house later in the season.

BUSINESS GOOD.

The cut flower trade here has been very good this season and all are well pleased with their season's business. Our gardens now are in all their glory, one mass of flowers. Business from now on will be on the decline, as the people are busy preparing to make their usual summer exodus to cooler climes.

The Horticultural Society took its annual outing to A. Alost's Rose Villa Sunday, May 2, when about 30 members, with Mayor Behrman as the guest of honor, had the pleasure of sitting down to a sumptuous stag dinner. The society, in appreciation of Mr. Alost's hospitality, presented him with a beautiful silver service, C. W. Eichling making the presentation speech. Mayor Behrman complimented the society very highly on its endeavors to assist the several commissioners in trying to beautify the city. As usual, Secretary C. R. Panter was toastmaster. Several speeches were made, and all returned home after a most enjoyable evening.

NOTES.

A. Alost has added two more greenhouses to his already large plant, as he has done a fine business in the plant and cut flower line.

The Metaire Ridge Nursery Co. has done well this season with American Beauty roses and Asparagus plumosus.

Francois Gruaz reports business good this season.

Jas. A. Newsham is doing well with his orchids. D.

Boilers, Tubes, Flues, Etc., at Wrecking Prices!

If you intend to increase the size and capacity o your greenhouse or make any repairs for the coming winter, be sure and write for our low estimate on your requirements before placing your order We have just purchased at a forced sale **50,000,000 ft. JOHNSTON HEATING CO., 138 E. 31st St., NEW YORK.

FLORISTS NEED SHOW HOUSES.

They look like business and they are business getters. An ice box may be all right for your cut flowers, but how about your palms and foliage plants—why not show them up attractively and give the public a chance to see what you have? But see that you build it right. Our Sectional Iron Frame is what Wilson, the Rochester florist, had us build this one of. He considers it a permanent paying investment.

LORD AND BURNHAM CO., New York. IRVINGTON, N. Y. Boston. Philadelphia. Chicago.

Why Not An Aquatic House?

This is an interior of one of the houses in the range at Mt. Holyoke College, in Massachusetts It adds a distinctive feature to a house, and opens up great opportunities for interesting effects.

This is just a suggestion, but why don't you have such an aquatic pool in the house you are going to build?

Write us and we will gladly help you with plans or suggestions.

Hitchings & Company
1170 Broadway New York

Pittsburg.

MARKET OVERSTOCKED.

Without the little spurts of funeral work, the market would be quite dead. Never in the history of the business has this market been so loaded. Peonies are coming in very poor and are moving slowly. Some very fine orchids, lily of the valley and gladioli are seen.

NOTES.

E. Ashcraft and Miss Rena Schulmire, both of the Pittsburg Cut Flower Co., were married Friday evening. They have the best wishes of all.

The McKeesport Floral Co. has placed a new manager, J. Johnson, in charge of its store.

Harry Hamm of Homewood is going to put a new plant stand on the market shortly.

Miss Lily Geib of the McCallum Co. spent Sunday at her home in Blairsville.

H. L. Blind, of Blind Bros., has returned from his trip through the east.

Pittsburg Cut Flower Co. is handling a quantity of southern iris.

The McCallum Co. is showing some fine Cattleya Mossiæ.

Our Supplements.

Subscribers should see that they get copies of the fine supplementary illustrations showing high grade design and decorative work. These fine supplements appear with each issue and should be carefully preserved, as they mean much to the retail florists in dealing with their customers, illustrating as they do the various kinds of work that the every day florist is called upon to perform

The papers in which the supplements appear should be likewise preserved, as they contain much valuable data with regard to these special illustrations. Subscribers should see that they get every issue, as otherwise they may miss some of this high grade work.

SUGGESTIONS FOR PLANT GROWERS.

Rubber Plants.

The extra room after the bedding stock has been taken out of the houses will give the grower a chance to pot young stock of rubber plants and repot any larger stock that may need it, spreading them out and giving them every encouragement to grow. Firm potting is best and the after treatment consists in keeping the leaves clean by occasional spraying and maintaining a moist, airy atmosphere around them. Old stock plants that have been standing around in the greenhouse all winter in out of the way positions will be benefited by exposure to the open air as soon as all danger of frost is past. A plant protector, where they may be screened from bright sunshine, is the best place for them.

Hydrangeas.

Hydrangeas rooted early as advised some time since will now be fit for potting. Plants with single flower heads in 5-inch pots are good sellers and, when needed, these early rooted plants will do well for them. Others may be potted about five in a 7-inch pot and will make elegant little specimen plants in good time for Easter. The treatment now needed is not to get a lot of useless growth into the plants, but to lay a good solid foundation for future usefulness by growing them cool and hard in any airy, light house. Give them lots of room so that the leaves spread out and do their part in building up well consolidated stems, these to be ripened later on by full exposure to sun and air. The point to work for in addition to this ripening is to get fine, plump buds on the end of dwarf shoots, as these, after a winter's rest, start up and produce large, showy heads of flower.

Primulas.

The recently sown primulas will be showing in the seed pans or flats. If the seed was fresh and good the plants will appear all, or nearly all, at once, but should they not do so and should the seed pans appear only very sparely filled, the grower need not despair, as often the seed comes up irregularly and the first seedlings are up and almost large enough to transplant before the latest ones show. In some localities primula growers are troubled with a lot of green scum on the soil, usually the result of using water in which low forms of vegetation exist. So bad was this in one instance that the writer was compelled to place a thin layer of sand on the surface of the soil after sowing and watering the seed. The seeds or spores contained in the water did not germinate so quickly in this material, and when they did eventually appear the surface was allowed to get a little on the dry side, the sand stirred and, by shaking the pans gently, the sand and scum were got rid of and more clean sand put on, first watering the soil. Such a precaution as this is only necessary in extreme cases, but is then very effectual. It is time now to sow the late batches of all these primulas for winter and early spring flowering. Sow in well prepared pans in a shady house or pit with a night temperature of 68° to 70°, dropping this to 65° by degrees as the seedlings appear. Good seeds of the finest strains of these flowers are expensive, but never sow cheap seed under any circumstances. It is sure to be old or of poor and worthless varieties, and the price that can be obtained for the finished product is more to be considered than that of the seed.

Poinsettias.

No more time must be lost in getting the old stock plants of poinsettias started into growth for cuttings, if good plants are needed. Remove the weak points of the shoots before watering and bring the plants up into a good light and a temperature of about 65° at night. Do not water the roots much at first, but spray the heads regularly to induce a free break. The plants need not take much room, as they can be placed close together and the cuttings removed as they become fit. Some growers prefer taking the cuttings when quite small with a thin slice or heel of the old bark, contending that plants from such cuttings are of a better habit than if allowed to shoot out and be cut off. They cer-

tainly have a tendency that way, but the matter is not so important as proper treatment afterwards. Whatever way they are taken, have some fine dry sand and dress the ends of the cuttings with this before inserting them, the sand having a tendency to prevent bleeding of the sap. Poinsettias strike freely in a brisk bottom heat with plenty of overhead moisture, but after they are rooted a much cooler and more airy position must be provided.

Azalea mollis will not usually need any cutting back nor will the Ghent varieties unless there are any extra strong shoots that spoil the shape of the plants. Many growers think these plants of no use after forcing once, and under the usual conditions of neglect they are not. But given this care at the beginning of the season's growth instead of at the end they are well worth saving and, owing to being well established in fall, will force more readily than newly imported plants.

PILLOW MADE OF ROSES AND LILY OF THE VALLEY.

Azaleas.

Azaleas will be perfectly safe outside now and the only protection necessary is a little shade, this being more necessary to the roots than to the heads, though a little shade, such as that cast by adjacent buildings or trees, is an advantage. Like heaths and other fine rooted subjects, the effect of the sun on the pots containing them dries up the delicate tips of roots that are the plant's principal feeders, leading to the foliage burning and poor development of the flower buds, and unless these are well developed at the apexes of the growth it is useless looking for flowers next season. An ideal place for them is in a plant protector, where a length of muslin can be run over them in very hot weather, the pots being plunged quite to the rim in ashes. In watering, the plunging material should be moistened as well as the roots, as this keeps up an agreeably moist atmosphere about them that is very desirable. For this reason the top of the ashes should be stirred over occasionally to prevent its settling down close. Spraying overhead with a good force of water from the hose is also a great advantage.

Forced Hardy Shrubs.

Any unsold plants of thorns, cherries, plums or other of the hardy shrubs should be cut into shape a little and either repotted and plunged outside or planted out for a season's growth. After the disturbance, should the weather prove hot and dry, water carefully for a few days and spray the heads daily, after which they will look after themselves. The plants of

The Indian azaleas hardly come into the category of hardy plants, but should be encouraged in a similar way to make a good growth now, this to be well hardened later by placing them outdoors in a semi-shaded position. Repotting is not often necessary in the case of these azaleas, feeding from the surface usually sufficing. Soot water is an excellent manure for these. Hybrid perpetual roses may be plunged or planted out just as they are to gain strength. The ramblers should have the flowering wood cut away and the new shoots that are starting must be encouraged in every way. If a bush shape is needed these shoots should be pinched, but if needed for training into any shape then they must be allowed to grow into whatever form is needed. These latter must not go directly into the open air and sun, but be protected by light shading for a time in bright weather and encouraged in every way to finish up a strong, vigorous growth.

THE RETAIL TRADE

GLADIOLUS AMERICA is again on the list of cut flowers and retailers will be glad to see this excellent variety.

WE shall be glad to have reports of Memorial day trade from all points and trust that retailers will favor us by writing early and giving full particulars.

The Pillow.

Probably there is no design so popular, next to the wreath, as the pillow. This can be made in a great variety, for, although the form is conventional and all frames are much the same in shape, there can be great difference in their appearance when finished. For out-of-town orders we prefer the single folding frame, under which the supports can be doubled up so that the box, to hold it in transit, is more convenient to handle. The single frame is the one without a top, having only the bottom or dish portion, on which moss can be placed to any height desired. This is bound on with a wire bobbin and shaped up according to the style ordered. As a rule it is best to moss quite high in the center, as this makes the most showy piece without taking much more material. Do not fill the bottom of the frame with bright tin foil. If foil must be used cover with the light or dark violet pattern, the color showing outside. It is better to line the frame with hardy ferns, or, after it is mossed and clipped, pin them all over the surface

PILLOW SHOWING EFFECTIVE USE OF CYPRIPEDIUMS.

RETAIL STORE WINDOW OF PENNOCK BROS., PHILADELPHIA, PA.

on top or bottom. This holds in any loose fragments, prevents the moss from showing through, should there be any scanty places, and furnishes a green foundation that requires less of the more expensive kind when finishing up the design. Too many box frames are seen in such patterns as wreaths, crosses, anchors and other set designs, in which the bright tin foil is very conspicuous, showing on the side as well as on the bottom or back if it is a standing piece. The box form we do not find necessary, as it only makes more surface to be covered up. If mossed carefully the single frames are the neatest and also the cheapest, as they cost considerably less.

Returning to the pillow, the first thing needed is a piece of paper, on which put down the cost of the frame and something for moss and ferns. Then make a list of flowers necessary for the job, with the cost price. If, when these have been used up, it is thought best to add something additional, be careful to see that the danger limit has not been reached. Work of this character made up without a careful accounting of the stock used is very apt to overrun the mark, and when flowers are scarce and dear it is hard to keep within the limit which will admit of the necessary profit. The fact that we are in business for profit is too often lost sight of in the desire to please this or that customer, or to turn out a nice piece of work without counting the cost. An order for a good-sized design is taken, and when completed the design is much admired by all, who feel that they have turned out something fine and realized a snug sum for the house. Now if an account of the flowers used, frame, cost of delivery, etc., is made, it will frequently be found that there is but little margin, as this feature had been overlooked, or the seemingly good price kept constantly in mind led to an extravagant use of material.

The accompanying illustrations show some of the variations in pillows to which there is really no limit. These samples were not made up to be photographed, but were orders and snap shots were taken of them. They are plain enough to scarcely need description, except that in one the small gypsy basket of single violets is not very plain and in another the center flowers are Cypripedium Lawrenceanum.

ROBERT KIFT.

A Handsome Window.

The accompanying illustration is from a photograph of the window of Pennock Bros., 1514 Chestnut street, Philadelphia, and is a fine example of what can be done photographically by a man who knows his business. Usually such a picture shows reflections of the artist and his camera or buildings on the other side of the street and there is usually no depth to it; there is no reflection here, however; in fact it looks as if the plate glass had been removed. The exposure was of 20 minutes' duration at 7:30 p. m., the illumination coming from the regular lights in the top of the window. This window is one of the beauty spots of Chestnut street, the retail street of Philadelphia. The firm does no other form of advertising, concentrating its efforts on the window displays, which are in the hands of Chas. Baxter, one of the employes, who has grown up with the business.

The feature of this decoration is an exhibition of hammered and hand worked brass goods, jardinieres, fern dishes, flower baskets, automobile and hanging vases and wall pockets. These are filled with seasonable flowers, snapdragon, lupins, gladioli, daisies, mignonette, orchids and lily of the valley. The floor of the window is covered with a loose plush, into which the empty pieces are placed to good advantage. The valance at the top of the window shields the electric lights from the eye, which is an important matter in the proper illumination of the window, as bright visible lamps always detract and interfere with the best view of the interior. This window is about 14 feet long by eight feet high and four feet in depth; is kept about as elaborately decorated as is shown here, each week being arranged differently with cut flowers or plants in season or made up baskets. Green or light blue velveteen cloths are used to cover the bottom framework of the window on the color effect desired. In the present instance the brass work, vases, baskets, ferneries, etc., are from the well known house of Bayersdorfer & Co., who are having a great run on this class of goods amongst their best trade.

K.

A Floral Pillow.

SEE SUPPLEMENT WITH THIS ISSUE.

Memorial day tributes to the departed often take the form of a pillow of flowers, usually with some appropriate lettering, and it is a design which the retailer may frequently be called upon to furnish at this time. Looking at the finished article one may think the pillow an extremely easy design to make and so it is. But to make a design stiffly and flat is one thing and to get the best results possible out of it is another and a very different one. From the nature of the design there must be a certain amount of formality in the outline but this need not be hard or heavy if the right kind of flowers and green are used and used tastefully.

White roses, irises and Asparagus Sprengeri make a very effective pillow, the asparagus points standing well out and lasting well. Sweet peas are also suitable if handled with care but there is too much of a disposition to crowd these flowers in bunches in such designs. Half the beauty of these flowers is lost in such cases unless the outline of each flower is seen. Lily of the valley, as we have already pointed out on more than one occasion, is an exquisite subject for the outlining of any set piece and should be used with its own foliage if possible. In short there are plenty of flowers that can be used for a design of this kind and if it is well carried out it almost always gives satisfaction to customers.

May Flowers in the New York Stores.

It is possible for a devotee of the noble art of horticulture to forget, at times, that flowers are commercial factors; to forget the varying interests that sometimes clash over the question of percentage, and take the position of the fond lover whose affections are centered on an object, personal or impersonal, which he loves for itself alone. While in the daily routine of business we cannot get away from the commercial side of the question, we believe that there are times when all of us, so far as possible, should put that feature aside and view the flowers solely on their merits in which they make for beauty and happiness.

Though the orchids have not been as plentiful as at other times there has been enough to supply the demands of the trade and extraordinarily beautiful specimens of cattleyas are frequently seen. We think it appropriate to mention here any new device that will show these grand flowers to the best advantage. The well known supply house of Reed & Keller has recently perfected an invention for the better display of orchids and other decorative flowers when used as centerpieces in table decoration. It is in circular form and of beautiful workmanship. At even distances in the circle there are perforations in which the flower glasses can be placed instantly. This gives an even and artistic arrangement of the blooms. If something very elaborate is desired a vase of flowers or a pan of flowering plants may be placed in the center.

In writing of roses in general, nobody can afford to ignore American Beauty. We believe it is now about 25 years since George Field of Washington, D. C., disseminated this rose. Since that time, though many roses have come and gone, though much valuable space has been devoted to exploiting several varieties that are now "dead ones," American Beauty, in our estimation is yet in a class by itself and at the head of the procession. In thus writing, we are mindful of the fact that the American Beauty, for some purposes, is not as useful as others, that it has not the delicate shading of some of the tea roses, but for

display purposes, for substance, and the qualities that endure, it as yet has no equal. We cannot, in a long experience, recall a month of May when American Beauty has been more prolific, beautiful or been shown to better advantage than during this present month. In writing these comments we have previously expressed the opinion that the epitaph of several of the once popular roses would soon be written.

Alaska-Yukon-Pacific Exposition.

Native Growth and Planted Rhododendrons.

We have experienced no change of faith.

For the past year the decadence of Bridesmaid's popularity in this market has been marked. Within a week a man about town advised a leading wholesaler to devise means for turning his Bridesmaids into attar of roses. That, of course, was intended as a joke but it was a joke with a moral. Richmond is easily disposed of from the fact that, from the beginning of warm weather, it is not in the race. As to Killarney it must be acknowledged that it has obtained a strong hold on the affections of rosarians. It is popular with women of taste and culture, a virtue that at all times has covered a multitude of defects. While blooms of White Killarney are being sold in this market, it is as yet not sufficiently well known to arrive at a fair and impartial estimate of its popularity with the flower-buying public. We can only say that it looks good to us and we have no reason to change our previously expressed opinion that it will be the white rose of the future.

Though the pink variety, Kate Moulton, has been before the public for some time, its introduction to the trade of this city has been tardy. A leading rose grower, a man who only takes up good things, has recently taken up the culture of Kate Moulton, shipping his stock to Traendly & Schenck, of Twenty-eighth street. From what we have seen and heard of this rose, we are satisfied that its popularity will increase as it becomes better known. Another pink rose, named Enchantress, but which has never yet been disseminated, is being handled by the above mentioned firm and from the favorable comments that have been passed on it we judge it has a future.

Though many of the carnations are showing the effects of heat, many good blooms may yet be seen. Enchantress is still a popular flower and no variety that is generally known to the public can compete with it. Mrs. C. W. Ward and Alma Ward are even now grand flowers. We are not dogmatic in our opinions, but again express the belief that it is a mistake that these two varieties have never been disseminated. In the hands of growers who understand its culture, Genevieve Lord is now an attractive feature in the carnation family. Thanks to the enterprise of the Julius Roehrs Co., of W. H. Siebrecht, Anton Schultheis and a number of other growers, this market is now constantly supplied with a good quality of lily of the valley. At present, in addition to this supply, a considerable quantity of the outdoor product is coming in. The stocks may by some be considered old-fashioned flowers, but their profusion and beauty at this time is worthy of comment. A proportion of singles seems inevitable, but we have now splendid blooms of double white and pink. For mixed bouquets, or even for window display purposes, the value and beauty of these flowers cannot be ignored. Our old friends, the sweet peas, are ever with us and each season shows some additions to this sturdy and prolific family.

FLOWERING PLANTS.

In the spring the fancies of the good housewife, the suburbanite and some other people, seriously turn to thoughts of flowering plants. The window boxes, the verandas and the little home gardens are in mind in this month of May. Plants are plentiful and are being sold at figures that place them within the reach of even humble pocket-books. Rose plants in variety, hydrangeas, both pink and white, spireas, as well as others of the larger pot plants are readily found. Of the geraniums, fuchsias, marigolds, candytufts and smaller bedding and window-box plants, their names are legion, and they find a ready sale.

Alaska-Yukon-Pacific Exposition.

THE LANDSCAPE FEATURES.

The illustrations accompanying this note show portions of the grounds of the Alaska-Yukon-Pacific exposition, soon to open at Seattle, Wash. The artificial portion of the work has been costly and well planned but independent of this the natural setting of the exposition is, beyond all question, one of the finest that could possibly be chosen for such a gigantic show. Surrounding the exposition grounds is a forest, and much of the natural verdure has been left. The formal gardens approaching the manufactures and agricultural palaces are similar to those in the public parks of Versailles and are French in design. The first consideration has been the landscaping, floral display, illumination and sculpture. This, combined with the mild climate of the Puget Sound country, the beautiful mountains, lake and woodland scenery and the central location of the grounds will result in the Alaska-Yukon-Pacific exposition being one of the most beautiful and attractive ever planned.

GROUNDS OF THE ALASKA-YUKON-PACIFIC EXPOSITION.

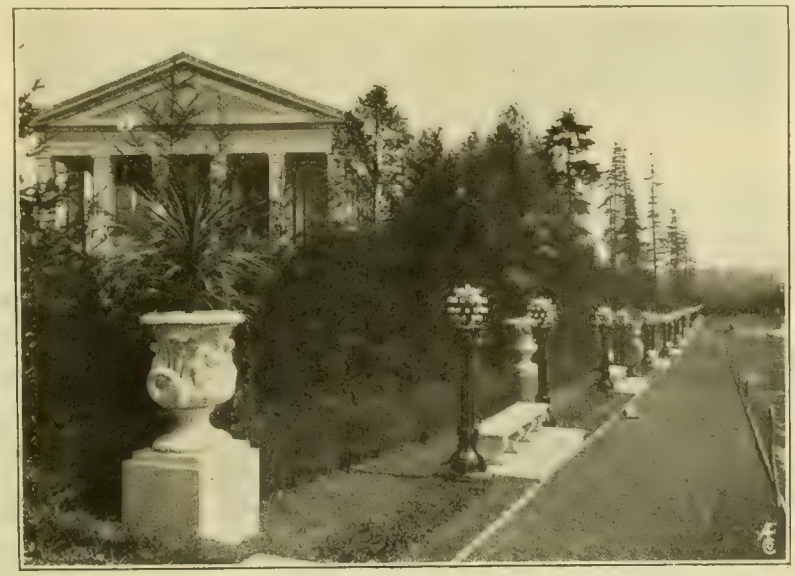
Formal Gardens, Rainier Vista and the South Gate.

In the greenhouses owned by the exposition company are more than 1,000,000 plants of every description to be used in beautiful floral designs and sunken gardens. When the exposition opens, climbing roses, geraniums, rhododendrons, cactus dahlias and many other varieties of flowers will be found massed in profusion about the big structures, giving forth color and perfume from every conceivable nook and corner.

Standing by the Cascade fountain in the exposition grounds and looking a little east of north down Rainier avenue there is what at first seems like a frozen fog on the horizon. It is Mt. Rainier, the highest peak in the United States proper—including Alaska—and is in reality a great snow and ice-clad volcano 14,529 feet in height, finest of all in beauty and stateliness. In winter and early spring the great mass of the mountain is pure snow, but in midsummer the green of the ice begins to show through the mantle in irregular streaks as the snow melts and the eternal glaciers stick their fingers our for a fresh recognition of their supremacy. The great white and green mass which fronts Seattle is in fact the tremendous Carbon glacier, and rising from it is the sheer ice of Willis wall—an ice precipice 5,000 feet from bottom to top.

A little to the west, but still looking south from the central basin of the exposition grounds, there rises another beautiful, snow-clad, conical peak. This is Mt. St. Helena, also discovered by the Van Couver expedition in 1792, and named after a former British ambassador to Spain. It is much further distant—some 20 miles—and is also about 500 feet less in altitude and therefore seems a pigmy alongside Rainier, yet it is one of the notable mountain peaks of the North American continent. Looking off to the east and a little to the north of the same position one finds the horizon barred by the rugged tops of the glacier peaks of the main range of the Cascade mountains. All along in this direction the foothills and summits of the Cascades form the skyline at a general altitude of about 8,000 feet, but in this particular patch the sky is pushed up a thousand feet or more by three great mountains.

The forestry building will be the largest log house ever built, and about the front of the structure will be 124 logs, each 40 feet high and containing 6,000 feet in board measure. The weight of each one of these logs is estimated at 50,000 pounds. The logs used in the exterior of the building are being left in the rough, while those used in the interior will have the bark removed. The landscape and scenic effects alone will, in short, amply repay anyone interested for the time spent in a visit while the educational effect along varied other lines in such a gigantic exposition is incalculable.



GROUNDS OF THE ALASKA-YUKON-PACIFIC EXPOSITION.

Detail of the Landscaping; Music Pavilion to the Left.

Lincoln Park, Chicago, in May.

To be thoroughly convinced of the value and utility of the parks to a city like Chicago such a fine May Sunday as the first day of the present week should be chosen to visit them and note the thousands of health and pleasure seeking citizens of all ages that are making the best use of them according to their own individual tastes. About the golf, tennis, baseball, boating and other pursuits we need say nothing but the horticultural end alone attracts many thousands on such a day, when all the great outdoors seems in sympathy with the joy of living that is expressed in the countenances and actions of the visitors. In Lincoln park the tulips in the flower garden were at the height of their beauty and make a much finer display than last year. The varieties have been well chosen so as to flower simultaneously and make a glorious show and many are the expressions of delight heard from young and old.

MAY TULIPS.

Where all are good it is difficult to single out any for special mention, but three tulips would seem to stand head and shoulders above all others as May bedders, Keizerskroon, Coleur Cardinal and King of Yellows. Keizerskroon is a rather tall grower, yet

standing all kinds of rough weather, with the flowers bright red so deeply edged with yellow that at a little distance this seems to be the predominating color. Coleur Cardinal is the deepest vermilion with a lustrous almost black shading on the outside of the petals. It is a superb tulip. King of Yellows is a pure self yellow and one of the best. There are several large beds of each of these now in the best of condition and those interested should not fail to pay a visit while they are at their best. The older Vermilion Brilliant is like Coleur Cardinal but not quite so showy, though the bulbs have come up and flowered very regularly. In whites there are fine beds of La Reine and Joost von Vondel. The latter is a little early in comparison with the above named, the former just right and a splendid tulip for the purpose. Cottage Maid, as usual, is a delightful bed, the soft pink shading on the white ground being perfect. Besides these there are many large beds of mixed varieties, a few hyacinth beds and some excellent pansy beds that make a very fine display.

The herbaceous borders are of great interest, now that the earlier species are in flower and the later ones throwing up characteristic growths. Two native plants in bloom now are Trilliums and dodecatheons, both flowering finely. Ornithogalum nutans is also flowering, the lily of the valley is almost out, while the pretty little muscari or grape hyacinths, white and yellow, are at their best. Arabis alpina, Alyssum saxatile, some of the dwarf phloxes, pansies and primroses of the polyanthus order are fine in the front of the borders while the summer snowflake, Leucojum æstivum, is also in flower. There are still a few narcissi left and some of the finer tulips are coming in line, soon to be followed by peonies and other summer flowering occupants. The shrubbery is fine in its fresh green, the double almonds, bird cherry, Pyrus Japonica and others being in flower.

THE ORCHIDS

Orchid fanciers will find much to interest them now in the conservatories and they should also get permission to visit the growing houses where there are numbers of rare and little known species in flower. Among the showiest kinds in flower are Cattleya Lawrenceana, a very fine type of this showy species, good C. Skinneri and Skinneri alba the well known C. Mossiæ and the old C. maxima. However much this species deserved its name when introduced it seems out of place now when we consider the many grand flowers of the labiata section. C. Prince of Wales has pure white sepals and petals with pale rose and yellow lip markings and has evidently some Loddigesi blood in its veins. C. Schilleriana is distinct and the only yellow cattleya, the sweetly scented C. citrina, is nicely in flower. Among the lælias are several hybrids including the showy L. Latona, good forms of L. purpurata and L. majalis and several others. Odontoglossum citrosmum is well done here and many fine plants are now in bloom. Among the dendrobiums are such species as D. primulinum and D. purpureum, while

The Cactus Dahlia.
Floral Emblem of the Great Seattle Exposition.

the pretty and distinct Cypripedium caudatum is also well flowered. Among the lesser known kinds we noted the singular Bulbophyllum barbigerum, a flower that the slightest puff of air sets in motion and a very interesting botanical curiosity; Oncidium ampliatum is just coming into flower; Ansellia Africana is showy and there is a small plant of the foxbrush orchid, Aerides Fieldingi, Leptotes bicolor and many cypripediums. The cattleyas in the growing quarters look well and the phalænopsis are improving, P. Luddemanniana being in flower.

There is a grand display in the conservatories of all kinds of flowering plants, azaleas, gloxinias, calceolarias, anthuriums and rhododendrons in great variety. Amaryllis is evidently given some attention and a number of excellent varieties are in flower. The pelargoniums are always good here and are just at their best, while the large baskets of fuchsias, the bougainvilleas and other flowering vines on the roof and the great variety of foliage plants make a splendid show. The ferns and palms are in good condition and all through the growing houses are large stocks of bedding and other plants being prepared for use in the flower garden.

THE CARNATION.

Planting in the Field.

The planting in the field of the young stock should receive attention now. The cold, wet weather has delayed outside planting considerably. They should be planted out without any further delay. The coming two or three weeks is usually a good time for the plants to get root hold and well established in the ground before the very hot weather sets in. The system of setting the plants and the arrangement of the planting ground depends greatly upon the amount of space at disposal. In cases where a large number are to be planted the best arrangement, according to our experience, is to set the plants 14 to 16 inches apart each way. This leaves ample space for working between with a hand cultivator, for keeping down weeds and loosening up the surface soil, but it must be borne in mind that close planting makes it necessary to work the ground thoroughly from the time the plants are set out to keep ahead of the weeds before the plants attain any size, after which it will be difficult to work between them without doing some damage.

Growers handling only a small number of plants and with a limited amount of space at their disposal can plant 10 to 12 inches apart and depend on using the hand hoe to keep the ground clear of weeds. But the distance of setting the plants apart in the field should be governed greatly according to the time of planting into the houses. If early planting is the method followed, beginning to plant inside in July, then closer planting can be followed than if the plants are left out in the field until the middle of August or later, by which time they will have become very large under ordinary circumstances and, if planted too close, difficult to care for properly. A very important point to bear in mind when transferring the plants to

BED OF TULIP COLEUR CARDINAL AT LINCOLN PARK, CHICAGO.

the field is to watch closely the drying out of the roots. It is a mistake to knock out of pots and take outside more than the planters can take care of close up. See that none are planted with dry balls of earth at the roots as it takes considerable time for the roots to get away from these.

When the young stock has been growing in flats or benches of soil be sure they are given a good watering beforehand so that in lifting a good ball of soil is left attached to the roots. If for any reason, such as scarcity of stock, cuttings are taken from the sand or from soil in which they have not had time to become thoroughly established and planted direct to the field, it will be necessary to watch these particularly close for about 10 days or until they have taken hold of the ground. They may need a watering once or twice to give them a fair start. Deep planting should not be resorted to but the balls of roots must be properly covered so that there is no chance of them becoming bare with washings from heavy rains. It is also a good plan to run the cultivator over the ground directly after planting to open it up so that it will not bake and as quickly as the plants are established in the field and new growth commences, pay close attention to topping back the shoots.

C. W. JOHNSON

WITH THE GROWERS

Bassett & Washburn, Chicago.

The stock at Bassett & Washburn's plant at Hinsdale is in excellent condition and large quantities of fine flowers in all lines are being cut. Summer roses are always a feature here, Kaiserin being grown on solid beds, especially for summer use in houses that are allowed to fall below freezing point in winter, thus insuring a thorough rest. The plants naturally throw up with great vigor in spring and one crop of fine flowers has already been cut, another being under way. The shoots are remarkably fine, the flowers of great substance and the plants generally in the best of condition. The same is true of the American Beauty plants grown in solid beds for the same purpose, these being in good crop now and looking very happy.

About 16,000 young plants are already in the benches and a large number of cut backs have also been planted. House after house is in excellent crop, not only of Beauty but of Killarney, Richmond and all the popular kinds. White Killarney is being tried out this season, 5,000 fine strong plants of this much talked of rose being already in the benches. It is evidently quite as good as, if not a better grower, than its parent and too much has been already said about it other ways to need further mention here. Shipping trade has been remarkably good here this season, large numbers of pot roses and rooted cuttings having been sent out. Killarney is also being largely grown here in solid beds with very satisfactory results.

No mention of this plant would be complete without a reference to O. P. Bassett carnation. Already 200,000 have been shipped, not only to growers in this country, but practically to all parts of the world, the demand for it being quite extraordinary. There are still large numbers of it here for home planting in the houses, and the field as well as fine stock of White Enchantress, Enchantress, Winsor and other popular kinds. Some 50,000 have already been planted and there are still many more houses to plant for summer culture inside, besides, of course, the large amount of field-grown stock. Respecting the latter, at the time of our visit field planting was in progress and the stock being transferred to the open was in great shape, fine stocky, sturdy and well rooted plants of which any grower may be proud. About 125,000 are planted annually as well as large quantities of asters for cutting.

Of lilies there will be a good supply for Decoration day and somewhere around 10,000 cold storage Giganteums are being grown for summer use. There is not much else to be noted in a general way, though many interesting points were brought out in a trip around the place with Andrew Benson, the capable foreman here. The many mechanical devices around the place we have noted before in THE FLORIST, but the system of ice storage and cool room is worthy of note. We have already noted the pond from which about 200 tons of ice are cut annually. This is stored on a floor over a cellar in which the flowers are cut and the bulk ice serves the purpose of keeping this room at an even temperature all the year around at no cost, as it must be stored somewhere. As an instance of a most successful catch crop a house of sweet peas must be mentioned. Chrysanthemum stock plants were taken out of this house in February and sweet peas sown and now in less than three months from the date of sowing is a magnificent house of sweet peas from which many hundreds of dozens will be cut for Memorial day and after. Many, in fact, have already been cut and the house will be cleared again in plenty of time for chrysanthemum planting. This structure is not a particularly up-to-date or elaborate one, but it certainly should prove a profitable one.

CHRYSANTHEMUMS

Notes in Season.

It is time to repot the plants being grown on for exhibition specimens. They should now be in vigorous growing condition and ready for 10-inch pots. At this potting they require a live, rich compost and should be potted firmly. The pots should be thoroughly cleansed, both inside and out, and plenty of drainage put in. A little coarse material should then be spread over the crocks. The soil for this potting should be rather coarse and consist of one part well rotted cow manure to two parts soil with a good sprinkling of ground bonemeal added, about a 4-inch pot to two bushels of soil. It will be necessary to water sparingly until fresh root action takes place and guard the plants against cold draughts. As quickly as the plants get into active growth again the work of topping back the shoots will need constant attention, the size and form of the specimen depending greatly upon this part of the work being followed up closely.

It is also time to give the stock intended for benching a little attention and if the quantity on hand or in prospect does not come up to requirements to make arrangements to fill them. There are a few of the new commercial varieties that showed great promise last season and are in great demand, particularly the following: Golden Glow, Virginia Poehlmann and Pacific Supreme, an early yellow, white and pink. Get in all the stock needed of these varieties also note that the paying varieties are those of proven lasting qualities. If there were any among last season's stock that fell short of expectations along these lines, dispense with them and stock up with some live ones. Another item is to figure a little on the colors for commercial purposes. Not nearly as many pinks as whites and yellows are necessary and but a small proportion of reds and bronzes. There is a very active demand in a retail way for plants of pompons and singles and these should not be overlooked when figuring on the

plantings particularly in the case of those who retail a part or all of their productions. The well trained exhibitor no doubt made his selection of new additions for exhibition purposes at the fall shows and by this time has his plants well under way. The beginner should send a list of his requirements to the chrysanthemum specialists and let them recommend and fill up his wants.

C. W. JOHNSON.

Two Enemies of Black Aphis.

Within the last few days we notice the lace-winged fly (Crysopa oculata) has put in its appearance for the season. This little insect is a foe to the aphis, being exceedingly greedy and exceptionally active in its search for food. In the larval state it will be seen traversing the young shoots and leaves where the aphides are usually most abundant. When within reach it seizes its prey with the two horny, jaw-like appendages to hold it secure and then thrusts its proboscis, or bill, into the aphis' body extracting the juice the same as the mosquito operates on the blood of animals. As soon as this operation is completed the lifeless shell is released and the larva proceeds to the next victim.

The fly which, in the mature state, is a peculiar shade of light green, approaching opalescent tints, entirely except its golden eyes. It is about one inch in length and its large wings are reticulated with a network of ribs to strengthen the thin and transparent tissues. This lace-like reticulation is the source of the common name "lacewing." The larva is one-half an inch long and nearly or quite black in color. Its cannibalistic tendency is so marked, even when first hatched, that nature, to protect the unhatched eggs, has provided that they be deposited on slender thread-like standards out of its reach. Another insect we never intentionally molest for its like habits is the lady bug. The bugs vary in color but are usually a shade of red with black spots, and are rather less than one-quarter of an inch in length. In both the larval and mature state they feed upon aphis. The larva is not as slender as that of the lacewing and the color is a bluish gray with a few small spots of red. ELMER D. SMITH.

The Qualities of a Peony.

In considering the qualities of a peony, color and form are of the first importance. Freedom of bloom is also an important feature, for some varieties, while of good form and color, are such shy bloomers that they are from this quality not desirable for the general cultivator with few varieties, says Robt. Tracey Jackson in a paper read by him before the Boston Gardeners' and Florists' Club. Extra freedom of bloom, on the other hand, is a feature especially desirable. One other point of much importance is strength of stem. Many fine peonies have such weak stems that they flop over hopelessly from their own weight; others stand erect, thereby developing their flowers much better, and showing off to infinitely greater advantage in the garden. Lasting qualities, both on the plant and as cut blooms, are features of importance, especially to the dealer in cut blooms.

Dahlias Unsatisfactory.

ED. AMERICAN FLORIST:—

My dahlias are very unsatisfactory and fail to bloom. The flower buds seem blasted either by insects or some other agency and they do not open. Can you tell me what is wrong and advise me what to do this season?

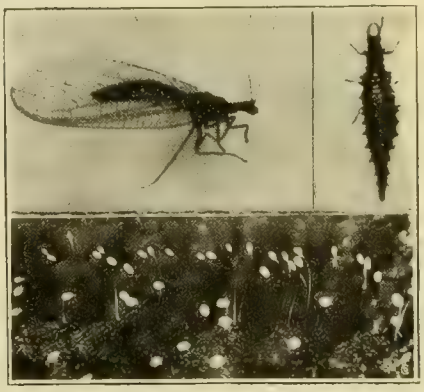
Kansas. E. R. B.

In reply to "E. R. B.," the symptoms given would indicate the presence of the tarnished plant bug. (Lyrgus pratensis). This is the most destructive insect with which the dahlia grower has to contend. Being

The Lady Bug. (Much Enlarged.)

a sucking insect it is immune to poison. It is also a very shy insect, seeking cover at one's approach. The young insect is green in color changing to brown at maturity when it is slightly smaller than the common house fly. It is readily distinguished at all periods of growth by a perfect triangular marking between the shoulders. Its work is to puncture the young shoots and buds, sucking the sap for food. Buds so punctured generally turn yellow and fall and never make perfect flowers.

We can suggest but little in the way of remedy, thinning the foliage if dense will help, but the tedious task of hand picking and killing is the surest. It may be that "E. R. B." has another trouble, that is common to dahlia growers, that of too much manure. This will sometimes run the plant too much to foliage and rob the



The Lacewing Fly.

Mature insect, larva and eggs.

bud of its strength. If it is a case of insects there may be no trouble this season as this particular insect is not always present; some seasons it is not noticeable and rarely ever does it trouble a plant if it can once be brought into full bloom.

W. W. WILMORE.

To Be Done Now.

IN THE GREENHOUSES.

Keep up the watering and, to some extent, the feeding of pelargoniums as the flowers develop and watch for greenfly.

Remove the old flowers and seed pods from rhododendrons and azaleas as they go out of flower; they rob the plants if left.

After the large plants of genista are over and before much new growth is made cut them into shape with the shears and repot them, using rich soil and potting firmly.

Stock of all kinds is growing very freely now and must be given a new stand frequently.

Avoid spraying the heads of maidenhair ferns heavily but keep up a moist atmosphere.

Fuchsia gracilis is very beautiful now and should be made a note of for propagating. It is excellent for conservatory groups.

Shading will be necessary from now on for cyclamens but the light must be kept out as little as possible.

Cut back old winter flowering geraniums and repot after they have made a little new growth, reducing the balls of roots and getting them back into smaller pots.

Continue to look well after the old rose plants. They will be the only money makers for the next four months.

A mild hotbed on a greenhouse bench that is not otherwise used during the summer will be very useful for propagating after the heat is turned off.

Keep a bright lookout on American Beauty roses now for red spider. The first indications in the ordinary way are light, yellowish spots, but by the time these are seen the spider has become established.

OUTDOORS.

Plant out stocks before they get hard in the pots or flats or the flowering season will be short and unsatisfactory.

A quick change must be made from the bulb beds to summer bedding if the latter is to have time to get well established before the hottest weather sets in.

A sprinkling of bone meal and nitrate of soda is a good stimulant to worn or thin places on the lawn.

Be sure that all tomato plants are thoroughly hardened before planting out and avoid watering late in the day until all danger of frost is past.

Plant out bulbs of Lilium lancifolium and its varieties that have not been heavily forced. Many of them, after a season's growth in the open, will force again.

A screen of very light cheese cloth raised a few inches above the cabbage seedbed is a great protection against flying insects.

Propagate pansies regularly now every few weeks by inserting cuttings in a cool piece of ground lightly shaded.

Constant hoeing has many advantages besides keeping down weeds. It disturbs insects and kills many as well as assisting the growing crops.

Where blackberries are lying close to the ground raise the old stems a little in order to keep the fruit off the ground later.

Straight lines may not be beautiful, but where bedding out calls for them let them be perfectly straight or regularly curved as seems desirable. Carelessly planted they are very unsightly.

OSWEGO, N. Y.—E. B. Snow has opened a retail store on Broad street.

GARDNER, MASS.—The greenhouses on the grounds of the late E. Murdock, Jr., were sold by auction May 17.

OBITUARY.

Charles Linnaeus Allen.

It is our painful duty to record the death of the venerable Charles Linnæus Allen, which occurred at his home in Floral Park, N. Y., at noon May 21. Mr. Allen was well known as a seedsman and florist. He was born at Springport, Cayuga county, New York, over 80 years ago. His father was a botanist and a lover of flowers and these traits were, in a large measure, transmitted to the son. Many years ago Mr. Allen was in the seed business on Fulton street, New York, and for a time was a resident of Brooklyn. He later moved to Floral Park, where for the past 20 years he had his home, seed farm and greenhouses. He was not only a practical seedsman and florist, but a student, and a prolific writer on horticultural topics. He was a member of the American Institute of New York and was for years one of its board of managers. He was also a member of the Horticultural Society of New York and his contributions to the literature of these organizations has been interesting and valuable. He is survived by two sons, William Stewart Allen, a well-known wholesale cut flower dealer in New York, and Charles H. Allen, a grower of Floral Park. His wife died about two years ago. The funeral was held at the family home May 24.

So far as we are aware, the last of Mr. Allen's literary labors was the preparation of a paper on "Plant Development," which was read before the New York Florists' Club May 16, and published in THE FLORIST of May 22. At that time he was too ill to attend the meeting, but prepared and sent the paper. On his eightieth birthday, June 13, 1908, a company of friends, children and grandchildren, gathered around Mr. Allen to congratulate him on the event. He read an address entitled "At Eighty," from which we give the following extract, in which he refers to a serious illness which he had just passed through: "Perfect confidence and trust in the Creator, with intense admiration of His every gift, was sufficient assurance that death is as essential as life, and as beautiful—perhaps more so—and that all would be well, no matter what the result might be."

Peter Bauscher.

Peter Bauscher of Freeport, Ill., died May 15 at his home on Adams street. Mr. Bauscher was born in Germany in 1829 and came to this country in 1853, going into the gardening business at Freeport with his brother some time after. This business he carried on until about 12 years ago, when he retired, and the business is now carried on by his son Louis. Mr. Bauscher was well known in Freeport and vicinity being a considerable land owner, Bauscher's addition to the city being his property and named for him.

Hugo Beyer.

Hugo Beyer, of New London, Ia., died May 18 at his home near this city. Mr. Beyer was a native of Germany and has done much good work in horticulture especially with the perpetual flowering raspberry and other fruit plants. Mr. Beyer's wife died some years ago and since then he has lived alone except for his plants in his little home four miles north of New London. He is survived by two sons.

John Cassidy.

John Cassidy, founder of the business of Cassidy & Sons, Long Island City, N. J., died May 18. Mr. Cassidy was a native of County Tyrone, Ire., and came to this country as a young man. Although in his ninety-eighth year he managed the business up to the commencement of his final illness.

Japanese Nurseries and Methods.

It must be borne in mind that the climate of Japan is very much like that of the United States. Though the country is small in area from northeast to southwest it extends 1,500 miles. Within these north and south limits are to be found the mild, semi-tropical climates like that of the gulf coast country, and the colder regions of the northern parts of the country. In the plant growth these differences of temperature and climate are very marked. Hence from Japan, according to S. Arai in a paper read before the State Horticultural Society at Brownsville, Tex., comes such a richness of fruits, ornamentals and flowers for this country.

In Japan are to be found over 100 varieties of oranges. As yet very few of them have found their way to this country. The most notable ones are the Satsuma and the Dugat, the latter variety named from the man who first grew it

The Late C. L. Allen.

in Bee county. Its Japanese name is not known here. In fact as yet it has not been fully identified among the Japanese varieties. The former belongs to the Mandarin class, while the latter belongs to another class. Within the limits of this paper a history of these or any other oranges as to origin cannot be gone into. More attention must be given to the methods of propagation and culture of the nursery stock, larger quantities of which are now coming to this country to supply a most remarkable demand for orange trees.

Here it may be said that the supply of trees for export from Japan for this and the next year is practically exhausted. The past year was a rather hard one on the Japanese farmers and they sold, at close prices, all the stock they could furnish of both Citrus trifoliata and one and two year old Satsumas. So that for next year there cannot be had very many trees for export to this country. In another year the supply of C. trifoliata will be replenished and so there will be plenty of trees to be had again.

Japan is a very small country for the population it has. It has been inhabited a long time. Naturally competition in such a country is keen. Only the fittest in business survive. It takes generations, even centuries, to build up businesses. This is true of the nursery business. A reputation is necessary for existence, and this takes many years to build. For hundreds of years the same families have been raising nursery stock. There are certain species of ornamental plants that are and will remain the property of certain families, and it has taken hundreds of years to develop them.

To be a successful nurseryman in Japan is, therefore, by no means an easy thing. Long experience is back of the Japanese nurseryman, and he and his employes are all experts. Necessity forces them to become so. They are progressive, also, and are not slow to try out and develop new methods. The Japanese nurseryman regards a loss of 5 per cent of trees in grafting as a big one. In budding, the percentage of buds that do not grow is somewhat larger. Also the nurseryman knows his ground and his trees well and must get the very best returns he can from the ground he has to utilize.

He selects for his nursery rather poor soil. In poor soil the roots must forage for substance, and the quantity of fibrous roots sent out in search of plant food is much the greater. When he then uses fertilizer about his young plants, as he must do, the effect is to make a very fine root system. Further, he transplants frequently, and cuts back the longer roots, of course, and this tends to make a fine root system. It is all right to plant the tree in rich soil if it is to stand there, but if it is to be taken up and transplanted it is far better to have the trees grown in poor soil for the reason given.

In the case of Citrus trifoliata they graft much more than they bud. This is done because as the stock becomes older, and they use older trees, the bark becomes harder and budding is more difficult. In the case of other trees, like the peach and plum, where budding is done earlier, before the young stock hardens, the bud is used rather than the graft. No trifoliata stock is used until it is two years old and has good roots.

The government exercises a close supervision over the nurseries. The chief of the Sapling Guild, as he is called, of each district or county, as we call them here, is in charge, and he sends an inspector when application is made for one on taking up the trees in the fall or winter. All trees must be fumigated before shipment, and for this purpose a special house is built. Fumigation in this house is done under the direction of the inspector, and on his approval the trees may be sent out for shipment. But there first must be with the trees a further certificate that there has been no epidemic disease of any kind in that district within the past three months.

Also the Japanese prefer to use budwood from older and bearing trees. H. Harold Hume, the eminent authority on citrus fruit horticulture in Florida, says that it has little or no bearing on the early or later fruiting of the trees. Nor indeed are there any grounds for thinking that it could make any difference. The reason for using budwood from older trees is that it is more symmetrical. The young twig of the orange tree has a tendency to be angular, and as the tree becomes older the twigs become more symmetrical and so the buds are better for use.

The growing of citrus fruits in Japan goes back to time that history does not record. It has been studied and nothing left undone to make it as profitable and as stable an industry as possible. With long years of training and with generations of training behind them, the nurserymen of Japan should understand how to make good trees. They should be good horticulturists. That they are is shown by the wealth of variety of fruits and ornamentals they have contributed to the rest of the world.

THE observance of Mother's day has spread to Canada as shown by numerous references to it in local papers.

THE declining demand for immortelle and metal wreaths is surely a sign of improved taste, and it means a greater call for genuine flowers and plants.

Profit in Sweet Peas.

ED. AMERICAN FLORIST:—

Not having grown any sweet peas indoors for a midwinter crop before, I felt a little shaky last fall when I read a statement in THE FLORIST that sweet peas did not pay as well, in ordinary cases, as carnations. However, I have picked all through the winter ten times as many sweet peas as carnations for the same bench room, and so the proceeds have been several times as much. Now they have "fought the good fight," and must soon be uprooted, but though ripening (like hay) they flower still.

A. W. H.

ASA GRAY is one of the first 29 names chosen for the hall of fame.

THE twenty-fifth annual convention of the Society of American Florists, to be held at Cincinnati next August, should not be overlooked in making the summer arrangements.

MEMORIAL DAY business will be heavy this year, judging from the reports already received. We shall be pleased to have details from our readers as to the demand, supply and prices in all sections.

The American Rose Society.

THE GOLD MEDAL.

Mrs. Gertrude Hubbard, a lady of Washington, D. C., has established a gold medal fund for the American Rose Society, by placing the sum of $250 in the treasury of our society, the interest accruing from which shall be used each five years for a gold medal, to be awarded to the most promising new rose of American origin. Mrs. Hubbard has taken much interest all her life in stimulating and encouraging people, young and old, to make attractive homes and home surroundings. Mrs. Hubbard has been elected the first honorary member of the society. Peter Bisset, superintendent of Twin Oaks, Washington, was Mrs. Hubbard s agent in the matter.

Doubleday, Page & Co., New York, have submitted a proposition of interest concerning the awarding of a series of medals which will be acted upon at the next meeting of the executive committee. Roses are being planted out this year more extensively than common, and if the rose growers are wise they will throw their support to the American Rose Society by becoming active members.

BENJAMIN HAMMOND, Sec'y.

Glass Tariff.

As a commodity affecting the thousands of greenhouse men, large and small, glass stands a very important factor. The duty levied on glass per pound practically cut out European competition, and prices until about 18 months ago ran high. The gradation of import prices is pound rate of 1⅜c for size not exceeding 10x15, for size not over 16x24 1⅞c, and so on, running higher as the increase of sizes goes until 4⅜c per pound is reached.

When the section of the tariff bill came up before the senate for action, the Hon. Elihu Root, senator from New York state, took up the side of reduction, urging a modification of the present rates. Senator Simmonds of North Carolina, ably took the same ground, urging at any rate a material reduction upon the sizes in common use. The introduction of machine to take the place of hand-blown glass, and the contest for control of the market is the cause of prevailing low price during the past year. The bill as it goes back to the house of representatives will, in many cases, show marked changes. The national demand is surely on all lines for a reduction of duties when summed up as a whole; localities will and do urge strongly in favor of their own interest. Frank R. Pierson, chairman of the S. A. F. tariff committee, has been to Washington twice on behalf of the interests of the S. A. F. and no one not in close touch with affairs realizes the clash of interests one with another, and how some remote and unlooked for item will affect even the flower grower.

BENJAMIN HAMMOND.

The Coal Problem.

Louis Bruch of the American Radiator Co. in a recent lecture before an audience of architects, contractors and engineers, advanced some new principles and theories in regard to modern heating and some new ideas regarding the heat value of coal. He stated that, while in Germany the coal dealers are required to state the thermal or heat value of the fuel they offer for sale, in America we simply buy coal by the ton with no reference to its heat producing value.

In talking with a representative of THE FLORIST later, Mr. Bruch stated that what is known in Germany as commercial coal contains about 12,000 British thermal units per pound, and consumers know exactly how much heat a ton of coal will produce and boilers are rated accordingly. Over here we are willing to take any old thing the dealers choose to sell us and we do not know, or seemingly care how much ash, slate and moisture it contains or what results it will produce. While this is of moment to every user of coal it is of particular interest to the greenhouse men of the country who are large users of coal and if they could buy their fuel on the basis of heat producing value and have absolute assurance that each ton of coal they used would produce a given amount of heat it would materially reduce coal bills.

All reforms have got to have a beginning and a reform of this kind must have concerted action to attain any measure of success. No attention will be paid to the individual demands of one man or several men, but if a strong body of representative men, such as a florists' club, for instance, should take this matter up and insist in getting value received for its money the opening wedge would be inserted, and it would not be long before other representative bodies would join hands with the florists and make the pressure so strong that the matter could no longer be ignored.

Within the past year the U. S. government has awarded a contract of 400,000 tons of semi-bituminous coal for the Panama railroad, specifying that the coal must be equal in grade to the best product of the Pocahontas or New River regions; dry and free from slate, sulphur, dirt and other impurities and guaranteed to analyze 14,600 British thermal units on the "as received" basis. The coal will be inspected by representatives of the technological branch of the United States geological survey, and the samples taken from the cars in accordance with their practice, for analysis. Coal which analyzes 14,600 British thermal units is the standard required by isthmus operations, but coal will be accepted down to a minimum of 14,350 British thermal units upon payment of a penalty by the contractor of one cent per 100 British thermal units, or fraction thereof below the standard of 14,600 established.

When the growers can buy their coal on this basis they will find their annual expense for heating their houses very materially reduced.

Important Foreign Exhibitions.

July 2.—National rose show, National Rose Society, Royal Botanic Gardens, Regents Park, London, N. W., Eng. E. Mawley, secretary, Rosebank, Berkhamsted, Herts, Eng.

July 6-7.—Holland House show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 23.—National sweet pea show, National Sweet Pea Society, R. H. S. Hall, Vincent square, Westminster, Eng. C. H. Curtis, secretary, 2 Adelaide road, Brentford, London, W., Eng.

September 8-9.—Royal Caledonian Horticultural Society, Centenary show, Waverly Market, Edinburgh, Scot. John McKenzie, secretary, 23 Rutland square, Edinburgh, Scotland.

Meetings Next Week.

Albany, N. Y., June 3.—Albany Florists' Club, W. C. King's, 24-26 Steuben street.

Buffalo, N. Y., June 1, 8 p. m.—Buffalo Florists' Club, Saturn hall.

Chicago, June 3, 8 p. m.—Chicago Florists' Club, Union restaurant, 111 Randolph street.

Indianapolis, Ind., June 1, 1:30 p. m.—State Florists' Association of Indiana, State House.

Lake Geneva, Wis., June 5, 8 p. m.—Lake Geneva Gardeners' and Foremen's Association, News building.

Louisville, Ky., June 1, 8 p. m.—The Kentucky Society of Florists, 206 Sixth street.

Milwaukee, Wis., June 3, 8 p. m.—Milwaukee Florists' Club, Quiet House, corner Broadway and Mason streets.

New Orleans, La., June 2, 8 p. m.—German Gardeners' Club, 624 Common street.

Newport, R. I., June 2.—Newport Horticultural Society.

Pasadena, Calif., June 4, 8 p. m.—Pasadena Gardeners' Association, G. A. R. hall, East Colorado street.

Pittsburg, Pa., June 1, 8 p. m.—Pittsburg and Allegheny Gardeners' and Florists' Club, 422 Sixth avenue.

Salt Lake City, Utah, June 1.—Salt Lake Florists' Club, Huddart Floral Co., 114 East Second South street.

San Francisco, Calif., June 5.—Pacific Coast Horticultural Society.

Seattle, Wash., June 1.—Seattle Florists' Association, Chamber of Commerce, Second avenue and Columbia streets.

Utica, N. Y., June 3, 8 p. m.—Utica Florists' Club, Hotel Martin.

Minnesota State Florists' Association.

The regular monthly meeting of the Minnesota State Florists' Association was held on the evening of May 18 in St. Paul. The entertainment committee reported all bills paid and all tickets accounted for. There was a small deficit made up by members of the trade outside of the association. A discussion as to the advisability of reducing the annual dues resulted in allowing the matter to rest until the annual meeting in September.

A committee of four was appointed to arrange for a picnic in July. A. S. Swanson and E. P. Holm, of St. Paul, and E. Nagel and C. N. Ruedlinger, of Minneapolis, were named as the committee. It was decided to suspend the regular June meeting and instruct the executive committee to call a field day at its discretion.

O. J. Olson of the flower show committee made a report and read a letter from the president of the St. Paul Institute of Arts and Sciences, offering to assume the other expenses of the show if the florists would provide the prize money. Mr. Jorgenson of the same committee reported a similar proposition from the Minneapolis commercial club. Neither proposition being acceptable to the members of the association the committee was instructed to interview the florists of the Twin Cities for the purpose of obtaining a guarantee fund, the committee to meet and report May 24 at the president's office.

Otto Will, who has just returned from a honeymoon trip around the world, gave us a very interesting talk on his travels, after which the meeting adjourned.

S. D. DYSINGER, Sec'y.

MARKET OVERSTOCKED.

It is anything but a pleasure to report the cut flower business for the past week. Immense quantities of stock arrived and an outlet had to be found somewhere. After the retailers were through with their purchasing in the morning about two-thirds of the stock remained on the tables and these flowers found an outlet by the fakir, hospital and barrel route. The majority of roses received are inferior grades with variegated foliage; in other words full of mildew. The best stock finds a ready market and this is also true of carnations. There are too many seconds and thirds which are sold for whatever the buyer chooses to pay for them. Sweet peas, which, up to a week ago, were good property were a glut the past week. Outdoor flowers, such as lily of the valley, tulips and narcissi are over, and deutzias, syringas, irises, spireas, etc., were used extensively for decorating windows. Green goods of all kinds are in good demand, which is the one redeeming feature. Peter Olinger takes an optimistic view of the market. He says the biggest glut is passed and after Decoration day we can look for a shortage in some lines.

NOTES.

The board of governors of the Florists' Society held the first weekly meeting May 17 at Sinton hotel, and some very gratifying reports were heard from the various committees in charge of S. A. F. matters. The bowling committee has made arrangements for the Grand bowling alleys, eight in number, and the finest alleys in the city. These alleys are within two blocks of the meeting place and the bowlers will have a chance to get acquainted with them before the tournament. C. E. Critchell and W. H. Gear are responsible for selecting these alleys and are to be congratulated on the selection.

Geo. Corbett of College Hill is very busy unloading his immense stock of bedding plants. Some person thought George did not have enough work, so left a basket with a three-months-old baby on his porch the other day. Mr. Corbett notified the authorities and says he is too busy raising plants at present and cannot devote much time to raising babies.

Hardesty & Co. and the Walnut Hills Floral Bazaar had the lion's share of the work for the Kinney funeral. Some very artistic wreaths and bunches were noticed and American Beauty roses, Lilium longiflorum and sweet peas were the predominating flowers. S.

Should Be Advertised Now

NOTES FROM ST. BERNARD.

Business in this part of the country is about as good as can be expected but the supply exceeds the demand and prices for roses, carnations, etc., are about as low as they ever have been. Bedding plants seem to be in great demand. Geraniums, salvias, etc., are going off rapidly, and Decoration day will probably see a scarcity of flowering plants.

George & Allen have brought suit against the city for losses sustained last winter through the water being shut off from them without cause or warning. The suit is for $5,000 and it is to be hoped that they will get enough out of it to cover their losses, as they were unable to heat their houses. E. M.

NORWOOD, PA.—W. Gregg of Philadelphia, who has greenhouses at Fortieth and Market streets, in that city, is erecting new greenhouses on a tract of land recently purchased by him here.

PEONIES LATE BUT GOOD.

Weather conditions for the past few weeks have been very changeable, varying from frosty temperature to some very high registers. The nights have been unusually cool and almost every kind of vegetation is backward. Flowers are in most cases plentiful, and there is a slight increase in the demand, occasioned by school commencements in the country. The outlook for Memorial day flowers is only fair. Peonies are from one to two weeks late in flowering, but appear to be in fairly good form. Roses are holding up pretty well owing to the cool nights. Carnations are not so good as usual nor in very large quantity.

NOTES.

The improvements being made at the plant of the Wm. L. Rock Flower Co. are well under way. When completed this firm will have about double the glass it had last season and Mr. Rock hopes to be in condition to take better care of the increasing business.

Mrs. Lamb of Kellogg's enjoyed a trip to Pleasant Hill last week in a new auto she has purchased recently.

J. W. Barnes reports a very satisfactory business this spring, both in store trade and in the bedding line.

The address of the Peterson Floral Co. is now Gillham and Linwood boulevards.

Samuel Murray is making a splendid display of English boxwood and bay trees.

Chas. E. Heite returned from a week of fishing in southern Missouri.

MARKET TAKES UPWARD TREND.

The market, which had remained dormant for two weeks, continued in its state of lethargy until Friday, when signs of awakening were observed all along the line, and Saturday saw a resumption of business that began to approach the normal. The cool days and cooler nights of the past week lessened the cut considerably and growers who had been sending in anywhere from 1,000 to 1,500 roses per day reduced their cut to 500. This, with the better quality of the blooms, stopped the glut and brought the supply down to within speaking terms with the demand. By Monday everyone was busy, and while shipping orders were very heavy the wholesalers and commission men were able to meet all the demands. American Beauty roses, as is usual at this season, are in large crop and, with few exceptions, are up to the standard. Bride and Bridesmaid are especially good, and while the supply is plentiful there is no overproduction. Richmond, Killarney, Mrs. Marshall Field, Mrs. Potter Palmer and Uncle John are also in good cut, Perle being scarce. Carnations are rather an uncertain quantity and the demand for the colored varieties promises to exceed the supply before everyone is taken care of, and reds, as usual, are more sought after than found. A great many splits were seen early in the week, which is rather unusual at this season, but by Wednesday they were coming in in better quality but in limited supply, and prices took an up turn. Peonies became more prominent at the beginning of the week, though like carnations red was scarce. A great many of these flowers are still in cold storage, as the demand has not been entirely up to expectations, and there will undoubtedly be more than enough to meet all wants. There is no lack of sweet peas, the Spencer types predominating, and of good quality, but lilacs are conspicuously absent.

DECORATION DAY.

Decoration day falls on Sunday this year and the holiday will be celebrated to a large extent on Monday. Sunday, however, will see a large demand for flowers, as hosts of people will go to the cemeteries on that day to decorate the graves, and the wise florist will get his orders in early, as the indications now point to a general shortening up all along the line due to the cold, wet weather, and prices promise to be higher than last year.

NOTES.

Luke Collins, of the Parkside Greenhouses, Seventieth street, has a splendid line of geraniums and other bedding stock for the Memorial day trade. The rapid building up of his neighborhood has increased his trade considerably and he is thinking of extending his greenhouses, probably this season. His geraniums are in all the best varieties, about 20,000 of them, and other stock is in the same ratio. Some outdoor tulips are very fine, flowering the second year, and just about right for Memorial day.

Miss Louise Malcher, a long-time florist at 369 Division street, was married May 20 to Wm. Schroeter, of Columbus, Neb., which city is to be their future home. Mrs. Schroeter will be missed from the Chicago market where she has been so long known. Our congratulations are hearty.

E. H. Hunt has issued a very neat little catalogue extolling the merits of the Wittbold devices for cement benches, claiming there is a saving of 25 per cent in first cost and that they are practically indestructible.

Adam Ziska & Co. have moved their wire shop from their old location with J. B. Deamud Co. to 52 Wabash avenue, where they will have larger quarters, made necessary by their increasing business.

Peter Reinberg is building four houses, each 27½x300 feet, at his new place. The shipping trade in rose plants has been and continues very good here, quite above the average.

Poehlmann Bros. Co. is having a big demand for yellow roses and class colors for commencement exercises, of which the firm has a large supply and is able to take care of all orders.

The J. B. Deamud Co. has booked some very large orders for Decoration day. This firm's peonies were never finer, and while fancy ferns are scarce there will be plenty to go around.

Gilbert H. Wild, of Sarcoxie, Mo., was on the market on Tuesday, and states that he has shipped in 3,000 dozen peonies for the Decoration day trade.

Zeck & Mann are showing a large lot of extra fine Bride and Bridesmaid roses, that are exceptionally good for this time in the season.

Wietor Bros. have six houses of red carnations that are coming along in nice shape and will be ready for the Decoration day trade.

T. E. Waters, of A. L. Randall Co., returned last Saturday from a two weeks' trip through the state. He reports good business.

Jens Jensen's new business address is 804-805 Steinway hall, 17 Van Buren street.

Bassett & Washburn say that roses and carnations are shortening up and they have had to turn down several orders.

The A. L. Randall Co. is getting in some nice Killarney roses and is also showing some very fine butterfly sweet peas.

Visitors: W. A. Kennedy, of the C. C. Pollworth Co., Milwaukee, Wis.; Gilbert H. Wild, Sarcoxie, Mo.; C. H. Woolsey, Rockford, Ill.; H. A. Fisher, Kalamazoo, Mich.; Max Spanard and Wm. Feniger, Toledo, O.; J. A. Peterson, Cincinnati, O.

St. Louis.

BUSINESS VERY LIGHT.

Had it not been for the funerals of some very prominent persons, with exercises at the medical college, business the past week would have been at a standstill. The presence of outdoor flowers has not improved the demand. Memorial day and the June weddings and school closings will help, perhaps, and then the craft can take it easy and figure out profit and loss. Some jasmines of poor quality are in the market and the receipts of peonies are increasing. Outdoor sweet peas will soon be ready. Some good carnations are still seen in the market, also quite a few American Beauty roses, the latter in fair demand. Yellow daisies are selling well. Dagger ferns are in.

NOTES.

The annual flower sermon provided for in the will of the late Henry Shaw, founder of the Missouri Botanical Gardens, was preached May 23 by Bishop Brooke of Oklahoma at Christ Church cathedral. Henry Shaw stipulated in his will that a preacher of note be invited each year to give a sermon on flowers. Flowers filled the chancel of the cathedral and the preacher dwelt upon the wonders of plant life.

The Eggeling Floral Co. has removed all its greenhouses on South Grand avenue to Kinloch, where carnations are now grown extensively, and two more houses will be built this summer. The retail establishment will not be disturbed.

C. Young & Sons Co., Geo. Waldbart and F. H. Weber had some very elaborate designs for the Walsh funeral last Saturday. The trade in general was quite busy that day with funeral work.

Park Commissioner Scanlan has urged the formation of a lake and baseball and athletic grounds at the new Fair Grounds park.

The Mermid Jaccard Jewelry Co., on the occasion of its eightieth anniversary, gave away thousands of carnations to visitors.

John S. Seketer has made a fine fantail gold fish design for the Kelley Floral Co., which desires to advertise this specialty.

Chas. Connon, brother of John Connon of Webster Grove, was married last week.

Mrs. M. M. Ayres has had a splendid spring trade. W. F.

INDIANAPOLIS, IND.—Geo. L. Willner lost his son May 15 by a sad accident; the boy in a spirit of fun boarded a car at the side and, leaping off, got his foot under the car. He died shortly after at the hospital.

HEAVY RECEIPTS WITH LIGHT DEMAND.

It is the consensus of opinion among the dealers that the condition of business during the greater part of last week was about as bad as it could have been. Although receipts were heavy, such a condition has prevailed at other times, but few can recall a time when so large a supply was accompanied by such a light demand. There was not enough life in the market to awaken excitement, even over selling good stock at hucksters' prices. Unseasonably cool weather toward the last of the week, with heavy rain, brought slight relief by shortening up the supply, and the Saturday trade, though not heavy, was an improvement over previous conditions. The lilacs are nearly done, for which most dealers in greenhouse stock are truly thankful. A big stock of peonies is the next thing with which the street must wrestle. Scattering lots of the poorer varieties have been coming in for the past week, but the cool weather has delayed the bulk of the crop. It will come, however, and the indications are that it will come in one big bunch. Turning from this dark picture, there seems a ray of light from the fact that there are prospects of a large falling off in the supply of roses. For the past two weeks this market has literally been deluged with good, bad and indifferent roses, and it is unreasonable to suppose that such a condition can continue much longer. While it therefore appears that there is likely to be much less greenhouse stock for a few weeks, nobody is worrying over the prospects of a scarcity, with the peonies in sight.

May 24.—Stock is rather scarce this morning and prices are advancing. The approach of Decoration day seems to warrant the assurance that prices will be fair throughout the week. The weather, though fair, continues cool, and it seems reasonable that for this week the arrivals will be lighter.

May 26.—Market active.

NOTES.

There is talk floating around about the organization of a baseball team among the young men of the wholesale district. We trust the movement will be successful. It may be that baseball will prove more popular with florists than bowling. Judging from recent events, the most popular sport would be something that could be organized and carried on without expense. That, however, is a hard thing to do in this city.

Miss Lucy M. E. Allen, daughter of J. K. Allen, was married May 18 to Edwin Morgan of Newark, N. J. The ceremony took place at Grace M. E. church, Arlington, N. J. The bride is a young lady who has endeared herself to a large circle of friends by her kind and womanly ways; the groom is a fine young man with promising business connections, and we wish them godspeed.

Joe Millang, manager for the New York Cut Flower Co., is wearing the smile that won't come off. Cause: A young man out at the Bayside home who has been christened Charles Ridgeway Millang. The first two names are said to be in honor of the proprietor of a popular magazine, but that is a matter of secondary importance. Joe has now a girl and a boy.

Arthur Merritt, a skilful designer, well known in the retail trade of this city, has associated himself with the business of Peter F. McKenney. The present location is 114 West Twenty-eighth street, but early in June the business will be removed to Fifth avenue and Forty-second street.

It being reported that Frank Traendly had recently bought a row of flats in Brooklyn, one of the jokers of Twenty-eighth street started the story that he had engaged another well-known wholesaler to serve as janitor of the same, and the laugh is going around.

The news of the death of the venerable Chas. L. Allen of Floral Park, elsewhere noted, was received here with universal regret. Through his interest in horticulture as well as by his kindly personality, Mr. Allen had the respect and esteem of all who knew him.

Joseph Voecke, salesman for W. H. Siebrecht in the Cut Flower Exchange, who last week was reported ill with pneumonia, is again at work. Fortunately for Joe, his case was not as serious as first diagnosed by the medical sharps, but he says he had enough.

R. A. Merritt, well known in the wholesale district through his connection with the flower department at Siegel, Cooper & Co., was married on May 15 to Miss Pauline Stein. The happy couple have the good wishes of a large circle of friends.

Eugene Dailledouze says all his young carnations are planted in the field and looking well. He thinks that at present it is easier to grow carnations than to get a fair price for them, but hopes that conditions will soon improve.

Park Commissioner Henry Smith has asked for six additional policemen to patrol Central park with a view to checking the thefts and destruction of flowers and trees which have been worse this year than ever before.

Chas. H. Totty, Madison, N. J., was in the cut flower district. He says he has had a very busy season and he thinks that conditions are improving.

Wadley & Smythe had a large amount of elaborate work for the funeral of the late H. H. Rogers, a prominent official of the Standard Oil Co.

Manager Coan of the Growers' Cut Flower Co. is disposed to take an optimistic view of the situation. He says that he expects a good June business.

A well known dealer in florists' green visited the wholesale district on May 20 seeking a business location.

Miss Smedley, bookkeeper for J. K. Allen, who has been ill for over a week, is again at her desk.

*[The market report in this column was badly jumbled last week by misplacing a number of lines from another city letter. —Ed.]

Baltimore.

GOOD PROSPECTS.

The season continues backward and a good deal of planting is still to be done. With variable temperatures and long-maintained series of drying winds much of the stock that was set out is at a standstill, but recent rains have soaked the ground thoroughly and started everything. Conditions have not been favorable for cut flowers, but they have been quite abundant enough for the demand which, for the past week, has been the most meager of the year. Carnations keep in full supply and are hard to move at any figure; roses are less abundant, but, as a rule, the quality is not first class and a good deal of mildew is seen. Outdoor stock is abundant and supersedes greenhouse grown for popular uses. The lily of the valley crop was phenomenally abundant and many flowers were wasted. The commencement season is opening and there ought to be some stir along the whole line; then come the June weddings, which promise, it is said, to be numerous if not elaborate and profuse as to decorations. All of this should give some business. There is a great suburban development in this locality. The extension of the trolley system has changed this; opened up towns and suburban settlements and private parks are being established. It would seem that it is only necessary to run an electric railway into a desert and within a year it will flourish and blossom like a garden. Consequent upon this is an expansion of the demand for nursery stock, for which the local nurserymen report an immensely large demand this spring. The planting season has been unusually prolonged this year, and, except for a limited time in April, when there was an abnormal spell of heat, the weather has been favorable. The absence of rain more latterly threatened the loss of some stock in plantations or lined out in the nurseries, but now all seem flourishing.

The wonderful achievements in color photography have gained universal attention, and the beautiful results have been admired by men and women of all professions. To the florist it has peculiar and strong attractions, as the pictures define so much more clearly than old methods the fine points of these products in adding color to the attractions of form. Dr. Wm. Simon, one of our eminent chemists, a lecturer in a college here, is much interested in this new development, and some weeks ago sent to John Cook, the rosarian, then confined to his room but now happily recovering from a prolonged attack of rheumatism, a photograph in color of that gentleman's own productions, Cardinal, My Maryland and several others of his seedling roses, showing their distinctive tints as well as habits of growth and varying outlines of form, making a very attractive and seasonable souvenir for both artists.

Our park board is on the market for an article unique probably in the requirements of that popular branch of the municipal machinery. It wants a zebra; if any reader of THE FLORIST has one packed in camphor or stored away in the garret he may find a purchaser by addressing the superintendent, advising him of its virtues and number of stripes and inclosing a certified check for $200 on some national bank, as an evidence of good faith, as the newspapers say, that it will be really and truly trotted in if ordered. S. B.

THE ANNUAL PICNIC.

At the meeting of the Gardeners' and Florists' Club held May 24 it was decided to hold the annual family picnic July 14 at Avondale, one of the many places accessible to Baltimoreans for an enjoyable summer outing.

MARKET OVERSTOCKED.

The market is filled to overflowing with all kinds of seasonable flowers; what would have happened had it not been for the cold and cheerless weather there is no saying, as much of the stock is now run out in very cheap week-end sales to the street men. A favorite plan is for several to club together, hire a wagon and take a load to a residential shopping center on Saturday night, where they are disposed of to good advantage. There appears to be a surfeit of everything with the exception of orchids, gardenias and peonies; these latter have been held back by the weather, which has been unusually cool for the season. The prospects are, however, that there will be abundance for Decoration day, as a few warm, sunny days will bring them out in quantity. Sweet peas have sold up fairly well, the cloudy weather keeping the shipments light. Good lavender are in demand as a substitute for violets. Lily of the valley of first quality is plentiful and cheap, and withal a good seller. American Beauty roses are rapidly deteriorating in quality and hard to move; the street men get them by the armload. Prices will advance for Decoration day, as commission men say they are booking large orders from out-of-town buyers. Shrubbery of all kinds has been fine and is extensively used for window decoration. Hardy ferns have been scarce, but this week saw the first of the new crop a trifle soft, but much better than the last of the stored goods. Green and bronze imported magnolias are giving the galax a fight for favor; many more are being used than last season. They make a much richer looking wreath, and while they cost more than the galax by the thousand, the leaves are larger and go farther. There is no waste, as they keep until used, and the made-up pieces can be displayed in the store for quite a long time without deteriorating, while the galax soon shrivel, particularly at this season. The commission men are looking forward to a big business for Decoration day, as many orders are already booked. The cold weather of the past week injured the rose crop, as many had drawn their fires, and there is much mildew.

NOTES.

The heating arrangement of the Robert Craig Co.'s new establishment at Norwood has been awarded to Lord & Burnham Co., and Dennis Connor, who represents them in this city, says several new features will be introduced. The installation will be for hot water supplied through 2-inch pipes. An independent steam boiler will furnish steam to run a rotary pump which will force the hot water through the pipes, returning it to the boiler at almost the same temperature at which it is taken out. Steam is also supplied to run a blower which furnishes draft to the furnace, permitting the use of a low grade of fuel, such as No. 2 buckwheat. This economy in heating the water, coupled with the perfect circulation, makes an ideal system for a large place and is a great stride in advance over the past methods.

The Leo Niessen Co. has made great preparations and arranged for a large stock of all the standard flowers. There will be peonies by the thousands, these being one of the best sellers.

Wm. McKissick & Bros. are featuring eastern American Beauty roses, carnations and peonies and say they have everything well in hand for a large business. K.

CLIFTON, O.—Adam Miller is at the head of a committee for floral decorations for Memorial day.

Boston.

IMMORTELLE WREATHS LOSE FAVOR.

Business relaxed considerably during the past week, the usual procedure directly preceding a holiday. Advance orders for Memorial day requisites are being received in good numbers and we look for an average business. The retailers have stored up vast quantities of foliage wreaths. Galax, green and bronze is the leader in this class of goods, box and English ivy being used for the better class goods. The desire for metallic and immortelle combinations no longer exists and only in the very cheapest trade is the demand noticeable. Owing to continued cold weather there is not the abundance of stock being thrown on the market that is customary at this holiday time. Good roses of any sort were practically unobtainable at any price, and the best the market offered brought top prices easily without comment. Carnations have held well and the individual varieties are as good as have been seen this season. Fair Maid is showing up in its usual good form and leaves no doubt of its superiority over all other varieties as a warm weather carnation. This and Winsor are the leaders for colored carnations, and White Perfection has no strong competitor in its class. Lily of the valley, which has been scarce since Easter, is now plentiful and good. Outdoor lilac is now ready. Hydrangeas are the only flowering plants worth recognition, and the local growers have the market well in hand.

NOTES.

The Gardeners' and Florists' Club held its regular monthly meeting May 18 at Horticultural Hall. The feature of the evening was the reading of a paper on "Garden Watering." The author, Peter Bissett, although unable to be present, was loudly applauded for his efforts. Plans are being formed for the picnic in July and the committee in charge is working arduously. The meeting was attended by 125 members.

Louis Small, of Tewksbury, whose fame as a hunter and sportsman is well known, has a handsome motor boat in which he anticipates much pleasure this summer. The captain, Morris Conley and Bert Holden left on Saturday for a cruise to Casco bay, Maine, where Mr. Conley has a cottage. The party reports a pleasant trip and all were on hand for business Monday morning as usual.

The annual May exhibition of the Massachusetts Horticultural Society was held May 22 at the society's building. The exhibition was a typical early summer display. One of the striking features was the display of orchids shown by T. J. Butterworth, of Framingham. Two plants of Cattleya Mossiæ, each bearing from 50 to 60 blooms, were shown. B.

How Plants Feed.

ROLE OF THE MINERAL NUTRIENTS.

As has been already stated, the manufacture of carbohydrates, amides, and proteids demands carbon, hydrogen, oxygen, nitrogen, sulphur and phosphorus, as some or all of these enter into the composition of these substances and protoplasm itself. Let us examine for a moment the specific functions of the other essential ingredients in plant nutrition: viz., potassium, calcium, magnesium and iron.

Numerous experiments and observations tend to show that potassium is necessary for the formation of starch, and in the polymerization of carbohydrates. Some experimenters assume that potassium has an influence on the osmotic power of plants, makes plants more resistant to freezing, and produces color in fruit.

Calcium is essential to the living cells of green plants, but unessential in fungi. Moreover, it has been observed that calcium accumulates in leaves when starch formation is going on, and is associated with starch transfer.

Magnesium is essential to the assimilation of phosphorus, and in its absence oil is not formed. It is always present in chlorophyll.

Iron is essential, as chlorophyll cannot be formed in its absence, and it may be that it is one of the essential components of protoplasm, since it is claimed that fungi which have no chlorophyll cannot do without iron.

TOXIC EXCRETA AND MINERAL NUTRIENTS.

The discussion of this topic is now a live one with agricultural chemists and plant physiologists, as current literature shows. One side maintains that even the best soil becomes exhausted of available plant food materials after a certain number of crops have been removed from it, and that it is necessary to replace the lost mineral nutrients by the addition of fertilizers in one form or another. For example, Dr. Hopkins of Illinois states that 1,000 years of cropping on the average prairie and upland timber soils of Illinois would require every pound of phosphorus in the soil to a depth of 10 feet. There is a limit, therefore, to the amount of essential mineral nutrients in the soil, and that in time there must be exhaustion if nothing be added.

The other side, championed by the United States Bureau of Soils, contends that "the fertility of the soil can be maintained by arranging a system of rotation and growing each year a crop that is not injured by the excreta of the preceding crop"; that "unproductiveness arises from the presence in soils of the waste products of plants," and that "fertilizer salts can bring about or aid in the destruction of toxic organic substances," according to W. Lochead in a paper read before the Canadian Seed Trade Association in Ottawa, February 5, 1909.

The soil, it is contended farther, is not the product of the decomposition of the rock, but rather "is an unconsolidated rock containing the minerals which were present in the solid rock from which it was derived, together with more or less decomposition products." These mineral ingredients are appreciably soluble, and "the composition and concentration of the soil moisture, the nutrient solution, is the same in all soil solutions. All soils contain sufficient plant food for the support of plants; and when the plant takes into its substance some of the mineral matter from the solution, the solid minerals in contact with the solution immediately dissolve, and the solution is restored to its former concentration. The exhaustion of the soil, therefore, is merely a relative phrase and resolves itself into the question of the rate at which the solution can recover itself. This rate is as fast on an acre planted in our ordinary crops as the demand made upon it by the plant."

As is usual in controversial cases there is much to be said for both sides. It is probable that when the discussion is closed it will be found that both sides were right on many points, and that both sides have contributed much to the solution of the problem of fertilizers. It is undoubtedly true that plants excrete certain waste products, but the exact nature of those products is not understood. That some of them are toxic to the plants excreting them or to other plants has been the belief of some botanists for many years, and many instances can be cited when the presence of a certain plant inhibits the growth of another plant beside it. Dr. Schreiner of the United States Bureau of Soils has actually isolated some of these toxic organic compounds from the soil, and is confident that they have been excreted by the plant and not by organisms in the soil. Moreover, he has shown that very minute

quantities of this poisonous excretion are sufficient to inhibit the growth of certain plants.

The bureau of soils has also proved that "certain inert substances of no fertilizing value, like carbon black, may produce in certain cases an improvement equal to that of a standard fertilizer. These toxic substances can be destroyed or rendered harmless in various ways:

(1) By the use of certain fertilizers, such as sodium nitrate, stable manure, green manure, whose beneficial effects are in large part due to their action on the soil constituents rather than to the salts carried into the soil.

(2) By "methods of cultivation which promote the aeration of the soil and the growth of micro-organisms that aid in destroying deleterious organic substances."

(3) By proper and systematic crop rotation in which a crop is not injured by the excreta of the preceding crop.

(4) By treatment with absorbing agents such as carbon black.

(5) By the oxidizing powers of the roots themselves combined with substances ordinarily used as fertilizers.

It is claimed, moreover, that chemical analyses of fertilizers are of little value for correcting the difficulties of the soil and rendering them productive, because a fertilizer that improves one soil may not improve another.

Some of the questions under discussion which are not convincingly answered by the bureau of soils are these:

1. Are the different soil solutions found in all kinds of soils in every part of the country of the same composition and concentration with regard to phosphoric acid, potash and nitrates? We know, for example that waters are soft in one region and hard in another, thus making a difference in composition, in this respect at least.

2. Is not a considerable amount of the soil solution lost by leaching and run-off? This must happen, one would think, in sandy soils which have very little retentive power.

3. Will the soil solution recover its normal concentration and composition as fast as the plant disturbs it? Is a soil solution ever saturated?

4. Is there any need of introducing nitrogen to the soil to replace that taken out of it by a crop? Or, is it possible to keep up the fertility of the soil, without the introduction of a clover crop in the rotation, or the use of nitrate or barnyard fertilizers?

5. What is the true function of humus in the soil?

6. If humus is the stable, inert substance that the bureau of soils claims it to be, why does the dark color of the soil disappear gradually under successive cropping?

The majority of agricultural chemists believe, I think, that the amount of food materials in the soil depends partly on the kind of rock from which it has been derived, partly on its fixing power, and partly on the kind and quantity of plants which grow upon it. They believe also that each kind of soil has its own proportions of the different plant nutrients, and that each kind of crop has its own special requirements of food materials. A cereal crop will take from the soil about one-fourth as much potash, about one-half as much nitrogen as a root crop. It would seem, therefore, that the element, whether it be phosphorus, nitrogen or potassium, of which there is relatively the least, determines the productive power of the soil. A deep-rooted plant, like clover, gathers its food materials from a level which a wheat plant, for example, cannot penetrate, hence the practice of alternating deep-rooted crops with shallow-rooted crops in a rotation.

Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24 1909.

NEW YORK.—John Bodger and wife sailed for Europe on the S. S. Carmania, May 22.

WE have further reports of insufficient moisture for California crops during April and May.

THE death of C. L. Allen, Floral Park, N. Y., May 21, is recorded in our obituary column, page 905.

MINNEAPOLIS, MINN.—C. C. Massie and D. Hamilton of Northrup, King & Co. sailed from New York on the S. S. Baltic for Europe May 26.

LONG ISLAND CABBAGE, now beginning to bloom, is looking well and promising good, but still must run the gauntlet of insects, storms, etc.

CHICAGO.—Contract prices on the board of trade May 26 for grass seed were noted as follows: Prime timothy, $3.90 (nominal); white clover, $16.

E. J. DEAL, of W. W. Johnson & Son, Ltd., Boston, Eng., is planning to visit the United States in August and September, sailing from Liverpool July 31.

G. C. ELDERING, representing W. J. Eldering & Son, Overveen, Haarlem, Holland, who has been in the United States several weeks, reports very satisfactory business and will sail from New York on the S. S. New Amsterdam, June 8.

SAGINAW, MICH.—W. H. Grenell says pea planting is dragging and that some farmers are returning seed, stating they cannot plough the land and it is getting too late to sow. Cannot expect a full crop this year.—Mrs. W. H. Grenell and Miss T. M. Swett sailed on the S. S. Carpathia for Naples May 20, and will make a tour of Europe, returning in August.

HOLLISTER, CALIF., May 25.—In the case of Braslan versus Pieters, Judge Vannostrand of the superior court of San Francisco today denied the motion of the A. J. Pieters Seed Co. for a change of venue to the court of Hollister. The hearing for the appointment of a receiver for the A. J. Pieters Seed Co. is set for June 3.—San Jose (Calif.) Mercury.

SAN JOSE, CALIF.—Fred S. Plant, president of the Plant Seed Co., St. Louis, is a visitor this week.

IOWA SEEDSMEN.—The annual meeting of the Iowa Seed Dealers' Association will be held at the Chamberlain hotel in Des Moines, June 1, and it is believed that there will be a full attendance of members present as quite important matters are to come up before this meeting.

MT. STERLING, KY.—Commonwealth's Attorney Conner has sued the Bluegrass Seed Co. and six other citizens. Each is sued for $5,000. They are charged with forming a trust to control the price and sale of Kentucky bluegrass seed in violation of the state anti-trust law.—Maysville Public Ledger.

LOS ANGELES, CALIF.—About June 15 H. L. Musser, president of Aggeler & Musser Seed Co., will depart for an extended eastern trip, visiting his aged mother at Marietta, Pa., and will also visit the various large cities throughout the east in the interest of the seed business. During the 14 years Mr. Musser has been on the coast he has made a thorough study of local market gardening, and has been successful in introducing many new varieties of vegetables, among which are the casabas, for which his firm is famous. He will endeavor to interest eastern seedsmen in these creations, and will also secure such novelties as he may find in the eastern market. Mr. Musser will be accompanied by Mrs. Musser and their daughter Mary.

AFTER spending six months in southern Europe, A. H. Goodwin, vice president of the W. W. Barnard Co., Chicago, returned to business last week more than ever convinced that the climate of southern California is superior to that of Italy and Austria. Mr. Goodwin cast business cares to the winds while abroad and did not go near a seedsman, but says that this is the worst season in 20 years in the seed business of southern Europe, due, it is claimed, to the cold, wet weather and recent earthquakes. He talked very entertainingly of his visits to Buda Pesth, Naples, Venice and other of the principal cities of that part of Europe, and was in Venice when the kaiser visited that port. He was in Sicily at the time of the earthquake and was reported lost. Later he passed through the straits of Messina and viewed at close range the ravages of the great upheaval. It is his belief that from 50,000 to 75,000 people are still buried beneath the ruins of Messina whose bodies will never be recovered.

Michigan Peas and Beans.

Alpena, May 24.—The season is unusually late with us and as it remains so cool, with an occasional rain, the ground dries very slowly, especially the low ground, which will be sown very late. Aside from these conditions we think that the prospects are fairly good up to the present time.

In Northern New York.

Le Roy, May 20.—The weather conditions for sowing peas have been extremely unfavorable during the past two months, and the few peas which have been sown in the seed pea growing sections, have been sown a month later than they should have been, which is quite likely to result in an unsatisfactory crop. The weather conditions thus far this season have been very similar to a year ago and the prospects for a good pea crop are far from being satisfactory to growers or seedsmen.

American Seed Trade Association.

ANNUAL CONVENTION.

The seedsmen meet on the Canadian side of Niagara Falls June 22-24, with headquarters at the Clifton hotel, which is claimed to be an ideal location, its beautiful glass-front dining room facing probably the finest possible view of these magnificent falls. The central location here, midway between the east and west, should insure full attendance and the location and surroundings make a great success both commercially and socially. An unusually fine programme has been arranged, including the following papers: "The National Organization of Seed Analysis—Its Purpose and Scope," by Dr. E. H. Jenkins; "Root Crops," by Prof. C. A. Zavitz; "Seed Legislation—Its Uses and Abuses," by Prof. L. H. Pammel; "A Campaign for Rural Progress," by Prof. L. H. Bailey; "The Deterioration of Types of Cabbage," by J. M. Lupton; "Color Photography," illustrated with views from nature, by J. Horace McFarland.

European Seed Crops.

London, May 1.—Cooper, Taber & Co. report as follows: The exceptionally long and severe winter, following on a mild and wet autumn, has destroyed many of the best plantings, and seriously damaged the whole.

Beet.—Table varieties seriously damaged, especially the extra early kinds. Crosby's Egyptian and Detroit will be very short. Long varieties are doing fairly well.

Beet.—Sugar and Swiss Chard have suffered severely, and the same is true of Mangel Wurzel. In each case a large acreage was planted.

Borecole, Brussels Sprouts and Kohl Rabi are a moderate stand.

Cabbage.—All varieties have been badly damaged, but it is not possible to say definitely now what proportion will survive.

Carrot.—Long varieties are standing well but the early short varieties are about 25 per cent less than planted.

Celery.—All varieties nearly destroyed and the crops will be very small.

Celeriac.—About one-half standing.

Endive and Leek.—Moderately good.

Onion.—Italian varieties promise about two-thirds of a crop. French grown varieties will be short.

Parsley and Parsnip.—Nearly an average.

Radish.—Winter varieties about two-thirds standing.

Rutabaga.—American and Long Island Purple-top doing well; Universal nearly a failure; Best of All, Monarch or Elephant and Magnum Bonum doing very badly; other varieties fairly good.

Turnip.—White Globe Strap-leaved failed; Golden Ball, Early Red (Purple), Top Globe and Purple and White Milan will be very short; other varieties promise more than half a crop.

Annual Crops.—Stock seeds are all sown, but nothing further can be reported at present.

Congressional Seedsmen.

PUBLIC PAYS SALARIES AND SUPPLIES SEEDS.

If the current custom of indiscriminate distribution shall indefinitely continue, if this congressional comedy shall drift into a continuous performance, we shall ultimately be driven to the mournful admission that we are not statesmen, but seedsmen; and it will be in order for some distinguished seedsman, some sainted hero of a score of memorable distributions, some legislative knight upon whose shield is blazoned a radish in its glory or a turnip in repose, to arise in his place with becoming gravity and move, Mr. Chairman that the American eagle be taken from the mace and supplanted by a package of vegetable seed as the supreme emblem of the genius, the character, and the principal occupation of American statesmanship.—*Morris Sheppard, of Texas, in House of Representatives.*

Uncle Sam's Free Seeds.

HISTORY OF A GRAVE IMPOSITION.

The board of directors of the Wholesale Seedsmen's League, at its meeting on April 1, passed a motion expressive of its disapproval of the methods and extent of the congressional free seed distribution as a restraint of trade, and, they might have added, as class legislation, always much opposed to the American idea. To make clear how this abuse has developed, I give a brief record of the appropriations by congress over a series of years to cover the costs of the seeds purchased and distributed.

The first distribution was made in 1839, now 70 years ago, the distribution then being made by the commissioner of patents, the expense being $1,000 with which 30,000 packets were distributed. The patent office continued annually thereafter to distribute seeds, the expenses all the while increasing, the money being taken out of the appropriation for agricultural statistics. In 1852 the first special seed appropriation was made by congress. By 1864 that appropriation had arisen to $50,000, and thenceforward for 45 years, as follows:

Year.	Ttl. App'n.	1887	$ 100,000
1865	$ 61,000	1888	103,000
1866	70,165	1889	104,200
1867	115,000	1890	104,200
1868	85,000	1891	105,400
1869	20,000	1892	105,400
1870	20,000	1893	135,400
1871	30,000	1894	135,400
1872	43,000	1895	165,400
1873	55,000	1896	185,400
1874	65,000	1897	130,000
1875	95,000	1898	130,000
1876	65,000	1899	130,000
1877	85,000	1900	170,000
1878	75,000	1901	170,000
1879	75,000	1902	270,000
1880	75,000	1903	270,000
1881	102,157	1904	290,000
1882	100,000	1905	290,000
1883	80,000	1906	242,920
1884	75,000	1907	240,920
1885	100,000	1908	287,000
1886	100,000	1909	258,000

In 1900 the distribution had grown to 15,000,000 packets, not of rare varieties, but of common every-day seeds, such as turnip, cabbage, radish, pumpkin, as can be obtained from any cross roads store; there is nothing in these seeds to advance the agricultural tone of the country. This 15,000,000 packets of 1900 has increased by leaps and bounds until now it is proposed to issue this spring 60,000,000 packets of free seeds, common every-day seeds, to be sent out from the United States seed shop. In these 60,000,000 packets at a retail price of five cents per packet is represented a restraint of trade to the extent of $3,000,000. Certainly this paternalism is a restraint of trade, as the volume is equal to half the annual sale in small flat packets of that of all the seed houses of the land. The interesting point is raised that this restraint is by the government itself,—not by some individual or some trust, but by government.

The original intention of the authors of the governmental free seed distribution was to advance the art of agriculture by the introduction of new or but slightly known and supposedly valuable varieties drawn from all parts of the world of seeds of vegetables, fruits, flowers, grains, grasses, fibers, forage plants, and the encouragement of new agricultural industries,—an excellent plan—really a statesman's idea,—and for which $50,000 should be ample, but the Department of Agriculture seriously fails in these purposes, for now the free seed distribution is mostly of the most common varieties of seeds, purchased at the cheapest price, an example of offensive class legislation with a vengeance. It is an octopus, a gigantic graft, supported in its increasing growth by the votes of the country members of congress who wish to compliment, at the expense of the tax payers in general, their rural constituents by presents of free seeds, 62,000 packets from each congressman, in the hope that they may be re-elected to office as good fellows and again get more graft, a practice discreditable to congressmen as the law-makers of the land, discreditable to them as men, take them in any sense, for they all well know the whole distribution is such a farce and a stench as drags the United States Department of Agriculture far below the dignity of any other department of government; it is a department which should be the people's pride, but, by the free seed distribution of standard varieties of seed, it is made the butt of every joker in the land.

Why should seedsmen handle this subject with gloves—kid gloves? Any other commercial interest so outrageously interfered with would use sledge-hammer arguments. The congressmen know this is one of the most offensive grafts, as it is an annual and steadily increasing fraud, and that its promoters and abettors are only grafters. They know that the nearly $300,000 wasted on seeds and labor is only half of what the distribution costs the government, for there is a secondary expense of an equal amount forced on the post office department by the loading down and blocking the operations of the post-offices, mails and delivery men by the thousands of tons of mail matter, an expense saddled on a distinct department of government and just about equal to the amount of money spent on seeds and their handling by the Department of Agriculture. The whole seed subject as connected with the government is most unsavory.

It is the lower branch of congress upon which rests the blame for the continuance of this most ridiculous and asinine free seed distribution as inclusive of common seeds of garden vegetables. The Secretary of Agriculture, as head of an executive branch of government, must carry out the several provisions of the general act of congress known as the agricultural appropriation bill, assigning money for various purposes, and among these ordering and defining the free seed distribution as inclusive of garden vegetables. But if congress would cut out the garden vegetables and direct that the cash expended be only used for the purpose of purchase and distribution of big things, as Durum wheat, and other foreign varieties of wheat, oats, rye, barley, seeds of foreign and promising grasses, clovers, fibers, fruits, the already good work done at a very small expenditure compared with the waste of cash for common garden seeds, would be increased five-fold, resulting in an almost inconceivable profit to the nation. Of course it is too late to arrest the free seed distribution this spring of 1909, but it is hoped that the president of the United States can be induced another year to veto the entire agricultural appropriation if it contains a repetition of this most offensive form of congressional graft.

BURNET LANDRETH.

Seedsmen's Convention—Niagara Falls—June 22-24, 1909.

Attention of delegates to the above meeting is invited to the fact that the Wabash road is the short line from Chicago to Niagara Falls; indeed, to many people it is known as the "Niagara Falls Short Line." This road operates by way of Detroit, (where a stopover of ten days is permitted on either the going or returning trip) and across lower Canada. Rates via the Wabash are lower than any other direct Niagara Falls line and the service is excellent. Leaving here at 3:00 p. m., June 8th, you reach Niagara Falls the following morning just at breakfast time. First class standard sleepers. Wabash dining cars are

AMERICAN FLORIST. CO., 324 Dearborn St. CHICAGO.

Vaughan's Lilium Harrisii

Careful Selection of Both Plants and Bulbs.

WITH a good crop of **"Harrisii"** in sight, it would be well for growers to remember that Easter comes on March 27th in 1910, which makes it necessary to force a lily that you can depend on getting in on time. Remember, while we do not claim that our **"Harrisii"** are absolutely free from disease, or that every bulb will produce a perfect plant, we do claim that our grower's efforts in the way of spraying and rogueing are producing results, our stock now being freer from disease than ever before and of genuine **"Harrisii"** type — in fact, the best general crop grown on the Island of Bermuda.

Vaughan's Seed Store,

CHICAGO: 84-86 Randolph St. NEW YORK: 25 Barclay St.

noted the country over for the excellent service they provide. Meals a la carte. The round trip fare from Chicago to Niagara Falls by the Wabash Railroad is $19.50, good for 30 days.

Tickets from Chicago to Niagara Falls and return are good between Detroit and Buffalo by boat in either direction and parties who may desire a lake trip can take advantage of this arrangement. Tickets can be purchased at Wabash Ticket Office, 109 Adams street, or at depot, Dearborn Station. Telephone Harrison 4500.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

BEANS sown early and well cultivated escape many of the troublesome beetles and other insects infesting weak and late sown plants.

LOOK out for the first appearance of the tomato worm (Phlegethontius quinquemaculata) on tomatoes, potatoes and other plants of the solanum order. Often when seen early diligent hand-picking will check the attacks of these insects in the early stages, preventing much trouble and mischief later.

GEO. J. REICHERT, late of Buffalo, N. Y., is now located on a 20-acre farm at Bowmansville, 12 miles from that city, and intends to grow garden truck, as his farm is considered one of the best in this vicinity. He will shortly erect greenhouses for winter vegetables and flowers and intends wholesaling cabbage, cauliflower, celery and other seedlings.

INSECTICIDES have to be very strong to kill mature insects, and the plants are apt to be injured thereby. But if the insects are got after when they are quite young a much milder poison does the business for them and is perfectly harmless to the plants. This is especially applicable to insects that later in the season develop a tough hide like the cabbage bug. Leaving old cabbage plants standing on the ground after they have ceased to be of value is likely to breed these pests.

Biting and Sucking Insects.

Two groups may be made of injurious insects as far as their eating habits are concerned, that is, they are either biting or sucking. In the latter group are included those insects which injure the plants by inserting their tube-like mouth parts through the bark of the plant into the softer tissue and sucking up the sap of the plant, according to Bulletin 68 of the New Mexico College of Agriculture. All of the aphides, or plant lice, San José scale, squash bug and chinch bug are good representatives of the sucking insects. The biting insects are those that have well developed mouth parts and which chew and swallow some part of the plant or fruit as their food. The caterpillars commonly known as worms, grasshoppers and beetles are good examples of the biting insects.

Poisonous insecticides, such as Paris green, arsenate of lead, and other arsenical mixtures which can be applied to the part of the plant that is eaten by the insect are the surest remedies. These remedies cannot be used effectively on sucking insects because they do not chew and swallow their food. A mixture that kills by contact with the insect body, such as the kerosene emulsion, soap solutions and lime sulphur wash should be used for the sucking insects. Before applying any of the insecticides a thorough knowledge of the eating habits of the insect injuring the plant should be had. If it is found to be a biting insect, use some one or more of the arsenical mixtures. If, on the other hand, it is a sucking insect then use the emulsions or washes.

South Manchester, Conn.

The Cheney Farm has a 4-acre strawberry patch that looks as though the ground were covered with snow. Never did we notice such a heavy set of bloom. Temperatures are low, down to 42° May 23, and the sun has hardly been seen for a week. Apples are blooming very heavily this year all through the New England states. A house of Comet tomatoes here is attracting growers in this vicinity. The stems are 1-inch caliper, fruiting heavily.

The partnership of the North & Nettleton Greenhouses has been dissolved, Mr. Nettleton succeeding. Mr. North has settled in Florida.

John Cheney, of Manchester Green, is offering a fine lot of bedding plants, but the cold weather is checking sales.

Thos. L. Brown is getting around again after an attack of grip. B.

Pittsfield, Mass.

T. L. Lowden & Sons have started their two-horse team (double-decker) of flower and vegetable plants on the road. They have also appeared on the street with a new wholesale vegetable wagon.

The plant season has opened up well in the Berkshires. Apple and pear trees are in bloom and form quite a riot of color. The weather is grand.

Nelson Volen has resumed his duties with Foster I. Drake, having been laid up for a few weeks with an injury to his back.

Wm. and Chas. Luce are bringing in rhubarb and bunch onions, Silas Briggs rhubarb and asparagus.

Strong Bros. are on the road with tomato plants in boxes containing 12 plants each. L.

Johnstown, Pa.

The Riverside Truck Farm has sold over 5,000 pounds of lettuce this season out of a house 32x100 feet. H. H. Mishler, the proprietor, will erect two more houses this summer, one lettuce house 40x125, and one plant house 12x60 feet. These are being purchased from the J. C. Moninger Co., Chicago. His intentions are to raise early plants and fancy lettuce.

D. Mishler, Jr., is now engaged in the truck business. He is going to add new houses to his present plant, one 32x100 feet for lettuce, one 12x100 feet for plants. M.

Prices of Indoor Fruits and Vegetables.

The prices of indoor vegetables at leading points May 22 were as follows: New York, cucumbers, 50 cents to $1 per dozen; mushrooms, 75 cents to $1 per pound; mint, 35 to 75 cents per dozen bunches; radishes, $1.75 to $2 per 100 bunches; tomatoes, 25 to 30 cents per pound; grapes, $1.15 to $1.50 per pound; cantaloupes, $1.50 each. Chicago, cucumbers, $1 to $2 per dozen; head lettuce, $3 to $6 per barrel; mushrooms, 40 to 85 cents per pound; tomatoes, 10 to 20 cents per pound; radishes, 40 to 60 cents per dozen bunches; grapes, Gros Colmar, $1 to $2 per pound; peaches, $15 per dozen; English melons, $15 per dozen; peppers, 30 to 75 cents per dozen; rhubarb, 6 to 10 cents per pound. Kansas City, cucumbers, 65 cents to $1 per dozen. Cincinnati, cucumbers, 50 to 60 cents per dozen; mushrooms, 40 cents per pound. Boston, cucumbers, $3.50 to $4 per box.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N. Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June 9-11, 1909

NORTH WALES, PA.—The nursery of Thaddeus N. Yates & Co. here has been sold to Wm. Frost of Holmesburg.

LOVELAND, COLO.—The Loveland Nursery Co. has been incorporated with capital stock $5,000 by N. A. Cramer, C. H. Egge and H. A. Gooch.

THE American Peony Society's annual meeting and exhibition will be held at Cottage Gardens, Queens, L. I., N. Y., June 8-9. Queens is about 30 minutes' ride from New York city.

MARSHALLTOWN, IA.—In the opinion of those qualified to speak there has been no damage to peach trees occasioned by the recent freeze, the flowers not being sufficiently forward to be injured.

OSKALOOSA, IA.—Abner Branson, who has been in the nursery business since 1867, has purchased 15 acres of the old Gruwell farm lying east of Forrest cemetery, where he will establish the Mahaska Nursery and Fruit Farm.

THIS is the hatching season of the tussock moth, and the small caterpillars should be looked for any time this month. Jarring small trees to shake them off and spraying with dilute arsenical preparations are recommended.

BOSTIC, N. C.—The Valdesian Nurseries report all nursery stock looking well. Orders for next fall are already coming in and the indications are that the demand will be greater than ever before. Two-year stock is putting on fine growth and the stock of all varieties is very large and in fine condition, having been greatly helped by the recent rains.

American Association of Nurserymen.

The thirty-fourth annual convention of the American Association of Nurserymen, which, as already noted, is to be held in Rochester, N. Y., June 9-11, promises to be one of the largest and most interesting conventions ever held in Rochester. This city being the nursery center of the world, nurserymen all over the United States are looking forward with interest to the coming meeting. Plans for the entertainment of the numerous visitors are being made by the nurserymen of Rochester and western New York. It is expected that 500 will be present.

The programme for this year's convention will be one of exceptional merit, as the programme committee, of which J. M. Pitkin of Newark is chairman, has taken great care in the selection of those who are to speak. Among those who have sent in assurances that they will speak are Professor L. H. Bailey of Cornell University, Commissioner of Agriculture R. A. Pearson of Albany and Professor W. H. Jordan of the Geneva Experiment Station.

Headquarters of the convention will be at Hotel Seneca, and the business of the convention will be transacted at the morning sessions. Addresses will also be given at these sessions. The afternoons and evenings will be devoted to sightseeing, recreation and enjoyment. For the entertainment of the visitors on Wednesday afternoon it is planned to take them on a tally-ho ride through the city and parks, including the far famed Highland park. On Thursday afternoon the women who attend the convention will be entertained at the Genesee Valley club at a luncheon. In the evening they will

Chas. J. Brown, Rochester, N. Y.
President American Association of Nurserymen.

be entertained at one of the local theaters, while the men will be guests at a smoker, which promises to be one of the features of the entertainment end of the convention. There will be a short business session Friday morning, after which the delegates will visit nurseries in and about Rochester.

The president of the association is Charles J. Brown of Brown Bros.' Nursery Co. George C. Seager is secretary, and C. L. Yates is treasurer, all of Rochester. The vice-president from New York is William Pitkin, a member of the Chase Bros. Nursery Co. of Rochester. Members of the trade have long been holding conventions, as is indicated by the number "thirty-fourth." George C. Seager has been secretary of the association for 18 years and has had a hand in the arrangement of all conventions. Assisted by and working with able committees he will be enabled to give the nurserymen the time of their lives.

Cup Awarded The Jackson & Perkins Co., Newark, N. Y., by the National Rose Society of England for the Best Climbing Rose, Dorothy Perkins.

The Nickerson Cup.

AMERICAN SUCCESS IN ENGLAND.

The accompanying illustration shows the Nickerson cup awarded to Jackson & Perkins Co., Newark, N. Y., by the National Rose Society of England for Dorothy Perkins rose which this firm originated and introduced, as "the best pink climber, blooming in clusters." Last year 12 of these cups were distributed under the auspices of the National Rose Society as the result of a contest for the best roses in different classes. There were two varieties only, Mme. Alfred Carriere and Frau Karl Druschki, which received more votes in their respective classes than Dorothy Perkins. Crimson Rambler received less than one-half as many. None of the other Wichuraiana or Crimson Rambler seedlings came within hailing distance of one of the cups, and Dorothy Perkins is the only rose of American origin which received this distinction at the hands of the National Rose Society of England.

Notes From the Arnold Arboretum.

The swelling buds of Cornus Florida, the various species of pyrus and other early-blooming trees and shrubs at last announce the arrival of spring, and the prunuses, loaded with bloom, add emphasis. The weeping prunuses near the main entrance are a beautiful sight and the later varieties in the same group will be in full bloom when these notes are read. The flowering crabs and pears on the opposite side of the drive need only a few days of real May weather to become a mass of white and pink, and a week or ten days will bring the lilacs and the white and red flowered Cornus Florida.

A new spirea, supposed to be a chance seedling of S. arguta, is attracting flattering attention from all who visit the nursery. The plant, which was sent in by Prof. Waugh, blooms at the same time as S. arguta, but is more graceful in form and more free in bloom. It would seem much superior to its supposed parent and should easily displace it on the nursery lists.

Perhaps the largest lot of Aesculus Chinensis in America is to be seen in one corner of the cold frames. The trees are only infants, but old enough to show their beautiful foliage. We were also shown another variety of the Chinese chestnut that seems even handsomer in foliage and less susceptible to late frosts. The large planting of rhododendrons and kalmias at Hemlock gorge came through the winter in fine form and are well set with buds. It is intended, we believe, to plant the hillside opposite with the seedling rhododendrons from Corea and China. There are many thousands of them, and if only a percentage prove hardy they will in a few years make a grand display.

Everybody's friend, Jackson Dawson, has been afflicted by his old enemy,

bronchitis, for several weeks, but is up and around as usual.

A visitor connected with the trade could not well leave the grounds without another look at the seedlings of the Wilson collection from western China. Since our last visit most of the young plants in frames have been transferred to the nursery rows, but the greenhouse is still full to overflowing with the youngsters in seed pans. We notice two new walnuts among the arrivals. The nuts of both are said to be edible, the trees are supposed to be hardy here, and the foliage of one is especially handsome. We failed to itemize, in our last notes, the large number of clematis, pinus, thuyas, ligustrums and philadelphus contained in this interesting lot of seedlings. A lot of cuttings sent over by the same collector are striking nicely and another lot is due to arrive soon.

Mr. Wilson, after seven years in China, is about to return to America. An interesting tale is told of one of the reasons of the success of his work in the wild regions of the Chinese and Thibetan frontier. The natives believe he is mad. They think any man who spends years in the collection of seeds of their common trees and shrubs must be crazy, and as their traditions and customs command them to respect one so afflicted, he has been enabled to do about as he pleased without interference. Looking at the results of his years of work, there would seem to be "method in his madness." Mr. Purdon, also of the arboretum, has arrived at Pekin, where he is asking for permission to make his trip through northern China. If the consent of the Chinese government can be obtained, it will open to him a vast area of entirely unexplored country.

Nurserymen's Convention—Rochester, N. Y., June 9-11, 1909. The Niagara Falls Route.

Nurserymen on their way to this meeting are requested to use the "Wabash Niagara Falls Short Line" which provides excellent accommodations from Chicago in connection with the West Shore. Leaving Chicago at 12:06 noon in the famous Continental Limited, you arrive at Rochester the following morning at 7:05. Through sleeping and dining car service. If you prefer the 3:00 p. m. train you reach Rochester the following morning at 10:30. The return service is fully as good. Stopovers are permitted at Detroit, Niagara Falls and Buffalo, not to exceed ten days at each point.

Delegates can purchase tickets of the Wabash Railroad for $19.50 to Buffalo and the fare from Buffalo to Rochester and return is $2.76, making a rate of $22.26 for the round trip from Chicago. Tickets from Chicago to Buffalo and return are good between Detroit and Buffalo by boat in either direction and parties who may desire a lake trip can take advantage of this arrangement. Tickets can be procured at Wabash Ticket Office, 109 Adams street, or at depot, Dearborn Station. Telephone Harrison 4500.

FRANK OECHSLIN

2570-2606 W. Adams St., Chicago.
Formerly Garfield Park Flower Co.

BENSENVILLE, ILL.—W. F. Dunteman is building two new houses, 27x200 feet, for violets. He is planting an acre of asters, is cutting some 2,000 carnations and 15-20 dozen snapdragons each day.

NEW HARMONY, IND.—Wm. Hartman says trade has been good here ever since the new year and April and the early part of May were especially good. Outdoor work has been delayed on account of wet weather.

LAFAYETTE, IND.—The Indiana Experiment Station proposes to erect this summer a leanto conservatory 15x48 feet and an even span connecting house of 11x20 feet for the botanical department. The main greenhouses will not be built for some time to come. A new station building, costing $100,000, has recently been occupied and the greenhouses are to be attached to the rear of the building and erected as soon as funds are available.

"BUSINESS NECESSITY"

Edition of 1909, Postpaid, $3.00.

THIS is the only term which describes the American Florist Company's Directory, just out. This book, 548 pages of facts tersely told, is issued annually and is an aid to business and money making which no wholesaler or traveling salesman can afford to be without. It contains the name of every Florist, Nurserymen and Seedsmen, arranged both by states and towns and alphabetically; and lists of experiment Station Horticulturists, Landscape Architects, Horticultural Supply Concerns and Leading Foreign Firms. It will save many times its cost by enabling you to cover America with your catalogue and at the same time waste no printed matter or postage on dead names.

AMERICAN FLORIST COMPANY,
324 Dearborn Street CHICAGO.

A Ready Reference Manual.

BEVERLY, MASS.—J. W. Philbrick will locate in the small store building which is being erected on Abbott street.

BATAVIA, N. Y.—Mrs. Katherine McGuire, mother of the New York Central florist, T. McGuire, died May 14 at her home in Albion.

HARTFORD, CONN.—The season here is fully three weeks late and stock moves slowly. The retailers are making fine displays of pot plants and cut flowers. —T.

WINSTEAD, CONN.—The business outlook for Memorial day is good and quantities of plants will be sold. Some of the large growers are supplying dealers and private parties at the same price.

MONTCLAIR, N. J.—Chester Jay Hunt, president of the Garden Society, has had a remarkably fine display of tulips this season, so good that it has called forth the admiration, not only of local florists, but also of traveling men from Europe.

NORWICH, CONN.—Jacob Reid, who has been gardener to the late Mrs. John Mitchell of this place for the past eight years, has taken charge of the Bradley estate as manager and head gardener. The estate is a large one, situated on the banks of the Connecticut river in Brattleboro, Vt.

Write us for prices.

Lager & Hurrell, Summit, N. J.

Walden, N. Y.

Business around here has opened up well with the prospect of cleaning up everything with a flower on for Memorial day. Cemetery cleaning and fixing up is coming on in good shape. Carnations will fall short of the demand. Deutzia gracilis and D. Lemoinei will be in and that will help out to some extent. We have had a lot of rain here holding back all kinds of outside planting. Vegetable gardening around here is taking a great number of tomato and other plants.

The Walden Floral Co. with Wm. P. Kestloo as manager has not commenced on the new houses yet.

MAC.

Katalog for the asking.

Let us hear from you.

SKIDELSKY & IRWIN CO.,
144 N. 7th St., Philadelphia, Pa.

Geraniums..

5000 S. A. Nutt, Mme. Barney, La Favorite,
In 2¼ and 2½-inch pots
Strong, healthy stock.

WOODWORTH & PARKER,
GENEVA, OHIO.

Newton Highlands, Mass.

The season here is very backward and very little is doing as yet in bedding out. From present appearances flowers for Decoration day will be scarce. Outside of funeral work there is little doing in the flower trade. It has been a remarkably favorable spring for the nurseryman, the conditions being nearly ideal for planting. Peonies are nearly a week late but lilacs will hardly hold until Memorial day. F.

Phoenix Canariensis,

IN TUBS
3-ft. at $2.50 each.

Dracæna Indivisa,

7-in. pots, fine stock, 2½ to 3-ft. high, at $7.00 per dozen.

EVERYBODY BUSY.

Everybody is rushed and, as usual when things do turn brighter, it comes and finds us not prepared. The retail stores are all working to their fullest capacity; funeral work takes a large part, but orders for bedding plants are the most troublesome and least profitable, and many of our first-class stores would be glad if this trade could be done by the growers entirely. This would give them a larger profit and rid the retailers of a lot of trouble without much loss.

The first monthly exhibition of the Gardeners' and Florists' Club, held at the club rooms, proved to be an unexpected success; there was a large entry list and the flowers shown were of a very high class. The awards follow:

Twelve pansies.—Hall and Robinson, first.
Twelve sweet peas.—J. Eddy, first; Hall & Robinson, second.
Six antirrhinums.—J. Miles, first; J. Eddy & Son, second.
Six carnations.—J. Kean, first.
Six roses.—J. Kean, first; E. Hibbs, second.
Special prizes were awarded to Hall & Robinson for six Killarney roses; J. Kean for a vase of carnations and J. Luck for a vase of marguerites, Queen Alexandra.
First prizes were won by G. Miles for Oncidium varicosum.

Two children of James Kean were severely injured by the explosion of a cap of dynamite; ill luck seems to follow the lad who exploded the dynamite. Only a year ago he fell off a sink into a glass, severely lacerating his face, marking it for life, and now he has lost his thumb and two fingers of his left hand.

A. Asselman is going to build a greenhouse 25x100 feet for general plants.

LUCK.

Northampton, Mass.

The town of Hadley is to lay a line of pipe to East Hadley this summer to supply the immense greenhouses which A. Montgomery is going to erect at the latter place. It is understood that fine roses are to be a specialty, as the soil seems to be adapted to them.

Field, Parks and Sinclair, at the center, report cut flowers fairly active and good call for bedding plants. F. D. Keyes is kept hustling all of the time with design work.

Plant trade is brisk at the Bridge Street Greenhouses, although the cold weather has retarded sales somewhat.

Chas. Lewis reports business from his greenhouse as brisk.

G.

CHITTENANGO, N. Y.—Owing to the closing of local industries trade has not been as good as it might be, according to A. R. Ellis, but he is still selling more than he can grow and intends building this summer. Plant trade has been especially good and prospects for Decoration day are excellent.

GLAZING POINTS

Are positively the best. Last forever. Over 30,000 pounds now in use. A sure preventative of glass slipping. Effective on large or small glass. Easy to drive. Easy to extract. Two sizes ⅝ and ⅞. 40c per lb., by mail 16c extra; 7 lbs. for $2.50 15 lbs. for $5.00 by express. For sale by the trade

RANDOLPH & McCLEMENTS, Successors to Chas. T. Siebert, Baum & Beatty Sts., Pittsburg.

ELIZABETH, N. J.—Henry Leahy is out with a magnificent new delivery wagon. The rear part of the wagon is of glass, this constituting good advertising as the quality of the flowers can be seen by all.

BRISTOL, CONN.—There are fine shows of cut flowers in the retailers' windows, but sales are slow. Cool, cloudy weather has prevailed all through April and so far in May, and the season is quite three weeks late.—T.

JACKSONVILLE, FLA.—C. A. Mason had the decorations at the Shriners' banquet May 14, and these were very elaborate and good; about 200 palms and pot plants were used, 1,500 carnations and quantities of southern smilax. Many congratulations were tendered Mr. Mason.

WINSTON SALEM, N. C.—The Fallon Floral Co., of this city, owned by John Fallon, of Staunton, Va., and Frank Fallon, of Roanoke, Va., changed hands May 18, when the owners sold the complete plant to Martin McNulty, who has been the company's manager here since its establishment about a year ago, the consideration being $15,000. The sale of the plant here does not affect the Fallon greenhouses in Virginia and they will be continued as heretofore.

Natural Guano Company, Aurora, Ill.

Worcester, Mass.

The show of the Worcester County Horticultural Society May 20 brought out some fine tables of flowers. Geo. McWilliam had two tables of lily of the valley and pansies, which were much admired. M. J. Whittall had six calceolarias of exceptionally good quality. The tulip displays, both double and single, were very good. The awards were as follows:

Cut flowers: Mrs. J. C. Whitin, first; Allyne W. Hixon, second; Mrs. Simeon E. Fisher, third; Mrs. A. E. Underwood, fourth.

Pansies: Charles Potter, first; Mrs. Percy G. Forbes, second; Mrs. J. C. Whitin, third; Mrs. H. R. Hildreth, fourth.

Zonal geraniums: H. F. A. Lange, first; E. W. Breed, second; Allyne W. Hixon, third; H. B. Watts, fourth.

Gratuities: W. A. Bazely for Dimorphotheca aurantiaca and geranium seedlings. Mrs. J. C. Whitin, Dendrobium thrysiflorum. M. J. Whittall, display of calceolaria.

Wild flowers: C. E. Boyden, first; Allyne and Stanley Hixon, second.

Tulips: E. W. Breed, first; Mrs. Edward Warren, second; Mrs. Percy G. Forbes, third; Mrs. E. J. Whitney, fourth.

Lily of the valley and pansies; G. Marston Whiting. R

Pittsburg.

TRADE UNSATISFACTORY.

The market this week has been a continuation of last, very unsatisfactory. Wagonloads of flowers are being moved daily but at figures that do not look well on paper. Lily of the valley is moving very slowly, due partly to the field stock that is swamping the market, selling at 15 cents per 100 and down. Sweet peas are no longer holding their own, their downfall being caused on account of arriving in very poor shape. Prospects for Memorial day are very good. The plant trade, in fact, has never been better.

NOTES.

Anton Krut of Butler is cutting sweet peas in unlimited quantities. He states business has been very satisfactory with him.

Mrs. E. A. Williams had a very novel window display last week of dogwood blossoms, yellow daisies and ferns.

B. A. Mick of Wellsville, O., who has been out of business for some time, has opened a new store at that place.

The Breitenstein Co. is handling all kinds of plants and shrubbery, a new enterprise for this firm.

J. J. Fuchs, of the south side, reports several large funeral orders last week.

The Southview Floral Co., of Carrick, is cutting some fine Chatenay roses.

Mrs. Elicker of Homestead, who has been ill the past week, is around again.

The New York Cut Flower Co. reports plant business very good.

Visitors: E. J. Fancourt of S. S. Pennock-Meehan Co., Philadelphia; Anton Krut, Butler; the Misses Keeney, Monongahela. J.

Syracuse, N. Y.

Bellamy Bros., successors to L. E. Marquisee, are busy moving their greenhouses from Delaware street to Onondaga avenue, to make way for a new residence. It is expected that the building operations will cover a period of two months and the firm, when it is finally located, will have a new office building on the Onondaga avenue site. The moving will not interfere with the business. At the present time Bellamy Bros. are working on several new seedling carnations and report that they are coming along well. They report a good demand for plants for outdoor flower beds, a liberal amount of funeral work and a fair sale for roses, carnations and sweet peas.

P. R. Quinlan, head of P. R. Quinlan & Co., has just returned from a trip to Venezuela, where he went in the interests of his asphalt business. Mr. Quinlan says a native of Venezuela told him that the acts of ex-President Cipriano Castro had hurt that country.

Because of backward and cold weather retailers and growers of this section are in doubts of being able to take care of the Memorial day trade. Although there have been no frosts the cold has retarded growth. Lilacs will be available and some tulips, but peonies are doubtful.

Funeral work at the beginning of the week was good. A. V. B.

BUSINESS GOOD.

Business the past week has been very good, all stock moving fairly well, carnations and white roses having the best call. Long American Beauty and Richmond roses had a good call, and the quality was never better. Iris is plentiful, but does not bring the price for the quality shown. Gladioli move slowly. The demand for Easter lilies has been very good, but they were hard to get. Callas also had a good call. Smilax was in demand, being used in the churches on Sunday.

NOTES.

John Blechschmidt, the Miles avenue carnation grower, has sold his range of houses to a Mr. Hoffman, who will continue the business beginning June 1. Mr. Blechschmidt goes into his new houses at this time.

C. B. Wilhelmy has purchased the greenhouses next to his on W. Twenty-fifth street, formerly occupied by F. C. Witthuhn. Mr. Witthuhn will move across the street to new quarters about September 1.

Mrs. Amber Phillips of the Home Gardening Association is engaged in establishing gardens in connection with the day nurseries in this city.

The Neal Dow W. C. T. U. held a meeting Tuesday at which plans were made for flower mission day.

C. B. Wilhelmy, 3610 W. Twenty-fifth street, was presented with a fine baby boy Saturday morning.

F. H. Moritz has a fine lot of hydrangeas for his Decoration day trade.

C. F. B.

Washington.

WORK FOR SCHOOL EXERCISES.

The season of commencements is here; the retailers are busy with decorations, and are rapidly booking orders for bouquets and basket arrangements to be used at the closing exercises of the various schools and seminaries. The president and leaders in official life are still here and will be as long as congress stays, but every day adds a few more to the closed houses of the fashionable district. It is expected that there will be a good sale of made-up cemetery baskets, as well as other decorative materials; owing to the fact that Memorial day comes on Sunday, the retailers no doubt will have three busy days. The increase in temperature and the copious rains have come as a godsend to the grower, and it is expected that there will be sufficient outdoor stock to supply the great demand for Memorial day. The first water lilies of the season were seen in some of the stores the past week, and outdoor sweet peas are brought to the city in great quantities, a fact which has helped to decrease the price of them to a great extent. There are a goodly number of fine gladioli and peonies to be secured. American Beauty roses are rather scarce and in poor condition.

G. S.

Boilers, Tubes, Flues, Etc., at Wrecking Prices!

If you intend to increase the size and capacity o your greenhouse or make any repairs for the coming winter. be sure and write for our low estimate on your requirements before placing your order We have just purchased at a forced sale **50,000,000 ft. This Range is at Pomfret, Conn.

The Superintendent is Mr. John Ash who has such an enviable reputation for his successes with fruit, especially potted, grown in this range.

His orchard house is the curvilinear one at the right. When the crop is off he uses the house for 'mums—some forty varieties which were culled from over a hundred he imported.

Since taking this photo, we have erected what Mr Ash says is "an ideal rose house." It is connected by a passage to the work room at the left and is our Sectional Iron Frame Construction like the rest of the houses.

If you want to know the particulars about this rose house or any part of the range—will be glad to hear from you.

Central Trust Building, 4th and Market Streets, Philadelphia, Pa.

Morristown, N. J.

Fifty-two members of the Morris County Gardeners' and Florists' Society met May 12 to hear Dr. F. G. Lipman, of the New Jersey Agricultural Experiment Station, of New Brunswick, lecture on "Soils and Fertilizers." The doctor has been working hard at the station and throughout the state in this line for the past 15 years, so he was of all men well fitted to tell us a few things. This he did in as simple a manner as possible. He was really eloquent without any effort and we can well ponder on and profit by what he said.

How to get large crops from grounds that have been somewhat exhausted at a minimum of cost is the problem, and to succeed to any extent one must understand somewhat what is needed in the soil to produce a given crop, and then try to supply that want as economically as possible. The glass ranges of the station are being increased and there will be an increase later in the special crops grown under glass, and then the florist may hope to get special benefits, as do now the farmer and gardener. An after discussion took place, and many questions were answered by the doctor. A rising vote of thanks was given the speaker for his able discourse.

We had quite an attractive informal exhibition. Wm. Duckham had a fine lot of shrubs in flower as well as herbaceous stock and spring bulbs. Alexander Brown, gardener to G. Macculloch Miller, had a fine lot of antirrhinum and Alexander Michel had a fine lot of tulips, as did F. G. Neipp of Chatham. John Dunn, Wm. Wilscherg and Alfred Neipp were elected to membership. The next flower show will be held October 27-28 at Assembly rooms, Madison. The schedule is being revised by the executive committee. The club is to affiliate with the New York Florists' Club, on the occasion of its outing. A good time is anticipated. E. R.

PLATTEVILLE, WIS.—Wm. A. Schaefer reports that business has been good right along, especially at holidays and Mother's day. He will erect a new greenhouse 26x100 feet this summer.

HADDONFIELD, N. J.—John Brown of 31 East Main street disappeared May 15 and much concern is felt by his wife and friends at his continued absence. Mr. Brown had been in poor health for some time previous to his disappearance.

DE SOTO, MO.—G. M. Thost has torn down his old greenhouses on North Main street and erected a more modern plant in a better location. He is growing carnations and chrysanthemums for the St. Louis market and has had fine crops of late. Just now he is busy planting chrysanthemums. All his stock looks well, especially the young field carnations.

A FLORAL PILLOW.

THE AMERICAN FLORIST

America is "the Prow of the Vessel; there may be more comfort Amidships, but we are the first to touch Unknown Seas."

Vol. XXXII. **CHICAGO AND NEW YORK, JUNE 5, 1909.** **No. 1056**

THE AMERICAN FLORIST

TWENTY-FOURTH YEAR.

Copyright, 1909, by American Florist Company.

Entered as Second-Class Matter Nov. 11, 1891, at the Post Office at Chicago, Illinois, under Act of March 3, 1879.

PUBLISHED EVERY SATURDAY BY

Our Supplements.

Subscribers should see that they get copies of the fine supplementary illustrations showing high grade design and decorative work. These fine supplements appear with each issue and should be carefully preserved, as they mean much to the retail florists in dealing with their customers, illustrating as they do the various kinds of work that the every day florist is called upon to perform.

The papers in which the supplements appear should be likewise preserved, as they contain much valuable data with regard to these special illustrations. Subscribers should see that they get every issue, as otherwise they may miss some of this high grade work.

SUGGESTIONS FOR CUT FLOWER GROWERS.

Sweet Peas.

Late sweet peas under glass must be carefully looked after and kept growing as long as possible as it will be some time before the outside rows are ready. The root action has to be kept up and heavy watering and feeding are not good in this respect, but sufficient water and feed are necessary to maintain a vigorous growth, or the flowers will get smaller and poorer in substance right along. Some shading will be necessary, especially in small houses, but a very heavy shade robs the flowers of color and substance. The houses cannot, of course, be kept too cool now, plenty of air night and day being required. The principal need of the outdoor crop now is frequent cultivation between the rows. See that support is given in good time to late rows and, should there be any doubt as to the soil being good enough to carry the crop, mulch with good manure or give a good sprinkling of superphosphate and sulphate of ammonia.

Outdoor Plantings.

With the beginning of June, the danger of severe frost, sufficient to damage any stock planted outside, is practically over and the work must be rushed to completion as soon as possible. Those growers who have made good time with carnation and aster planting will have this all out of hand and can turn their attention to the tender stock. Dahlias are an important crop to many and, as their seasons in most localities is only too short, the plants that have been hardened and prepared as described in previous notes should be planted out without delay. Give the plants at least three feet between them both ways, and more between the rows if possible. Plant carefully, opening good holes with the trowel and firming the plants well; nothing is gained by rushing this part of the work. If the plants have been kept well supported the stakes in the pots can remain until planting is finished, but if these are small and insufficient a man should come behind the planters and stake and tie the plants. See that plenty of room is left in the ties, or, as the stems swell, the tie will bind and injure them. Water thoroughly and, after all are tied, loosen up the soil around the plants with a hoe and leave all tidy.

Forget-Me-Nots.

There is always a demand for a few of these flowers and a number of cuttings should be made now of the small side shoots that are crowding around the old plants. There are usually a few roots on these divisions and they may be set out now on prepared beds in the open at six inches apart each way. Give a good watering after planting firmly and if the work is carefully done hardly a plant will miss. Forget-me-nots should be given a good open position and delight in a moderately heavy and fairly moist soil. In a light rich soil they grow very freely at the start and make strong, sappy plants but are often attacked with mildew in hot weather. Plants that grow more slowly are more vigorous and usually escape. Cultivate the soil between the plants regularly until the ground is nearly covered and a fine lot of stock, suitable for planting in the benches inside in November or in sheltered beds outside, will be the result.

Tulip Bouton d'Or.

After the bulk of the yellow narcissi are over yellow tulips are in good demand and around Memorial day there is probably no better yellow kind in existence than the single Bouton d'Or. We have seen beds of this tulip this season that flowered abundantly last year, were simply left alone as far as culture was concerned and have produced a magnificent lot of flowers again this time, some of the bulbs that threw one flower last year producing five and six in some cases and averaging four this time. They were grown on light, sandy soil, not particularly rich or good and as a good many of the flowers retailed at two and three cents each there is certainly money in them. This is no fancy picture, but the actual results of leaving the old beds from last season, and growers who are thinking of throwing away the bulbs that have flowered may well think

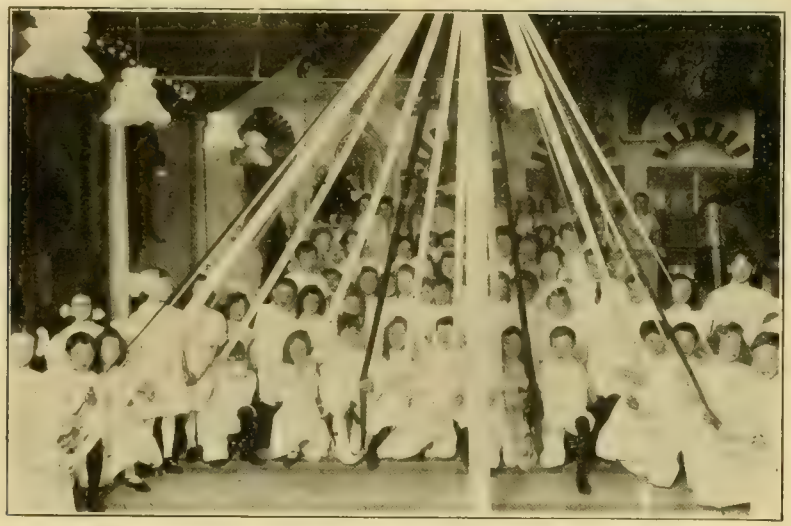
again before doing so. Bouton d'Or is a good bright yellow, the flowers stand up on good stems and, grown under these conditions, they last a very long time. A good succession of flowers is provided from the same bulbs, though the secondary ones may not be quite as good as the first. There are few places in which room could not be found for a few thousand of this and other good May flowering tulips. Planted at six inches apart the bulbs can be left two years at least, probably three, when they may be taken up, divided and replanted in fresh soil.

Bouvardias.

The summer outdoor quarters for bouvardias should be well prepared and it is better to defer planting a few days than to plant on lumpy, ill-prepared soil. The roots of this plant in the earlier stages are very fine and delicate and these need fine soil around them. While not recommending planting in very bleak, windswept positions the bouvardias must have plenty of air and should not be grown under the shade of trees. Distant protection by trees or buildings or by the natural conformation of the ground is all right, but free exposure to air is necessary to build up good, well consolidated growth that will answer to a little gentle forcing in early winter. The soil should be in good heart and any falling off in this respect must be made good by adding well decayed manure. Fresh strong manures must not be used as they force the growth unduly, and most of the varieties, especially those of the Humboldti and Jasminoides section grow strongly enough outdoors without this. From the first, pinching the shoots to form a bushy well balanced plant should be attended to. The shoots in the white varieties mentioned grow naturally more erect than those of the Vreelandi types, these being more spreading. But the former are very free growing so both must be given good room so that the air gets well around each plant. Plant firmly, water the plants home and, should the weather prove hot spray the heads regularly to keep green fly in check, and cause a free break. Owing to the constant manipulation of the growth necessary, bouvardias should be planted on beds about five or six feet wide so that the plants may all be reached without treading on the soil in wet weather.

Planting Chrysanthemums.

When the plants and benches are both ready the sooner the early chrysanthemums are planted the better. Some growers still persist in using soil that is of no value for any other crop for chrysanthemums, depending upon feeding afterwards with liquid manure to get depth and solidity in the blooms. This is wrong from all points. New soil cannot be provided for every crop, and these plants are long suffering in this way and give fair results in soils that would be useless for roses. But it is always better to use at least a part of new soil with the old. Manure, neither in the soil or later in a liquid form, cannot altogether make up for a deficiency in the soil; otherwise we might go on with the same soil indefinitely and use manures best suited to each crop. Practical growers know this to be a fallacious idea. When there are plenty of plants and long-stemmed flowers are needed it is better policy to plant two or three in each station at one foot apart than to plant single specimens closer. This leaves more room to cultivate between the plants in the earlier stages without damaging them. Never let the plants get hard and potbound before planting out, as they stand still in such cases and are losing time. The early kinds have only a short season to grow and everything possible should be done to prevent a check such as this entails. That old favorite, Ivory, is still one of the finest earlies. It may be planted closer than most varieties, owing to its small foliage and is always a profitable kind to grow. Virginia Poehlmann is a quick producer, stands close planting and is a fine globular flower when well finished. October Frost, Golden Glow, Pacific Supreme, Robert Halliday and Polly Rose are all good in their respective colors and these may all be planted now. After planting, the grower must be careful with the watering. There is no need of soaking the soil all over the bench, as there are no roots in it to take up the moisture and the only result is to make it sour and unfit for the roots to enter. On the other hand, if kept on the dry side a much better rooting system will result and the growth will be more satisfactory in every way.



UNIQUE ADVERTISING.

May Party Given in H. R. Hughes' Store, Chicago.

THE RETAIL TRADE

Unique Advertising.

Probably nothing more unique in the way of new ideas for popularizing one's place of business has been attempted than the children's May party given by H. R. Hughes in his store, 690 W. Van Buren street, Chicago, on May 15. The event was well advertised beforehand, and the fact that 16 of the best fancy dancers among the 10-year-olds of the neighborhood were to be selected by means of a competitive drill caused a vast amount of interest among the juveniles, and it was soon the talk of the neighborhood, old as well as young. On the eventful day the store was cleared and the 16 dancers took their places around the 10-foot May pole which had been set up. Some 82 children were the guests of the occasion. Refreshments were served and orchestral music helped to make more joyous the already happy children as well as attract the attention of some heedless passers-by. But there was really little need of this latter, as the gay scene was plainly visible through the broad show windows and naturally attracted the attention of such as had any eyes at all. All this time customers were waited upon with the same attention and courtesy as if nothing else were going on.

Decorated Hydrangea.

SEE SUPPLEMENT WITH THIS ISSUE.

The decoration of a pot plant in a manner that will get the best possible effect from it is not as easy as it looks. The retailer who treats all plants alike, with a lofty disregard of color, habit and general appearance gets through his work at a rapid rate. He ties nice little bows of red ribbon at equal distances over his araucarias and aucubas at Christmas, is patriotic and uses the national colors on Memorial day on all and sundry plants and never stops in his hustling career to consider such side issues as color contrast, suitable receptacles for various plants or small matters of this kind. But unfortunately for his peace of mind, discriminating customers see a better class of work in other stores and leave his establishment for those where this high standard is maintained.

For plants of more or less regular outline, like the hydrangea and Indian azalea a pot cover or hamper with a handle is a great aid to the decorator, for this may be lightly trimmed with asparagus or other trailer and a knot of chiffon or gauze ribbon be used, which has a very decorative effect, yet would be totally out of place if attached to the plant itself. Plants with a clean stem or with many stems, like the rambler roses, for instance, may have the gauze or any other description of ribbon attached and it will be an improvement if the colors are well matched or contrasted. Hydrangeas

look extremely well in some of the newer forms of birch bark hampers and pot covers, the silvery gray tint of the bark showing up the green foliage and pink flowers to perfection, neither detracting from the effect of the other. There is a boldness about the plant itself that, combined with the soft neutral tints of the birch and the flowers, is irresistibly attractive and one is drawn to such an effective plant when tired of the purely showy though telling varieties.

Regarding the mat pot covers, these form a cheap method of decorating azaleas and similar subjects. More care than is common ought to be taken to prevent clashing of strong colors, otherwise not much mistake can be made. These covers are very effective used for heaths (erica). A fairly tall specimen of E. melanthera is very attractive with a light bow of chiffon towards the top of the plant and a green mat cover, and the same may be said of E. Cavendishiana and even E. hyemalis, though the latter, owing to its somewhat pyramidal habit, does not lend itself so well to the ribbon method. The whole question of plant decoration, in short, resolves itself into finding the proper and suitable decorative material to use with the various plants and using sufficient of them to give a good effect, not enough to crowd the plants and detract from the beauty of what should be the principal attraction.

Wreath of Roses and Lilies.

Photography, no matter how good, never does justice to a colored floral design and although only a glance at the accompanying illustration is sufficient to show that it represents a fine floral wreath yet the beautiful color scheme does not appear. This superb wreath was the work of Geo. Wienhoeber of the Fleischman Floral Co., Chicago, and it was in his best style. It was mounted on a rustic easel of unpeeled rods and stood over six feet high. At the bottom of the wreath were deeply tinted flowers of Lilium lancifolium rubrum, these becoming paler and fading higher up into the soft rose pink of Mrs. Potter Palmer rose, the whole forming a beautiful combination of tints we have seldom seen excelled. Good, artistic work of this class, whether in small or large pieces, should be the aim of every retailer, for when once a name for it is obtained there will be no lack of customers willing to pay the right price for it.

WREATH ON EASEL BY FLEISCHMAN FLORAL CO., CHICAGO.

Mrs. Potter Palmer Roses, Lilium Lancifolium and Sweet Peas.

Memorial Day Flowers in Chicago.

The demand for wreaths and other memorial devices started in earlier than usual this season and on all three days, Saturday, Sunday and Monday, wagonloads of fine floral pieces could be seen going to the various Chicago cemeteries. Early on Sunday the latter were thronged with people and the amount of money spent was probably far ahead of that of last year. This at least is the opinion of the principal retailers, who are in a position to know. It is customary to grumble at the peonies on Memorial day, much as we are accustomed to see the faults in our best friends, and this season was no exception. But the grumbling took such widely divergent forms that it lost some of its power of influencing the writer. "They are cut too tight." "They have been in cold storage too long and will fall to pieces." "There is no variety," and other things were said about them, but when it comes to making up big wreaths at a moderate price it would be difficult to fill their place with anything one-half as good. In some of the best stores we saw some very beautiful flowers and, judging only by memory, we thought that they compared very favorably with those of last year.

There was a grand lot of stock of all kinds on the market and the retailers purchased heavily. Carnations were not as plentiful as might have been expected and the blame as usual was cast upon the wholesalers for shipping all the best of the stock out of town. Truly at such times the lot of the wholesaler is "not a happy one." When we go out of town we are told that the Chicago wholesalers "ship any old thing out here" and save the best for the home trade, where the retailers are made independent owing to the market being close. The finest carnations we saw anywhere were at the Ernst Wienhoeber Floral Co.'s, grown by Emil Buettner at Park Ridge. They were grand in stem and color, large and fresh. Gladioli are certainly in great shape this season. The fine Gandavensis hybrids are splendid in color, large and good in every way. The favorite America is seen but does not seem at all plentiful as yet. The Bride and Childsii are still to be seen but the larger varieties quite overshadow them now. Another popular Memorial day flower is the lilac and great bunches of fresh and beautiful flowers were seen on every hand. Some splendid wreaths were noted made of lilac over the very dark colored magnolia leaves, these combining great richness with simplicity in a very effective manner.

Everyone is delighted with the sweet pea this season. The Spencer types have been grand and they fill a blank for small flowers of moderate price that formerly existed after the violets were over. Not that the best forms have been cheap by any means, for they have held up well in price and must have given fine returns to the grower. The cape jasmines were late this time and the first flowers were poor, but these are coming in much better order now though the stems are still short. In bulbous stock there are still plenty of fine tulips in yellow, white and rose. The parrot tulips are beautiful but do not seem to take the fancy of the public much. They are fine in a mass but a vase of a dozen does not look so well as the same number of the ordinary varieties. Roses keep along an even keel. American Beauty is com-

ing in small but of very fair color. Richmond and Killarney are not as good as they were, but there are some very choice Kaiserin in. The pretty little Bon Silene was noted in characteristic form and color and Mrs. Jardine seems to be rising in favor. In novelties and small flowers there is a greater variety than usual. Marigolds, stocks, pansies, Narcissus poeticus, mignonette from the greenhouse as well as the wild form, apple blossoms and many other minor stocks give the retailer a chance to please patrons with a taste for something different to the ordinary, while orchids are used in increasing quantities in the best class of work, Cattleya gigas being again in full supply.

THE ROSE.

A GROWER who has handled many thousands of My Maryland says this rose does not root as freely as most other teas, but makes a big callus in the sand, and if the callused cuttings are potted they go ahead just as well as those that have formed roots.

A Few Words on My Maryland.

Having grown a house of My Maryland this past season, a few facts regarding it may interest readers. The house contains 2,500 plants and was planted June 15. Solid beds are used throughout and all grafted stock. We did not begin to propagate from the house until November, and after December nearly all the flowering wood was taken for grafting. Blind wood cuttings were used for own-root plants, three eyes being the average per cutting. This house gave us 50,000 scions for grafting, 25,000 own-root cuttings and the following list will show the number of flowers per month. No flowers were counted that were of such poor quality as to be unsalable.

July, 1908	10,673
August, 1908	14,219
September, 1908	12,033
November, 1908	6,883
December, 1908	3,797
January, 1909	3,151
February, 1909	2,021
March, 1909	10,476
April, 1909	10,406

There has been an avearage cut of 700 blooms per day thus far in May and the prospect of an increase on this, as the house is just coming into full crop. Looking over the cut by months, a falling off from the normal cut will be noted during the months we were using the wood for propagating purposes.

The question of own-root versus grafted we cannot argue, as our plants are all grafted. Without a doubt My Maryland is a wonderful rose. It is one which pleases the public and one which can be grown successfully providing it is given a little additional heat from November until April. If grown at 60° at night the flowers will be larger than if grown at 62°, but it seems safe to say that the rose should not be allowed to go below 60°. By permission of John Cook, I quote the following from his letter of March 6: "We have kept this rose on an average of 60° and we give it plenty of water and none of the plants have stopped growing the last five years." Roses are like rose growers, and we know better how to handle them after more experience with their individual peculiarities. WALLACE R. PIERSON.

American Beauty in the East.

American Beauty plants for this season's planting should now be growing vigorously in 2¼-inch pots ready to be shifted into 3-inch for from three to four weeks before planting in the beds. This, for the majority of the houses, should be by the end of June. In planting, they should be carefully selected, keeping plants of the same size and strength together. Plant out 12 inches apart in the rows with 18 inches between each row. Personally, the writer prefers solid beds with concrete walls eight inches high, leaving the plants in from two to three years, replanting one-third to one-half each year. If possible, a sod is manured very early in the spring and plowed as soon as fit to work. It is then cultivated every week until used, bone being added in the house.

Every effort is made to keep the plants growing from the time they are rooted until thrown out at the end of the season. Cutting is commenced when, in the judgment of the grower, the plants are strong enough to stand it, being careful to cut only from such plants as are growing well. All buds not to be cut are kept pinched before opening. As soon as the plants have taken hold of the soil, it is firmed down with a rammer, usually a piece of 1-inch steam pipe. The bed is then leveled and a light mulching put on to keep the soil cool and prevent drying out. Before this, however, the beds usually have been weeded twice. In the fall a little bone and soil are sprinkled on the beds, but generally no more manure is given until spring. ALFRED BURTON.

ROSE MY MARYLAND.

Points on American Beauty Culture.

In the course of a somewhat lengthened experience in cultural matters the writer has frequently been asked how to grow certain plants and, having expressed inability to explain thoroughly in a few minutes' conversation what it has taken a good many years of careful observation to learn, has possibly been thought uncommunicative. This by the way, but, apropos, we would say that no amount of teaching on paper can make a rose grower. To be successful, and to be sure of his ground the grower must be in practice for a few years as there are little things that crop up continually, seemingly unimportant, that make all the difference between success and failure. Success in culture is an elusive quality in any case, but by watching small things and carrying out the requisite details at the proper time and in the proper manner, keeping everything right from the start the grower at least will deserve it.

PROPAGATION.

American Beauty is nearly always grown on its own roots. There is no advantage in grafting the plants for this variety makes a sufficiently strong growth at all times and the principal advantage accruing from grafting is a good and vigorous start in life owing to the stronger rooting qualities of the manetti or other stock used for grafting on. Cuttings should be made of medium sized wood in a half ripened condition, young and green or old hard wood being unsuitable. A good length is about 3½ inches. Shoots much longer than this often fail to root freely while, if they are much shorter, the leaves get down on the sand which is not desirable. The constant watering will weigh the leaves down fast enough and in order to prevent this as far as possible the cuttings should be inserted in a slanting direction. With a stiff putty knife or a similar tool make a slanting cut in the sand and insert the cuttings with the leaf on

ROSE MY MARYLAND, GROWN BY A. N. PIERSON CO., INC., CROMWELL, CONN.

the upper side. Owing to the natural angle at which they grow the leaves will then stand almost or quite perpendicular, the best position. The sand must be made very firm and the cuttings well firmed as they are inserted. They should have more room than is generally given the tea roses, about 1½ inches apart in the rows being a good distance. As soon as a few rows are in give a thorough soaking of water and see that they are kept moist until rooted. The temperature of the sand should be 65° or thereabout, that of the house about 55°.

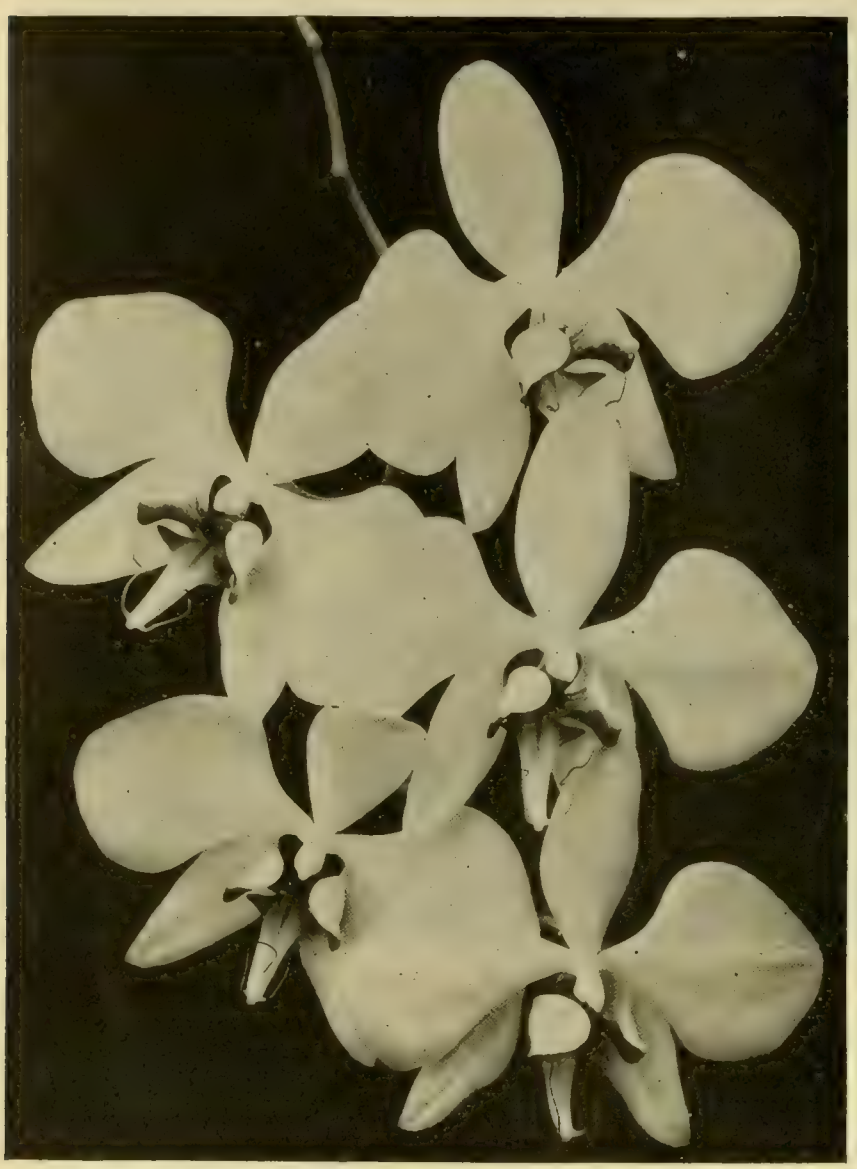
In about five weeks the cuttings should be examined and will by then probably be rooted, though 40 days or even more sometimes is necessary, much depending on the time of year. As to this, growers who raise large numbers of plants for shipping trade begin propagating as early as the middle of December and keep at it until the middle of March. But for home use or where only a moderate number of plants are needed it is better to wait until after the turn of the year, say the middle of January. They will then root more freely and the young plants will be less likely to receive a check than if rooted earlier. The aim of the grower right through the time the cuttings are in the bench must be to keep the leaves from wilting and to do this plenty of water is needed and, if the weather should be bright, light shading is also necessary. These few details carefully carried out should insure a good batch of rooted cuttings.

CARE OF YOUNG STOCK.

As noted above from 35 to 40 days should be sufficient time to root the cuttings and the young plants may then be potted into 2-inch pots. A few days of nursing treatment after potting, keeping the atmosphere around them a little close and lightly shading if bright, and the plants will be able to take care of themselves in an ordinary American Beauty temperature of say 60° at night with a crack of air on, except on the coldest nights. The success of the plants in the bench depends to a great extent upon how they are treated at this stage. Kept in a hot, moist house without plenty of air the plants will make very free and vigorous looking shoots and the inexperienced grower may imagine he has a fine lot of stock. But the class of wood that is being made under such circumstances is not the kind that is needed. It is soft and later on will be attacked by black spot or some other trouble. The wood that experienced growers like to see is hard looking, short jointed and the leaves feel rustling to the touch. The plants may not be growing very rapidly but they are growing into money and preparing for a successful career.

Even in the earliest stages, and all through the game American Beauty likes plenty of water, must have it in fact, but it is just as easy to overwater this as any other rose. Let the plants be looking for water before it is given and then give a thorough watering. Provided they are carefully selected for size when standing, then the plants in the ordinary way will dry out fairly even but this is a matter for the grower on the spot and if he sees that certain plants or certain parts of the bench are drying out quicker than others he will water accordingly. But the grower who is never satisfied unless his plants are always wet will not make a success as a Beauty grower. An occasional day's drying is good for any plant and as natural as watering and unless they get it plants get into a soft condition and ready, like children who are pampered and kept indoors, to take any disease that happens along.

About six weeks in the small pots will be long enough for the plants to become well rooted and ready for a move. With stock from cuttings inserted in January this will bring them ready in April and, if the benches can be spared at that time they may be planted at once from the 2-inch pots, thus saving the work of shifting into 4-inch. Even if they get a little hard in the pots it will do no harm. They must not be pot-bound and starved or they will be checked and it will take weeks for them to get over it. But for small stock that is to be planted out right away it is a benefit rather than otherwise for them to "feel their pots." If it is decided to repot then it should be done before the plants get hard in the pots or it will be difficult to keep the old ball of roots moist without saturating the new soil. By this it will be seen that it is necessary



PHALÆNOPSIS AMABILIS.

for the grower to make up his mind what he is going to do with his plants and do it, not be halting between two opinions while his stock is starving or drying up in the pots. Circumstances occur sometimes that upset the best calculations and the best laid plans are not always carried out, but the man who plans ahead, with the knowledge that by a certain date he will need so much room for his stock is the one who usually comes out on the the right side.

SOIL AND PLANTING.

In most cases the question of soil is not decided by the grower. He has to make the best of the soil that is to hand and improve it by adding to it whatever it may be short of naturally. A moderately heavy soil is best for roses of all kinds and the grower with such a soil at command holds a stronger hand than he with a light sandy or brashy soil through which water runs very quickly. Good cow-manure is the best fertilizer and, when the watering and other details of culture are well understood, this may be used in fairly fresh condition and large quantities, the amount depending entirely upon the soil. The preparation and composting have been frequently described in THE FLORIST, so we may consider that the soil is on the benches and ready for planting. Use plenty of help when doing this, so that the plants are not kept about on the bench to dry out in the sun. Plant firmly with a trowel at one foot apart along a line and set the plants just a little deeper than they were growing in the pots. Let the man with the hose follow close on the heels of the planters and if the weather is bright, spray the plants well overhead as well as watering the roots thoroughly.

AFTER TREATMENT.

Although when the plants are set and started to grow the grower feels a little relief, yet they still need care. The same care is needed as to watering and the same ample supplies of air are necessary. The water should be given around the plants only, not all over the bench, for the longer the soil can be kept on the dry side between the plants the better rooting system they will have. Plants always saturated with moisture may do well, apparently, during the summer and be a riot of green leaves and shoots but when the cool nights of September come around then such plants will be soft and will fall a prey to black spot. And while on this topic it may be well to warn growers against too frequent spraying. It is very tempting on a hot day when the rose plants seem to be asking for water to give them a good washing with the hose. And it is necessary occasionally. But the leaf of the rose is naturally protected from fungus spores, and constant spraying washes away this protection, leaving the leaf exposed to this danger. This, the writer is well aware, is debatable ground and he does not wish to draw any hard and fast line, but there is no doubt at all that the majority of growers of American Beauty spray a good deal too much in summer, with the result that their plants are not in condition to withstand any slight check in fall or early winter.

There are very few weeks in the year when some ventilation at least is not necessary, while during the spring and fall the houses should never be entirely closed except for violent storms. The air should always be kept moving, never stagnating, and then all will be well. During hot weather, of course, it is impossible to ventilate too freely and as long as the night temperature is around 60° all will be well along this line. Thus the summer season may be described as preparatory for the winter's work of the plants. They gather strength and stamina to sustain them during the dark days and only such plants as are well looked after and assisted to form a good root system by this careful watering can be expected to give a good account of themselves in winter. Regarding what growers term setting the buds this consists of running the plants a little drier and cooler for a week or two in advance of the time when flowers are needed. Only experience and observation of the effect of this treatment will make the grower sure of his ground but it is quite safe to let the plants go with half the usual quantity of water for a couple of weeks and drop the temperature to 55° for the same period, this having the effect of forming buds. But it is one of the details which beginners will be well advised to leave alone until they feel they have command of their plants and to experiment with carefully at first.

COMMERCIAL

May Flowering Tulips in England.

We have had a glorious week for prolonging the cut flower trade, cold at night and very dry. I am only naming two varieties which we are growing in acres both for bulbs, as also for the cut flower trade, which we do from the extreme west of England to north of Scotland. These are Golden Beauty or Boutoun d'Or (Lutea), the brightest yellow in cultivation. Among other good qualities is the long lasting in the bed. Picotee (Maiden's Blush) is white, with graceful recurved petals, margined rose. A very effective variety for all purposes, trade and private. From early morning in the bud until the sun opens them they present a very noble appearance. Men cut the blooms and women pack them, over 20 of the latter being so employed.

S.

ORCHID NOTES.

REPOT Cattleya gigas directly after flowering if the plants need this attention, as a flush of new roots usually occurs at this time.

Phalaenopsis.

MOTH ORCHIDS INCREASING IN FAVOR.

Recent importations in large quantities of the beautiful moth orchids, (phalænopsis) have served to bring this genus more into the limelight. As with so many other splendid orchids the simple life of the average commercial greenhouse and the haphazard methods of cultivation followed do not suit these aristocrats of the orchid community. Yet their culture is not difficult and if growers would only get out of the habit of treating everything alike and study the likes and dislikes of their plants a little all would be well. If Engish growers can get such splendid results as they do under the murky skies and in the fog laden atmosphere of the great cities, surely it is not too much to expect that with our clear air and brilliant sunlight we can at least do as well. It is simply a matter of attention and knowledge of the peculiarities of the plants.

Phalænopsis is a fairly extensive genus, but two or three species stand out head and shoulders above all the rest as beautiful and showy yet refined flowers. P. amabilis, P. Schilleriana and P. Stuartiana are three of the very best and a grower who possesses a good stock of these three kinds and their varieties may consider himself well equipped for entering the cut flower end of the business as far as moth orchids are concerned. We may say here, however, that we speak of P. amabilis as including such kinds as P. Aphrodite, P. grandiflora, P. Sanderiana and a few others that seem hardly entitled to specific rank though very beautiful varieties. In the culture of phalænopsis growers must constantly keep in mind their truly epiphytal nature. The roots must be clinging closely to something firm and substantial and there is nothing so good or so natural as wood. Were it possible to keep the atmosphere of the greenhouses constantly moist and charged with ammonia or some other indefinable element that is always present in a proper growing atmosphere and in the native habitat of these plants, then we would unhesitatingly say grow these orchids on bare blocks of wood, water them at the roots several times daily, keep up a high temperature, shade from bright sun only and all will be well. The nearer the grower gets to these conditions and the less he hampers the progress of the roots with moss, peat and other compost the greater his success will be.

Coming to detail, the most suitable receptacle for phalænopsis to date are the cylinder-shaped wood baskets. They have been in use for a number of years and are still the best. Unlike the root of a dendrobium or other orchid that likes to twine around small bits of charcoal and grow close together, those of a phalænopsis seem to delight in running in straight lines up or down a block of wood and the long rods of the cylinders allow of this. We are not saying that the plants will not do well in the ordinary basket, but have noted this peculiarity for many years and give this thought for what it is worth. The growing season for phalænopsis begins in early spring and finishes in autumn, but there should be no unusual excitement at the former or sudden drying off at the latter. The seasons should merge into each other as it were, for violent changes cause checks that are followed by the loss of leaves in winter and this means loss of strength to the plants. This leaf dropping, as it is termed, is the worst trouble to the grower of phalænopsis and, though any grower can induce the plants to put on good growth in summer, unless this is properly consolidated by a sufficient quantity of air, the forced leaves get loose at the axils and, at the turn of the year when growth is again getting active, fall off. But it is folly to think these plants cannot be grown. They are not even difficult to grow if the grower will consider their habits. All they want is reasonable care and attention to the requisite details. Then they need no more skill than carnations, roses or any other crop.

COMMERCIAL.

Miltonia Vexillaria.

A SHOWY AND BEAUTIFUL ORCHID.

Cattleyas have been, and still are, the most sought for, indeed one might say the only thing in orchids for the American cut flower trade. These and the Brazilian lælias, their compeers, have been well exploited and probably they will always be the most popular, for they are showy yet refined in coloring, large and may be produced practically the year around since the reintroduction of the old C. labiata. But there are signs that the up-to-date grower will have to look out for a variety in his stock of these plants as well as in other lines and it will be necessary for him to look out for other showy and fine flowering species that can be grown at a profit. We do not want small flowering species and botanical curiosities. There is no room for such truck in the business of the grower of orchids for cut flowers, beautiful and interesting though they may be to collectors and orchid fanciers. The man who is in the business for dollars and dimes must seek something that will bring them. The subject of the accompanying illustration is no novelty.

MILTONIA VEXILLARIA.

It has been before the public for many years, but it has, as far as the writer is aware, never been tried out as a commercial cut flower in America. Yet it is one of the most beautiful orchids in existence, as fine in flowering as the cattleyas, as easily grown by a grower who knows his business and a superb species in every way. It flowers but once in a season, it is true, and for this reason the flowers would not be available all the year around. Still by a little manipulation they can be cut for at least three months on end if a sufficient quantity of plants is grown, and this is as much as can be said of any species of cattleya. The color ranges from the deepest rose pink to nearly pure white, and the flowers last well in good condition if allowed to finish properly on the plants before being cut.

The culture of Miltonia vexillaria, as mentioned above, is not difficult. But the plants will not look after themselves in the way cattleyas do. Cattleyas grow and flower freely—for a time—with the most rudimentary kind of culture; they have few insect enemies and, unless the roots are rotted out with over supplies of water, they go on and flower annually for a number of years. Now with this miltonia the grower has to obtain clean plants and keep eternally after them to keep them clean, also to provide them with a good rooting medium and water carefully if they are to keep in health and flower freely any length of time. We do not wish to scare growers by a formidable list of what has to be done, for all these things are easy, but simply to point out the absolute necessity of keeping the plants right. Any grower who is not prepared to do this had better leave this orchid severely alone or he will be money out and in a surprisingly short time.

M. vexillaria is also known as Odontoglossum vexillarium, but odontoglossum is a name to scare those growers who have tried and failed to keep O. crispum and such like kinds cool enough to retain life in them, so we will stick to the better known and more suitable term. The species is rather a restless one. It grows more or less all the year around, consequently should never be severely dried. During the summer months it is impossible to keep the plants too cool. Shade the house or houses, dampen the floors and benches regularly and water and feed in accordance with the weather and the state of growth on the individual plants. In winter maintain a minimum temperature of 50° at night and reduce the atmospheric moisture. If this was all the growers' task would be easy, but thrips often upset the nicest calculations and this active little insect has been the ruin of more plants of this beautiful orchid than any other thing. If allowed it eats into the hearts of the young growth and simply paralyses it, makes white paths all over the pretty pink flowers and black unsightly patches in the growth. There is just one way and that is to prevent the insects from getting a hold by frequent fumigation and by dipping the plants regularly in a nicotine solution and spraying them afterwards. We have not gone fully into the details of culture, as outside these leading points they are much the same as for other orchids. But we would like to see such a beautiful species well and largely grown in this country. COMMERCIAL.

CHRYSANTHEMUMS

Benching.

For early blooms there is no time to be lost before planting. Such kinds as Glory of Pacific and its sport Polly Rose (Estelle), Ivory, both white and pink (the latter properly speaking is Agnes L. Dalskov), are all of dwarf growth. To produce fair length stems before the early buds appear they should be planted not later than June 10 and if they have been in the soil 10 days or more so much the better. To secure early flowers it is important to save the early buds. Those to be cut early in October should be disbudded from July 20 to August 10. From this it will be seen there is approximately only 60 days for the plants to make growth and set buds. Some varieties are fairly rampant, pushing their stems upward very rapidly, and soon fill the soil with roots. Of such Robert Halliday and October Frost

Chrysanthemum Virginia Poehlmann.
Grown by Komitsch & Junge, Secaucus, N. J.

are examples and will produce sufficient stem from now on.

Golden Glow seems to be in a class by itself. When planted in May it will produce good blooms soon after September 15 from early July buds or may be planted at intervals for succession and thus extend the flowering period to the end of October. We recommend this method to those who require a constant supply of yellow from the end of September to the advent of Col. D. Appleton, which is generally ready by October 30. When this system is adapted a continuous cut is assured by taking the first bud that appears, as the later plantings will not set bud until the bench is well filled with roots.

Cuttings of the midseason sorts should be put into the sand immediately so they will be ready about June 20. It is unnecessary to shift from 2-inch to larger pots; this labor can better be diverted to filling the benches. We would not advocate planting poorly rooted cuttings directly on the benches, but the strong growing sorts, if well rooted and the soil is friable, may be thus treated with good results if proper attention is given to watering and shading until they are established. They may be shaded by papers or by inverting a 4-inch pot over each plant; in either case the shading should be removed at night. The percentage of loss will be much less than the cost of establishing them in pots.

Whatever the condition of the stock, large or small, leave a depression around each plant to receive the water. It is best to confine the supply of water to the depression until the plants show signs of making rapid growth. Planting late does not bring about the desired results; some customers insist on having early varieties in their July shipments. It is true they will flower, but they cannot mature as early as those benched in May or produce as high grade of blooms. When we consider the disbudding should take place in July and August the fallacy of planting such kinds in July is apparent.

ELMER D. SMITH

To Be Done Now.

IN THE GREENHOUSES.

Pot Begonia semperflorens singly in 2½-inch pots and give them a stand at a good distance apart in a light house or frame.

Shade the late sweet peas and keep the moisture and feed going at the roots.

A lath house or a structure covered with linen or other thin shading material will form better growing quarters than the ordinary greenhouse from now on for araucarias.

Select enough stock of geraniums and other bedding plants for stock purposes and keep them back. It is folly to sell out clean and have to purchase later.

Pot on young smilax and asparagus and keep them moving. Pinch the smilax before it runs over the sides of the pots and gets tangled up with other plants.

Begin watering calanthes as soon as the roots commence to run in the new soil and increase the supply, as they take hold and grow freely.

Coxcombs should be kept in small pots until the color of the combs can be seen. Potted earlier the plants will be tall and ungainly before the combs appear.

Spread out the young Boston ferns and grow them on in a slightly shaded house with a moist atmosphere, but avoid spraying the plants overhead.

Plants of Begonia Gloire de Lorraine, Agatha and others of this section shipped in from a distance should be given a rather close and shady position until again established in the pots.

There is still time to root cuttings of geraniums for winter flowering, but no more time should be lost. The plants will have to be grown in pots right along and given good culture.

OUTDOORS

Watering is not necessary yet. Cold water slopped over young growing plants at the first sight of the sun is a great check to growth when it will do most harm.

If there are any more asters, stocks or other annuals to plant out, get them out without any more delay.

Thin the rows of beet and use any of the thinnings that may be necessary to make good in the ranks. Before planting them pinch off the end of the root.

Spray early, both to prevent fungus attacks by coating the foliage and also to check incipient attacks and insects.

Sow portulaca sowewhat thickly on any hot dry bank or similar place where it is difficult to get other plants to thrive.

Kochia scoparia may be planted now as a finish to shrubs, borders, or as

single specimens in small beds on lawns. The summer cypress, as this kochia is called, has a fine appearance all summer and turns to a beautiful color in autumn.

Kohlrabi may be sown now on good clean soil. When the soil is poor the growth is slow and the roots tough and stringy. Half grown roots are very good when properly cooked.

Keep after the young tomato plants. If they are to be grown to single stems pinch out every lateral on sight and keep the roots on the dry side until the first bunches of fruit are set.

Impatiens aurea, the native jewel weed, is fine for growing in damp positions in the wild garden, thriving either in sun or shade if the bottom is moist.

The Preservation of Cut Flowers.

SUGAR SOLUTIONS.

Sugar (saccharose) is the most highly recommended preservative. While certain flowers (lilacs, pelargoniums, lilies, sweet peas, nemophila, cephalaria, etc.) do not keep so well in sweetened solutions as in pure water, and while others (marguerites, Chrysanthemum lacustre, tulips, etc.) keep no better in such solution, a large number of varieties have their lasting qualities notably increased, sometimes even tripled. The great difficulty is to ascertain the strength of the solution required, which varies from two to 20 per cent, according to the species and even varying among the varieties of a species. Of all the flowers experimented upon, the linaria of Morocco appeared the most sensitive, being benefited by even a two per cent solution and most helped by one of 15 per cent or even higher. Pentstemon Hartwegi gave the same results. With Lychnis Chalcedonica, the keeping quality is prolonged by a 2 per cent solution, also by one of 10 per cent, but 5 per cent seems to be the most effectual. Experiments with 15 varieties of pinks have shown a 10 per cent solution to be the lowest limit and one of 15 per cent the most desirable. Experiments on roses have extended over 45 varieties and have shown the best results with solutions of between 7 and 10 per cent. Some sorts have even kept better with a 5 per cent solution, but this is too weak for most kinds, which show even poorer results than in clear water.

With the 35 varieties of chrysanthemums, the preference seems to lie between a 15 per cent and a 17 per cent solution; with orchids, between 10 and 20 per cent; with the solidagos, in the neighborhood of 14 per cent. Experiments have been less numerous with divers other flowers which benefit equally by the sugar solution. Trifolium rubens, Datisca cannabina, Achillea millefolium, Hibiscus Syriacus, Œnothera macrocarpa, Montbretia crocosmæflora, which keep better in a 10 per cent sweetened solution than in pure water. In the cases cited above, the sweetened solution has been used as the conserving medium. In another series of experiments, the flower stalk was allowed to stand for about an hour and a half in a concentrated solution of sugar, and afterwards placed in pure water and a 50 per cent solution was required to attain better results than the ordinary method. Pinks, roses, peonies, marigolds, Cerastium tomentosum, Deutzia crenata, Lychnis Chalcedonica flos-cuculi, Orchis mascula, maculata and Morio and the trifoliums, benefit more or less by this mode of treatment, while other flowers, such as violets, syringas, digitalis, aquilegias, aconite, Heuchera sanguinea, etc., do no better than in pure water. Generally speaking, this mode of treatment, though more economical, is less efficacious than that of keeping the flowers in the sweetened solution.

In case the keeping quality of the flower is not increased, this treatment is sometimes of advantage to flowers which deteriorate quickly in clear water. Iberis pinnata, for instance, becomes too long in pure water; in the sugar solution it remains shorter and the flowers of better color. Cerastium tomentosum, on the contrary, if tied in bunches and placed in the sugar solution becomes longer and more elegant and lasts about one-third longer. Also roses, pinks and peonies, cut in bud, are found to open sooner than in pure water, as is also the case when the stems are kept constantly in the sweet solution. In this latter case the size of the flower may be greatly increased; it is more than doubled in Linaria maroccana, whose inflorescence is far longer than in pure water, although the color is less intense. In the 10 per cent solution of sugar the lythrum, the red trefoil and the pink achillea open their flowers much sooner and better than in pure water.

SALINE SOLUTIONS.

Experiments were also made with nitrate, chloride and sulphate of potassium and nitrate and chloride of sodium. In general, when flowers lasted longer in comparison with the use of clear water, the results were still inferior to those of the sugar experiments. We saw that the use of sugar hastened the development of roses; chloride of sodium had the same effect; chloride of potassium on the contrary, delayed the development. One hour in a 10 per cent solution of chloride of sodium had unfavorable results or none at all in many plants, such as iberis, saxifraga, aquilegia, snapdragon, pentstemon, iris, gilia, etc. It lengthened the duration of pansies, marigolds, scabiosa, etc. Roses and peonies opened more quickly; Scilla Peruviana and Ornithogalum umbellatum developed much better than in water. The same strength of nitrate of potassium hastens the unfolding of peonies and certain roses, the growth of Mimulus luteus and lengthens the marigold's life a little. It has no effect upon pansies, digitalis, marguerites, Iris Germanica, pinks, Eschscholtzia Californica or potentilla. The 10 per cent solution of bipotassic phosphate is without effect upon roses and carnations, eschscholtzia and anthemis; it is useful to mimulus and orchids, especially Orchis mascula.

This same dose of 10 per cent of chloride of sodium (salt) is superior to bipotassic phosphate for Scabiosa arvensis, Lychnis Chalcedonica, and even to the 50 per cent sugar for bleeding hearts and ornithogalum, while in general the sugar has a better effect than any of the salts tried, even on the orchids. Salt, however, gave interesting results with lilies and pelargoniums, which are not affected by sugar, and it also hastens the unfolding of nymphæas and roses. The bipotassic phosphate seems to us at present to be the best preserving medium for orchids; the period of Orchis laxifolia is doubled in a solution of one-ten-thousandth.

VARIOUS SOLUTIONS.

The combination of sugar and phosphates gave good results in the keeping of chrysanthemums and orchids. Chrysanthemums did particularly well in a solution of 15 per cent sugar and .0001 phosphate. Chloral added to the 10 per cent sugar solution in proportion of from .001 to .0001 produced an excellent effect on orchids and linaria. On this latter flower the best proportion of sugar alone is about 15 per cent, but the addition of chloral to this amount is harmful. On Lychnis Chalcedonica the chloral seems to counteract the sugar. Alcohol added in the proportion of 10 per cent acts remarkably well on certain flowers such as primulas and the composites; however, if the flower develops slowly and lasts a long time the part of the stem submerged in the solution is soon withered and made useless.

Glycerine is useful in the proportion of one per cent for daisies and forget-me-nots; two per cent for lychnis; four per cent for linaria. A short immersion in a 50 per cent solution with glycerine gave less good effect than a similar use of sugar. The action of various salts now recommended as stimulants to plant growth has been studied. Chloride of cæsium acts well on marigolds; sulphate of manganese on columbines was better than chloride of cæsium; fluoride of potassium about the same. Finally, sulphate of manganese .0001, added to a 12 per cent sugar solution, gave good results on lilacs, which responded to neither of these reagents alone; the blooms enlarged, the color shaded more pink and kept a remarkable freshness. Among the violent poisons, suiphide of mercury prolongs the life of iris, anthemis and dicentra; black oxide of copper and arsenate of lead have the same effect on marigolds. These experiments have given results that are sometimes exact, sometimes uncertain, but have shown definitely that no one preserving medium can be advised for various sorts of flowers, nor can the strength of a solution be ascertained that will apply generally. It is only ascertained that the use of sugar and some other substances, especially salt, bipotassic phosphate, chloral and sulphate of manganese, in proper proportions, prolong the life of flowers to an extent that will pay for the expense; also that the effect on color and in hastening or retarding the unfolding of the bud is not without practical interest.—Revue Horticole.

OBITUARY.

Joseph Mason.

Joseph Mason, who for years published Mason's Monthly in the interests of horticulture, died at Vineland, N. J., May 24. He was born in Essex, England, 79 years ago. He went to Vineland 37 years ago and has been one of its leading citizens, being mayor for two terms. He was an indefatigable worker in the interests of horticulture and floriculture and did pioneer service in beautifying Vineland.

Julius Friedlander.

Julius Friedlander, an old time florist of New York, whose store was in Times square 30 years before this name was applied to it, died May 25 at the home of Walter Gantz, 124 West Fifth street, Bayonne, N. J., of cancer of the stomach. He was 56 years old and leaves a widow, two married sons, three brothers, and a sister. The latter is Lottie Abeles, wife of Edward Abeles, the star in "Brewster's Millions," and herself a member of the company. Mr. Friedlander's mother is still living at the age of 86, in Norwalk, Conn. Mr. Friendlander's father, the late Ludwig Friedlander, opened a florist's shop at Broadway and Forty-eighth street in 1868, and it was never closed until illness forced the son to give up the business in the fall of 1908. Mr. Friedlander was little more than a boy when his father's business was established. There was then a small structure with a fence around it on the site of the Times building. There were many fine private estates in the vicinity. The owners of these places, long ago displaced by business blocks, were liberal patrons of the Friedlander flower store.

SOUTH HADLEY, MASS.—Joseph A. Beech has sold his house to Joseph Champagne.

THE Illinois legislature, both house and senate, have confirmed the appropriation for the florists' experimental work at the Illinois University, $15,000 for the coming two years. Friends of the work wanted $35,000.

THE seventeenth national irrigation congress meets in Spokane, Wash., August 9-15 next, for the consideration of and action on irrigation, drainage, forestry, deep waterways, good roads and home building. The motto of this association as printed on its literature reads: "Save the forests, store the floods, reclaim the deserts, make homes on the land." This shows the importance of the congress.

SEVERE hailstorms are reported from various points in Pennsylvania, but florists apparently escaped much damage. Much fruit was injured.

WE would remind our readers that good clear photographs of brides' bouquets, table or church wedding decorations or other good work of any description are always welcome.

ALTHOUGH reports are by no means complete Memorial day business seems to have been very satisfactory along all the principal lines. Plenty of good stock was on hand in most cases, carnations being the shortest item.

BRITISH growers of sweet peas are holding out the hand of friendship to growers in this country and much good should result in the matter of clearing up the synonomy and other matters relating to this important flower if specialists in the two countries combine in their efforts along this line.

EXPERIMENTS by the Department of Agriculture tend to show that there is little difference in the effect, as a spray, of Bordeaux mixture, factory-boiled lime-sulphur solution and self-boiled mixture, the little difference there is being in the rotation above given, the Bordeaux being the most effective.

THE twenty-sixth annual report of the board of park commissioners of Minneapolis, Minn., is a finely got up book of 96 pages the cover having a pretty scene in Mississippi park printed in colors. There is an excellent portrait of the Hon. Jesse E. Northrup, president of the board and many other illustrations showing pretty spots in the various parks, new buildings and other interesting things as well as a full report of the work done and in hand by the president and by Superintendent Wirth.

THE premium list of the sixth annual exhibition of the American Peony Society, to be held June 8-9 at the Cottage Gardens, Queens, N. Y., is to hand. In the commercial classes there are 27 prizes ranging from $15 to $5 for collections and individual varieties, while in the amateur classes there are 14, ranging from $5 to $2. Entries must reach Manager R. T. Brown, Cottage Gardens, at least two days before the exhibition opens and all express charges on exhibits sent must be prepaid. Consignments must be sent addressed Cottage Gardens Co., Queens, Long Island, N. Y.

The Way the Wind Blows.

Mark Twain says the wind blows from the north, or the south, or the east, or the west, or some point approximating in those general directions.

In a contemporary a gentleman gives a testimonial, and the writer of the introduction says, in part: "A man whom no inducement would influence to write such a testimonial unless every statement was unqualifiedly true." Perhaps the writer meant well, but the words have a strange ring. Florists as I have found them are a straightforward class of men, and as a whole are head and shoulders over the average business man or tradesman. In all my dealings with the florists of this country I have yet to find one case of graft or dishonest dealings. Honor and square deals are what have been handed out to me and others I have known. It looks from this distance that every man who writes a testimonial would have to go before a justice of the peace and take a solemn oath that what he had written was true, and it places anyone who has written a testimonial under suspicion of having had some inducement passed along to give his opinion or views. Cut out all this nonsense.

I see my friend Badgley gave an interesting lecture on roses. The rose men must be getting educated these days. The old saying, "Old men for council and young men for war," seems to have passed, as our young men growing up in the business seem to have a firm hold on all things pertaining to their calling in the various lines of horticulture, but I cannot understand what friend Badgley means when he says: "As selling cut flowers through a commission house or otherwise should be watched as closely as the fires in the boilers." I think it would be a good thing for the various clubs where lectures are given to have an official report of the proceedings, questions put to the speaker and answers, as there are points brought out only those that are at the meetings know anything about.

The elements these days and carelessness are certainly working great havoc amongst greenhouse men. It seems a pity that in a few minutes the florist can lose everything he has. Perhaps the savings and hard work of a lifetime are swept away, and often the owner is at an age when the stamina for hard work isn't so ready as was the case years ago. I know of no trade or profession where there is more risk, worry and brain power needed than there is in ours. Let us hope that the events just passed and the losses entailed by our brothers in the west and Canada never again may be repeated. RAFFIA STRINGS.

Florists' Hail Association.

The following losses have been adjusted by the secretary of the Florists' Hail Association since May 5, 1909:

Forcing Bulbous Stock in the South.

A paper read before the New Orleans Horticultural Society by Richard Eichling.

The methods of forcing and growing of the various bulbs hereafter mentioned are only adaptable at a latitude of from 31°-29°. The storing of the bulbs after their arrival is very important. The most suitable place is a well ventilated dry room provided with sufficient shelves alongside the walls. In case of severe cold weather, a safeguard against freezing must be provided for. In placing the bulbs on the shelves, make not more than five layers to prevent them from getting heated and keep a watchful eye on the stock during winter and especially towards spring to discard all the softened and spoiled ones.

Roman hyacinths and Narcissus Paper White, Trumpet Major and Von Sion can either be planted in the regulation bulb boxes for early forcing or in the cold frame in parallel rows half an inch apart from side to side and one inch apart from top to bottom with a covering of an inch and a half of soil. Cover the frame with boards in such a manner that the rain may run off. After the growths are about four inches above the soil, remove the boards and replace with well fitting clear sash. Ventilate according to the temperature; a board covering during frost is sufficient.

HYACINTHS AND NARCISSI.

Miniature Dutch hyacinths and Narcissus Trumpet Major and Von Sion grown in a cold frame will yield very satisfactory results, saving time and money. Hyacinth and narcissus bulbs planted in boxes should be placed in a shaded spot, free to the north winds; covered with charcoal, dust or light soil about four inches thick. As soon as the growths appear above the surface, bring the boxes inside and force them according to needs. If overstocked, bring the flowering boxes in an airy, cold and well shaded place and water sparingly between the rows; the cold frame stock in such a case shade with trellis shutters. From the time the bulbs are planted, either in boxes or in the cold frame, never allow them to get dry.

Freesia refracta alba and candidissima, the last named a new pure white variety, should not be planted before the middle of September in boxes, the cold frame or in the open ground. With the cold frame process, I obtained the best results, saving time, had fine, long stemmed flowers in season and found that the bulbs had greatly increased in number. Freesias planted in boxes should have a watering of liquid manure once a week after the buds are formed until in bloom.

CALLAS.

Callas can be profitably grown in pots, raised benches or solid beds. If grown in pots, one and one-half to 2-inch sizes are good enough, but for the cut flower trade two to two and a half inches are better. For the former use a 6-inch pot and for the latter a seven or 8-inch as the size of bulb demands. Crock the pots well, use a medium rich soil and plant so deeply that only the tip of the bulb protrudes above the rim of the pot. Put the potted bulbs in a cool house under the bench and water well. Keep them somewhat dry until partly rooted and the growths are from six to eight inches long, then place the plants on the bench about eight inches apart from pot to pot both ways. Give them a layer of old cow manure, a free supply of water and during sunny weather a frequent syringing. Renew the manure layers occasionally and as soon as the plants have about four to five well developed leaves water once a week with liquid cow manure. Never allow more than four to five leaves on the plant, as each additional one takes part of the strength from the plants as well as from the flowers.

Callas grown on the bench or in the solid bed should be provided with a good drainage, the soil made somewhat richer than for potting purposes. With the watering be more careful, the moisture will remain longer and the danger of the plants to rot off is greater. When in full growth, feed in the same way as is done in pot culture; likewise cut off all unnecessary leaves. Plant the bulbs neck deep and from eight to ten inches apart. Use a well ventilated house and give a night temperature from 55°-60°. It is best to plant fresh bulbs every season; carried over stock will not even justify the labor of potting or planting.

EASTER LILIES.

Lilium Harrisii and L. longiflorum giganteum are real money makers when successfully grown and brought in the market at the proper season, especially at Easter. Success depends a great deal on the condition of the bulbs and the proper house after the plants are about one foot high. As soon as the stock arrives, it should be planted and placed either in a cool house under the bench or in a deep cold frame and in the latter instance covered with boards. Crock the pots well, use a little old cow manure on the bottom, which will help the young growing plants considerably, and have the bulbs covered with one and a half inch of soil, which allows the top roots to get a good hold and adds to the feeding of the plants and buds later on. Any good half rich loam will do for potting. After the growth is about three inches long, take the plants from under the bench or cold frame and place in a cool, half-shaded house or frame for about 10 days to get the plants accustomed to the light and to stiffen up. After that, grow them on in the open cold frame until it is time to bring them inside for forcing and expose those growing in the house to the full sun.

Water carefully pot by pot only what is getting dry after the bulbs are planted, but never let them get dry after the plants have once a good rootball and on sunny days syringe the growing stock well. Plants about two feet high can easily be brought in the forcing house under a night temperature up to 75°, but keep the plants always well syringed. Give a manure watering once a week until the buds begin to show color. It is advisable to harden off all plants partly in bloom, and not used immediately; in a cool, shaded house the flowers open slower and will last longer. If there is no facility for cold storage, make arrangements with your shipper to send the bulbs on at your own convenience, because lily bulbs, even if taken out of the boxes, will not keep as well as hyacinths or narcissus in our southern climate.

JAPANESE V. BERMUDA BULBS.

On account of the scarcity of pure undiseased Bermuda stock, the Japanese Lilium longiflorum giganteum has to a great extent taken its place. These bulbs, free from any disease, grown in the same manner as the Bermudas, and kept during winter in cold storage, can be planted in a cold frame as late as the middle of April, giving a fine crop from the end of May until July.

Of the spring and summer flowering Japanese varieties, I have found L. lancifolium album, roseum, rubrum and auratum the easiest to grow, ready sellers as pot plants and very useful as fancy cut flowers. Plant fresh stock during the winter months; a late planting may not give the expected results. I would not recommend the planting of cold storage bulbs of any variety during summer, because they bring only from one to three flowers and a great many lose their flowering germ entirely. Northern cold storage stock of Lilium giganteum for early winter is all right.

VARIOUS BULBS.

Iris Hispanica cannot be highly enough recommended as a prolific bloomer. Plant the bulbs at the middle of October in the open ground, in medium rich soil, one inch and a half apart in the rows and about five inches from row to row and cover them a little over an inch with soil. Give a good watering after planting, keep the bulbs partly dry in the beginning, but, as soon as the growths start, do not allow them to get dry. The flowering season lasts from the middle of March until the middle of April, which

often happens to be Easter time, when such flowers are most in demand.

Tuberoses, single, are the only ones to plant successfully and profitably in the south. The bulbs should be planted in rows during the month of March, either singly or in clumps, according to the stock and space on hand, in a rich soil with a facility to drain off during heavy rains. After the plants are growing, water well during dry spells and especially when they are in bloom. The flowering season lasts from July until sometimes the end of November, providing we have not too wet a spring or summer which proves always disastrous for tuberoses. The flowers of this species open freely and the spikes are more graceful than those of the double variety. Let the plants dry off when the season is over, dig them up and store them away in a cool, dry place until the shipping and planting season begins. Ranunculuses, anemones, double and single, tulips, double and single, Scilla Sibirica, crocus, Lilium candidum, etc., are not profitable to grow below a latitude of 32° because these bulbs require a more severe winter to get well rooted in order to produce good saleable flowers.

Drop Fertilizer Merger.

J. P. Morgan & Co., it was learned recently, have given up financing the proposed merger of independent fertilizer concerns, which has been in process of formation for several months. Morgan & Co. were to have taken a block of the new company's capital stock and to have supplied the combination with a large amount of cash.

It has been reported from time to time that certain companies which it was desired to include in the combination were not assenting to the plan, and these reports seem to some extent to be borne out by the fact that the financing of the merger was dropped by Morgan & Co. for the reason that the organizers were not able to fulfill certain conditions laid down by the bankers. It is not understood that any reopening of the negotiations with Morgan & Co. is contemplated.—Press Clipping.

President Taft Caught Stealing Flowers.

WASHINGTON, D. C., May 24.—President Taft and his aid, Capt. Archie Butt, were for a few moments in danger of taking a trip to the calaboose. An irate keeper of "Uncle Jimmie" Wilson's flower beds on the grounds of the Department of Agriculture caught them picking the flowers.

When the guardian of the grounds appeared he did not recognize the president and began to call him. The president cleverly turned the hue and cry against Capt. Butt and joined the watchman in giving him a lecture. When the watchman discovered who the large man was he stopped his talk. The president confessed the incident to the secretary of agriculture today and commended the latter's watchman service.—Chicago Tribune.

NEW CASTLE, IND.—Herbert Heller is in a very serious condition and his relatives are greatly worried.

TRADE GOOD.

Business is good and has been right along. Stock seems to have been more plentiful than in past seasons and, generally speaking, of much better quality. The lead has been the carnation, the price of which has remained firm for good, fresh stock, although some inferior stock found a sale at reduced prices. Roses have come to this market in good supply and splendid quality. None are grown here worth speaking of, under glass, but our outdoor roses are always fine and this season has been so cool and backward that they have come along slowly, but with strong, clean growth, so that within another month there will be plenty of fine flowers in this immediate locality. At present carnations are rather scarce and with no other prospect for several months to come. The growers all plant tomatoes and take out the carnations every year, which causes a scarcity all summer and generally up to December. This season we find most places are going to grow the plants under glass all season and some have thriving looking stock in the benches now. Those who plant in the field have already finished and the stock is starting very well, when we consider it is rather a dry season. At every place we found bedding stock practically sold out, although we found H. W. Manike with some good stock on hand yet which may be considered good property, although he is anxious to turn it into the cash at every opportunity—he needs the room.

NOTES.

We have not seen any chrysanthemums planted yet, but at the Northwestern Floral Co.'s we found something worth mentioning in the way of a new sport of Mrs. Jerome Jones which is practically a constant bloomer with a fuller and better flower than its parent, of a pure white, crown tipped with a purplish tint in a beautifully delicate way. We saw a plant of it with half a dozen good 5-inch flowers on it that has been in bloom practically all the time for several months. It shows a good bud on every new shoot coming and every crown bud will bring a good bloom if left on. The habit is good, robust and strong with excellent stem and foliage that clothes it nicely well up to the flower. We call the attention of the specialists to it and hope it may get the place it deserves. As a regular fall bloomer it is fully up to the parent and probably easier to do.

It is said that on account of storage reservoirs being unfinished the city authorities are about to cut off the lawn sprinkling and it will prove a very serious thing for a great deal of newly planted stock as well as the new lawns just getting nicely started. We hope such a thing may be avoided, for this season the city should be at its best to show the beauties of the well kept residences in this city of homes.

A. A. Hinze is practically out of bedding plants of every kind and reports that he can hardly get enough carnations to supply the demand he has.

Much is going on in the way of landscape gardening and those who are engaged in that work are quite busy all the time.

Chicago.

A DECLINING MARKET.

The note of warning sounded in this column last week that there would be a general shortening up all along the line, due to the cold wet weather, and that prices would consequently soar was proved true by existing conditions last Friday and Saturday, as the Decoration day business this year was fully 20 per cent larger than any previous year in the memory of "the oldest inhabitant," and even then a great many orders, especially for carnations, were only partly filled. Owing to the fact that Decoration day fell on Sunday and that Monday was observed as the legal holiday conditions were somewhat different than in former years, as there were really two holidays for which to provide, but even then numbers of dealers did not seem to appreciate what effect this would have on the flower market and waited until the last moment to place their orders in the hope that prices would fall and consequently were caught with short supply and were forced to pay top prices even as late as Monday morning. Before noon, however, large shipments of carnations to one house broke the market and prices began to tumble and as a consequence the fancy blooms that had been selling for as high as six cents could be bought for two. This, of course, had its effect on the rose market and at the opening of business on Tuesday prices had dropped all along the line. Several of the growers cut an enormous crop of American Beauty, which is moving freely, but at low prices. One of the best features of this holiday which we note with a great deal of satisfaction was the almost entire absence of pickled stock. Whether this was due to the early demand or to the fact that growers generally are awakening to the fact that this antiquated method of doing business does not pay we do not know, but, whatever the cause, the result is very gratifying and will make for a more stable condition. Large growers nowadays, who are marketing their own product, are in direct telephonic communication with their greenhouses and keep their finger continually on the pulse of the market and are thus enabled to order in shipments as needed, thus preventing either a glut or a shortage. If this same method were followed by the commission men there would be neither the one nor the other and the flower business would then be conducted on the basis of supply and demand, with the result that everyone would be much better off. Cape jasmine cut very little figure on the market this year, and while the crop was only about one-half that of former years prices remained normal. Peonies were plentiful and of uniformly good quality, while sweet peas were in great profusion and never finer. There are still some few of the best eastern cold storage ferns to be seen and these are bringing top prices, while the ferns now coming in are the soft southern stock that is very hard to work up.

NOTES

Shipping orders came in so thick and fast May 28 that the bowlers in the Florists' Club had to stick close to business and were unable to go to the alleys last Friday night On June 4 play begins in earnest on the Bensinger drives when competition to decide on the team that will represent the club at the S. A. F. convention to be held at Cincinnati in August will be inaugurated. Every member of the Florists' Club and all who are identified with the flower business in Chicago who are interested in bowling should make it a point to attend these Friday night contests and either enter the competition or help root for their representatives.

The flowering trees and shrubs in the various parks are now at their best and those interested should not fail to make a tour of them. The herbaceous plantings in Garfield park are coming into line and the various species will be very interesting from now until the end of the season.

T. E. Waters of the A. L. Randall Co.'s supply department left on Tuesday on an extended business trip, to be gone about two months. Mrs. Waters left for the east on Wednesday, where she will spend the summer.

Henry Bassett, a brother of O. P. Bassett of the firm of Bassett & Washburn, died at his late residence, 772 Warren avenue, May 26, at the advanced age of 78 years Interment was on Friday, May 28, at Elmwood.

Hubert S. Morton, the Thirty-first street retailer, is going to sell out and go west. He anticipates leaving June 18.

The Bohannon Floral Co. has moved into its new quarters at 11 Monroe street.

Most of the wholesalers shut down at noon on Decoration day.

Now for the June weddings.

Visitors: R. R. Davis of R. R. Davis & Co., Morrison; W. W. Platter, Carbondale; Karl Hirsch of Hillsdale Floral Park, Hillsdale, Mich.; C. H. Woolsey and H. B. Sullivan, Rockford.

Cincinnati.

FLOWERS SCARCE

Trade the past week was very satisfactory. With a shortening of stock in some lines and growers holding back for Decoration day it took severe skirmishing at times to get flowers enough to fill orders. Several out-of-town orders had to be turned down owing to the fact that the wholesalers did not trust to ship the flowers on hand for fear of arriving at their destination in bad shape. Memorial day business was big. Not one of those interested in the business at this writing has had time to figure the volume of business done, but we can safely state that it was at least 25 per cent larger than last year. Everything was sold out. The carnation, of course, was the flower mostly in demand, with not half enough for orders. Next came peonies; immense quantities of these were shipped into the city and at closing time on Sunday it was a hard matter to locate a good bunch in any of the wholesale houses. Ernst Mack of Price Hill hit the market with about 780 Lilium longiflorum giganteum and they were eagerly snapped up. They were indeed a fine lot. Roses in most cases were poor and did not bring any price worth mentioning. The better grades, what few there were, brought $6 to $8 per 100, but these sales were few and far between. Sweet peas and daisies were good property and the same may be said of lily of the valley. Iris at present is fine and some very choice stock is to be had. In the green goods line smilax still remains scarce, while both Asparagus plumosus and A. Sprengeri are in ample supply. Kentucky fern is being shipped into the city in great quantities and seems to be in active demand.

NOTES.

Wm. Wittaker, who was operated on at Christ hospital about two weeks ago, had recovered so far that he was able to be taken to his home last Wednesday, but on Saturday took a decided turn for the worse and grave fears are felt as to the outcome. However, we hope he will be spared, as few men have more friends than good-natured Billy Wittaker.

Harry Balsley, the man who sells those nice red flower pots, was a caller this week minus a mustache, otherwise he is the same old Harry. He reports business as very satisfactory. The last seen of him he was arranging for space for a display of his wares at the coming convention.

Will Murphy states that applications for space are coming in nicely and from present indications when Horticulture Hall is opened for the visiting florists next August it will remind one of a miniature exposition. One firm took 500 feet the past week.

The J. M. McCullough Sons Co. and C. E. Critchell receive big shipments every day and at times one wonders where the fern leaves are used, but then this is a big country.

J. A. Peterson went to Chicago Monday night on a business trip.

S.

LOS ANGELES CALIF.—H. N. Gage has bought out The Fernery, of Long Beach, and will operate at that place under the name of Gage, Florist, doing a general retail business.

New York.

GOOD BUSINESS.

It is always pleasing to note a change for the better in the condition of the market. Considering the condition of stagnation that had prevailed for two weeks previous, the business of the past week was very satisfactory. One good reason was a heavy falling off in the receipts of stock. This, coupled with an increased demand, put the market, figuratively speaking, on its feet. Early in the week special American Beauty roses went up to $30 and $35 per 100 and held firm throughout at these figures. Special tea roses sold readily at $6 to $8 per 100, though they became rather slow toward the last of the week. Taken as a whole carnations were the best sellers in the market. The carnation that did not sell for three cents was indeed poor. Good average stock went readily at four and five cents, while the Ward novelties brought eight cents. Orchids, gardenias and lily of the valley were not such good sellers. In proportion to the demand these stocks were more plentiful than roses and carnations. The outdoor lily of the valley is now in the market in considerable quantities and much of it looks good. At any rate it is for the time being a novelty, and with its deep green foliage it catches the public eye.

DECORATION DAY BUSINESS.

Though officially Monday, May 31, was recognized as Memorial day, most of the business in flowers was done on the previous Saturday. For various reasons the retailers of this city do not expect heavy business from the observance of this holiday. Many treat it as a holiday, pure and simple, leaving the city or seeking enjoyment in the lighter forms of amusement. There are many, however, who enter into the true spirit of its observance. There was a good market on Saturday, but it was noticeable that the cheaper grades of stock were more in demand; this, so far as we have observed, is usually the case. The volume of business was fully up to expectations and probably in excess of some previous years. At the plant market on Saturday morning, geraniums and other bedding plants sold as fast as they were carried in from the wagons. Doubtless much of this stock eventually reached the cemeteries. Though considerable outdoor stock has been in the market throughout the week, good peonies are slow in coming in.

NOTES.

We have received from Secretary Geo. V. Nash, the programme for the summer exhibition of the Horticultural Society to be held in the Museum building, Bronx Park, June 5-6. Particular attention is called to the fact that the exhibit will remain open on Sunday. Bronx Park is a beautiful spot for rest and recreation in the open air and its many attractions are well worth a visit. It is hoped that the additional attraction of a flower show, open on Sunday, will cause many to spend a day among its fine horticultural and zoölogical features.

The Johnston Heating Co. has secured the heating contract for several large houses being erected by Thomas Young, Jr., at his Boundbrook, N. J., range.

One of the interesting figures of this vicinity, now connected with the growing end of the business, is Dr. Daniel E. Logue, of Geo. P. Bloomer & Sons, Bellmore, L. I. Dr. Logue, then a very young man, was surgeon of the Monitor at the time of its historic sea battle with the Merrimac in Hampton Roads, March 10, 1862. It is a matter of history that the noise of the battle, or the results, echoed around the world and turned wooden war ships into junk. Dr. Logue is now 77 years old and a fine old man. He practiced medicine in Brooklyn till nine years ago, then, seeking retirement from the strain of an exacting profession, he moved to Bellmore and adopted the noble art of horticulture.

Through the increased vigilance of the police a man was arrested in Central park on the morning of May 29 and taken into Magistrate Herman's court on suspicion of having stolen a rhododendron, found in his possession, from the Sage collection in the park. A year ago these plants, the cost of which it is said was $50,000, were presented to the city by Mrs. Russell Sage. They were planted along the East drive near the Ninetieth street entrance to the park. Nearly half of them have already been stolen.

The Florists' Club outing is already an assured success. Special tickets for gentlemen only are $3.50, babies free. A $10 special prize will be given for the baseball match between wholesalers and retailers. The souvenir book will have 50 pages and many photographs. Donations for prizes and advertising are far ahead of all records to date.

Frank Valentine, a young man who has had long experience in the florists' business, is now conducting a wholesale store at 158 East One Hundred Tenth street.

Chairman Bunyard, of the Florists' Club outing committee, says it's about the last chance for members to get their pictures in the outing souvenir.

John Berger, of Berger Bros., Philadelphia, Pa., visited the cut flower district May 27.

Providence, R. I.

Thursday, Friday and Saturday of Memorial week were days of rainy weather that were calculated to produce a short crop of plants and flowers. Sunday and Monday were perfect and almost made up for the shortage of stock. Carnations were the scarcest and wholesaled at $3 per 100, some best grade going from $4 to $6, the latter prices being too high for the thoughtful retailer. Roses started in fairly short supply, but gradually uncovered and showed enough and plenty. They wholesaled at $3 to $10, the latter price procuring fancy stock with whip stems. Killarney, Richmond, Chatenay, Bride and Bridesmaid came in with good buds and clean foliage. The short stem grades were in heaviest demand with the trade, being used principally for bouquet work. Gillyflower, sweet peas, deutzia, field narcissi, white lilac and candytuft were in abunddant supply at reasonable rates. Geraniums were in fair supply and cleaned out entirely at 15 to 20 cents each retail; in pans of five at $1 there was a fine call. Bouquets went at $1 generally. Business was good and slightly greater than 1908.

M. M.

Rochester, N. Y.

MAYOR HELPS FLORISTS

Mayor Hiram H. Edgerton is interested in the flower show which the Commercial Florists' Association will hold in this city three days in the first week of November. Mr. Edgerton is practical in his interest, and Chairman Charles H. Vick is in receipt of a cordial letter from the mayor, in which Convention hall is tendered and assurance given that the mayor will be glad to do everything in his power to make the exhibition a genuine success. The letter follows:

I desire to invite the Commercial Florists' Association of Rochester to hold its contemplated flower show in the Convention hall in this city, and will be glad to do everything in my power to assist in making this exhibition a genuine success.

It seems to me that the florists and nurserymen of this city have shown commendable enterprise in planning for a flower show of this character. Rochester is the center of this business, and its greenhouses are famous everywhere. Many of our private citizens have devoted much time and means to the cultivation of flowers, and will contribute to the success of the display.

Such an exhibition as you have in mind will certainly be a fine thing for all concerned, and will prove advantageous to those engaged in the business, and very attractive to our citizens generally. The love of flowers and plants is common to us all, and I am sure an attractive exhibition of them will prove very beneficial.

I therefore cordially invite you to hold such an exhibition in Convention hall, and will do all in my power to make it successful.

Mr. Vick said the offer of the mayor will be gratefully accepted. In many respects the flower show will be unique. There have been flower shows in other cities, but we are determined to have one which will emphasize anew the name which our city bears, the Flower city. This will be no flower show, according to the accepted idea. There will be no tables, no set displays. We are to have one immense landscape effect, designed by one of the best landscape artists in the city, and taking up the entire floor space of Convention hall.

A 12-foot waterfall from the rear of the stage to the floor below, with palms and flowers and greenery, will be a feature. A band of 40 pieces will be stationed by the side of the stage, on the auditorium floor. There will be no room for it on the stage. To obviate the bare effect of the galleries, a canopy will descend from the ceiling to within six feet of the gallery railings, and will be covered with smilax and flowers. There may be an occasional settee on the ground floor in keeping with the landscape idea, but for the rest the only seats will be those of the gallery. We expect to import palms and smilax from the south by the carload, but apart from them the entire show will be of Rochester production pure and simple."

WEST LEBANON, N. H.—S. P. Franch is building a new greenhouse.

FLUSHING, N. Y.—Frank Voisenat was indicted and fined $10 for an assault upon the cemetery keeper here May 18.

RICHMOND, VA.—W. H. Hammond shipped 1,000 blooms of peonies this season, mostly Queen Victoria, for late; Officinalis and Rosea Superba, pink, early; Officinalis Rubra fl. pl., red, early. He will again plant largely this season.

GOOD MEMORIAL DAY TRADE.

Memorial day business was quite up to expectations in the demand for flowers, out-of-town business being particularly good. Immense quantities of stock in all lines were shipped out on Friday and Saturday; the commission men all said they had more than they could satisfactorily do. Carnations were most in demand and there was not enough to go around; $4 and $5 was the price. Peonies were found in every order. Early in the week the cool weather made the dealers doubtful about these flowers, but the weather changed later, the buds opened nicely and the general stock was never finer than this season. Prices ranged $6 to $16 for Festiva Maxima. American Beauty roses sold well, there being a supply sufficient for all demands. Eastern stock is much better than the local, as is also Kaiserin; the imported flowers of this variety are so fine that many ask what they are. Sweet peas were plentiful and sold well. The outdoor stock is now in, some remarkable flowers being seen; the whites readily bring $1.50 per 100. Stocks, lupins and snapdragon were to be had in quantity and brought good prices. Easter lilies were a feature with some shippers and lily of the valley was never finer and had a good sale.

NOTES.

W. K. Harris, who does things in a large way, has worked up a trade in Crimson Rambler and Baby Rambler roses for the last two weeks in May. As soon as the Easter stock is out the houses are immediately filled with rambler roses which have been wintering in cold frames. These are generally to be found in place on Easter Saturday; the men when waiting for returning wagons in Easter week bring the roses from the frames so that the houses are not vacant for more than a day. Today there is nothing left, roses all gone, thousands being handled the past week when there was a good demand for them. Ferns now take up this space. The new Harris fern, a crinkled form of the Boston, will be a leader this fall; it is sure to be a winner, being much admired by such good judges as E. G. Hill and Julius Roehrs.

McKissick Bros. had an innovation in a quantity of purple lilac, eastern stock which arrived in fine shape. They report a very satisfactory business, handling large quantities of eastern and local American Beauty and Kaiserin roses.

The Leo Niessen Co. say its staff was worked to the limit, but handled the large stock satisfactorily. American Beauty roses, peonies and carnations were leaders, being handled by the thousands.

Edward Reid cleaned up almost to the last flower; eastern lilies, American Beauty roses and carnations were his leaders. He says the shipping is widening with each season.

Berger Bros. report business very satisfactory; quantities of peonies and outdoor shrubbery were handled, as were roses and carnations. K.

Baltimore.

BUSINESS BETTER.

There have been heavy rain storms and some hail, but the general effect of the climatic influence has been favorable and the development of all plant growth may be expected to be vigorous. Trade conditions improved slightly in the past week and there was something more like animation. The planting season is pretty well over and the general verdict is not satisfactory, the changeable weather not conducing to good results.

Decoration day does not constitute such an event in this location as in the west and north, and there is no great extra demand for any other material than the cheaper grades which are adapted for cemetery decorations. This year there was in some measure a double observance of the holiday. On Sunday many of the final resting places of the gone before other than sailors and soldiers who served their country, were adorned with wreaths and cut flowers, whilst Monday was the general celebration by organizations, with addresses, parades, etc., and the strewing of the graves in the public cemeteries with flowers. Stock was not quite abundant enough on Saturday, whilst on Monday there was rather more than could be worked off. Carnations were rather scant, and on the first named day peonies were not over abundant. The weather was superb and great crowds attended the patriotic celebrations.

NOTES.

Robert L. Graham and wife are arranging for a transcontinental trip and will visit Yellowstone Park and the Pacific coast, making a leisurely journey, which will be doubtless full of variety and interest. Mr. Graham has had a stall for quite 30 years in one of our oldest markets (Belair) where he has sold plants but he has decided to give it up. So many of the truck farmers have gone into raising bedding plants that production seems to be excessive and prices, under the keen resultant competition, are not remunerative. Besides this he has the responsibilities of two stores on his hands, and they, with his greenhouses, probably give him as much to look after in the way of work as he desires.

A lady in one of the residential sections had a peripatetic vendor of plants arrested one day last week for obtaining money under false pretenses. He sold her some vines with the declaration that they were clematis, but they turned out, she declared, to be weeds, and she handed the gentleman with the glib tongue which effected the sale over to the police. S. B.

Washington.

PEONIES OVER PLENTIFUL.

The Decoration day rush started on Saturday and continued Sunday and Monday. Many made up designs of immortelles in such arrangements as American flags, red, white and blue wreaths and army badge designs were disposed of easily. Galax wreaths with clusters of flowering laurel were also in great demand. Owing to the warm spell peonies were shipped to this market in great quantities and the retailers experienced great difficulty in holding the flowers for Memorial day; they sold at $1 to $1.50 per dozen. Great quantities of sweet william and mountain laurel were used for the purpose of decorating graves. The departures for early June seem to be marked in number, although the congressional world remains almost intact and expects to present a solid front until the happy day of adjournment arrives.

NOTES.

Geo. C. Shaffer's window consisted of an American eagle carrying a sash with the motto "E. Pluribus Unum." On either side was placed a shield of red, white and blue immortelles, and to the rear stood a private dressed in the old-time uniform, carrying an American flag.

Gude Bros.' Decoration day window display consisted of a large immortelle wreath made up to represent an American flag twisted and draped around the frame; the imitation was perfect and many pleasing comments were made regarding same.

The features of Z. D. Blackistone's window were cross guns draped with national colored ribbon, an immortelle wreath of red, white and blue, and a huge sago palm arrangement, the leaves of which were gilded.

Chris. Schellhorn has about the best colored roses at this season and he is cutting excellent Bridesmaid, Bride and Golden Gate. He claims the only trouble he has is that the demand is greater than the supply.

P. M. Palmer of Silver Springs brought in enormous quantities of choice peonies during the past week; he devotes a great deal of time to the culture of these flowers and has some choice specimens.

Marche & Co. showed an American flag so cleverly made that passers by mistook it for the real article; it was made of immortelles and shaped to give a waving effect.

Geo. Cooke executed the decorations for the graduating exercises of Mt. Vernon seminary, given at the Willard hotel; aside from this he has had an unusual busy week.

A large grand army badge made of immortelles, with the inscription "Phillip Sheridan Post No. 14," was the feature of J. H. Small & Sons' windows.

Theo. Diederich's sweet pea crop seems to have no end; he is practically supplying the city with them; he is also cutting some choice varieties of peonies.

Alex. Garden always seems to have such seasonable stock as the retailer most requires, of the proper sort and at the proper time. G. S.

Boston.

CARNATIONS AT UNHEARD-OF PRICES.

Memorial day of 1909 will pass into history as a day of sensations the like of which this market never before witnessed. It was a memorable one, especially for the growers, who reaped a golden harvest and who turned to their favor every advantage offered. Prices were boosted constantly, the general list varying but in the slightest degree from regular Christmas figures. A fortnight of cold and damp weather had menaced the expected crops to a startling degree which was not realized even by the growers themselves until the eve of the rush. Memorial day carnations at not less than $6 per 100 and in most cases $8 to $10 were an unheard-of proposition which made all thoughts of profit seem absurd. Regardless of the quality these prices prevailed steadily through until the end of the business and the market was absolutely cleared up. Working stock such as candytuft, gilly flowers and feverfew likewise brought top prices averaging 50 per cent more than is usual. There was not nearly enough to go around at these prices and anything that could be used at all found an opening readily. Easter lilies, which are ordinarily cheap and plentiful, were exceedingly scarce. The rose men were prepared for the rush far better than other specialists, and they enjoyed an excellent business. Killarney was the principal standard. Short stock of this and all other roses was scarce but was distributed with discretion, more businesslike than the haphazard methods of the carnation men. Richmond, although not plentiful, was able to meet the market on equal terms. American Beauty was as fine stock as has been seen this year. Demand and supply balanced well and prices ranged from $2 to $4 per dozen. Bride was, generally speaking, in poor shape. Sweet peas were as a whole poor and still a constant cry kept up for more. Everything showing the least semblance to a flower was cut in the effort to keep up with the orders. A good supply of

Galax by the case

Ever stop to think of the economy of buying your Galax by the case? **1000 cost $1.00; 10,000 or 1 case cost $7.50.** Then it is worth something to always have them on hand. Our stock is carefully selected and is sure to give satisfaction.

first quality lily of the valley was available at $3.50 to $4 per 100. A few shipments of outdoor lilacs were received, but outside of this outdoor goods were not marketable.

NOTES.

Welch Bros. were mightily pleased with their holiday business and, in spite of the short local market, were able to amply supply all the demands of their customers. The total business of the three days far exceeded the corresponding period of last year and the sale of green supplies and ferns was never exceeded.

W. H. Elliott is cutting the first of the wonderful Kaiserin rose, which is the closest competitor to White Killarney. These are the initial cuttings of an extensive crop which is the summer specialty of this establishment.

Donald Carmichael of Wellesley sailed during the week for a three months' pleasure trip to Europe. During his absence the business will be under the direct management of his foreman, C. P. Owens.

The Waban Rose Conservatories showed some magnificent American Beauty roses for the holiday trade, as good stock as has been cut this year.

P. L. Carbone is on a business trip through the west. B.

Tasmanian Apples for European Markets.

Consul Henry D. Baker, of Hobart, sends a newspaper clipping which says that 18 steamers have been engaged to carry 360,000 cases of apples from Tasmania to the United Kingdom and Germany. While the apple crop of 1909, which will be shipped during February, March, and April, is fully equal to that of the preceding year, the shipments will be 150,000 cases less. The growers are intending to market more of the fruit in Australia this year. It is estimated that the shipments from the entire commonwealth of Australia to European countries will fall 130,000 cases below those of last year.

The Knell of the Forests.

Have you heard the throb of the forest heart?
The crash as the shivering timbers part,
And a life goes out—a forest king
Reels to his fate where the ax strokes ring?

Have you seen the monarch of centuries past
Throw down his crown and give over at last,
From the struggle of years to bring to its height
The shaft reaching up to the blue and the light?
The struggle to gather from earth and from air
The elements wrought into food by his care;
To gather the waters and hold them for you
To be fed to the springs, and fed to the dew?
The struggle with drought and tempest and blast?
Oh, the doomed, passing forests! The die is cast!
Each moment that spins from the wheel of Time,
Marks a veteran's fall in his native clime.

There are deserts to-day, where a while ago,
The rain-spirit brooded, and wild buds could blow;
Where the arms of the forests were held to the sky
As a pledge that the water-springs never should dry.
But the ax of invasion swung in with its threat;
The forest-heart reeked where the ax-blade was set;
And the Earth, in revolt, gave the shafts of her dead,
But her waters withdrew! The sun burneth red,
Where Verdure once wrought at her looms, and the rain
Through the forests sung Nature's sweet, joyous refrain;
But to-day, where scorched Nature lies burned with its brand,
The death-angel broods on the wings of the sand.

Shall America, garden of earth, cast away,
The gifts of the centuries, felled in a day;
Till she stands in her poverty, branded, servile,
A target for cycles of time to revile?

—Geo. Klingle.

The Seed Trade.

American Seed Trade Association.

Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

SAN JOSE, CALIF., May 26.—C. P. Braslan predicts that Red Wethersfield onion seed will be worth $1.25 per pound at wholesale next season.

FRENCH reports of May 22 regarding the French bulb market indicate that prices on that date were firm and that liberal purchases were being made, which would not indicate a decline in the near future.

ROCKY FORD, COLO., May 21.—D. V. Burrell has a larger acreage of his specialties than usual planted at this time, planting just being completed. The soil is in excellent condition and there are no apparent reasons now why the crops should not make a good growth.

NEW YORK.—The spring run of business seems to be about over and the hard worked employes of the seed stores are looking forward to a less strenuous life, at least for a time.—C. C. Massie of Northrup, King & Co., Minneapolis, is spending a few days in this city enroute to Europe.

LOS ANGELES, CALIF.—Fred H. Hunter, for seven years general manager of the Germain Seed Co., has resigned his position. He has several propositions under consideration but before again going into active business will take a much needed rest. He will then locate again in the seed business on this coast.

ARROYO GRANDE, CALIF.—The Routzahn Seed Co. writes under date of May 25: "Crops in general, with us, are looking above the average; especially is this true of sweet peas, nasturtiums and flower seeds in general. Lettuce, salsify, tomato and cucumber are good. Onion prospects about two-thirds of a crop. Pole beans in course of planting."

CHICAGO.—The prospects now, according to the L. A. Budlong Co., are for a good crop of onion sets here, but it is yet too early to predict what the ultimate outcome will be.—Contract prices on the board of trade June 2 for grass seed were noted as follows: Prime timothy, $3.90 (nominal); white clover, $16.—Visitors: A. T. Ferrell, Saginaw, Mich.; Ernst Benary, Jr., Erfurt, Germany, enroute to California.

Braslan Seed Growers' Co.

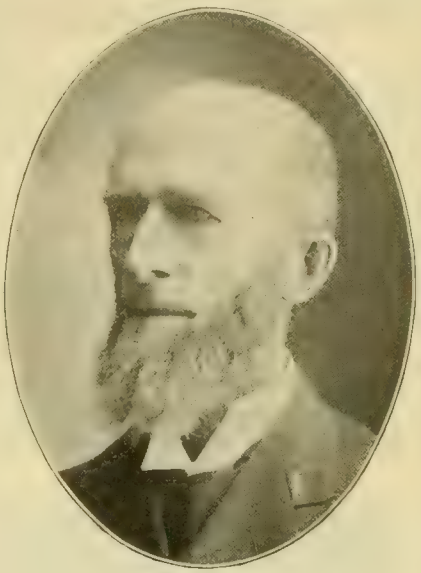
Lettuce Onion, Sweet Peas.

Growers For the Wholesale Trade Only.

SAN JOSE, CALIF.

M. Crawford's Gladioli.

A new firm at Lake Mills, Wis., engaged in growing the gladioli a year ago with a stock of bulbs obtained of me. Last year they shipped flowers to Milwaukee, Chicago, Madison, Wis., and Minneapolis with such success that the members of the firm were encouraged to make a great increase in their business, and have purchased my entire collection, except two of each kind. This is one of the finest collections in existence and it may be interesting to readers of THE FLORIST to know how it was got together, for it represents many years of effort.



M. Crawford.

I became interested in the gladiolus over 40 years ago and have obtained choice kinds from many sources in the meantime by exchange and purchase. After learning how to grow seedlings successfully I purchased all the seed that was offered by the pound in this country and Europe in one year—about 30 pounds in all. From this I raised about a million bulbs. In the spring of 1895 I purchased all the hybridized seed that H. H. Groff produced the year before—his first year in hybridizing. From this I obtained a number of fine varieties. As I have been growing acres of choice kinds for Vaughan's Seed Store for some years, I have had unusual facilities for saving large quantities of fine seed. Growing seedlings is exceedingly fascinating and I expect to continue in the work. To show the value of some of the finest, I offered Mallory & Bridge, the firm indicated above, $20 an ounce for the small bulbs of Isabel, Theo. Grant and Mrs. Donaldson, but could not buy them. This collection is made up very largely of choice seedlings, some of which have been increased to several thousand and named but not introduced. Others are few in number but of great promise. With such varieties, a rich soil and excellent shipping facilities the new firm will be well equipped for the flower and bulb trade.

Alfred J. Brown Seed Co.,

Growers for the Wholesale Trade,

GRAND RAPIDS MICH.

Nebraska Seed Crops.

Fremont, May 18.—The Western Seed and Irrigation Co. writes: "Most of our growers have their corn about planted under favorable conditions, and the vine seeds are now being planted to a large extent, with the exception of cucumber, which will not be put in the ground until about June 1 or soon after. We have had some good showers during the past week, which have been beneficial to all crops that were in the ground. Some of the farmers, however, are being obliged to plough up their oats and some of their wheat, and we are placing some additional acreage for early corn and vine seeds with these farmers, which will help us materially in placing a larger acreage of some varieties.

"It is too early to give any reports as to stands, but with a favorable season we hope to make full deliveries. We have already booked double the amount of contract orders we have ever booked at this time previous years, and have been obliged to discontinue quoting some varieties. The trade do not seem to realize the difficulty growers have in placing suitable acreage late in the season, especially for large orders, one of which we received last week covering several hundred bushels of a number of varieties of sweet corn, and several thousand pounds of a number of varieties of cucumber, melons, etc. It would be to the advantage of the trade generally if they would take the time to place their contract orders earlier in the season."

Waterloo, May 28.—The J. P. Robinson Co. writes: "The corn crops are nearly all planted and a few farmers have commenced working their crops. Reports indicate a satisfactory stand. Very little replanting has been necessary, although cool weather has retarded germination somewhat. The acreage of sweet corn is rather light, farmers showing some inclination to grow independently rather than to contract for future delivery. It will take an average crop to fill contract orders, with no excess acreage. Flints have also gone slow, although a fair acreage has been placed. Melons and squash have just been planted and cucumbers will commence to go in the ground next week. Farmers have fought shy of special crops and can hardly be blamed with present prices for elevator corn and wheat. The spring has been rather dry and cool; in fact, about the coolest we have had in many years, but it has not damaged either fruit or tender crops."

Iowa Seed Dealers' Association.

A meeting of the Iowa Seed Dealers' Association was held at the Chamberlain hotel, Des Moines, June 1, a very full attendance of members being present. The morning session was devoted to a discussion of the Iowa seed law, and the litigations which have resulted from it. The afternoon session was an open meeting, the visitors present being Henry and John Wallace, E. E. Favelle, George Franklin and Prof. Atkinson, editors of local farm papers, George A. Wells, secretary of the Iowa Grain Dealers, Prof. Pammell, state botanist, State Seed Commissioner Wright and State Inspector Fariday. The visitors spoke informally, giving their views of the Iowa seed law and its general effect in bettering conditions, improving the quality of seeds sold, both as to purity and vitality, and the seed corn betterment, as to quality, vitality and productiveness.

J. F. Summers, an Ames graduate, and practical seed corn grower, spoke on his method of testing seed corn, which was listened to with much interest. The meeting was then adjourned and the members partook of a banquet, after which the evening executive session was held. A general discussion took place, after which the following officers were elected:

C. N. Page, Des Moines, president.

Henry Field, Shenandoah, vice-president.

B. H. Adams, Decorah, secretary.

John T. Hamilton, Cedar Rapids, treasurer.

Executive committee—Charles N. Page, John T. Hamilton, Walter C. Adams, Mel. L. Webster and H. A. Johns.

True and Pure Seeds.

FROM A SEEDSMAN'S VIEWPOINT.

A paper read at a meeting of the Grand Rapids Growers' Association by L. F. Jones, of the Jones Seed Co., Grand Rapids, Mich.

As this is the first great speech I have ever made and "I am not an orator as Brutus is," I trust you will excuse me if I read the few words I have to say. The subject, "Good Seeds," is of vital interest to every greenhouse man and gardener, as well as to every dealer in seeds. If we could always be sure when buying seeds that they were true to name and pure as to variety it would be easy and the seed business would be both pleasant and profitable. While the amount of seeds not true to name or pure is very small as compared with the great bulk of seeds that are sown, it is unfortunately true that we do not always get what we buy. While mistakes must sometimes occur with the large wholesalers, the excellent system they use and their care in selecting their help probably eliminate, so far as it is possible for man to do so, the chance of mistakes in putting up orders. But no man and no system can entirely avoid all chance of error.

EVIL OF CHEAP SEEDS.

I think the greatest trouble comes in the growing and roguing of seed crops, and I think both gardeners and seedsmen are somewhat to blame, and by seedsmen I mean more especially the large jobbers of seeds. Now, I know every one of you gentlemen personally and know that the price of seeds does not influence you in buying, but the fact that many seed firms do build up a very large trade by making extravagant claims for their seeds and advertising them at prices which do not allow a legitimate profit to the grower, proves that the great bulk of the users of seeds will buy where they can buy the cheapest. This competition in prices has done more to demoralize the seed trade and to cause seed crops to be more carelessly grown and rogued than all other causes combined. I do not say these dealers do not sell good seeds, but I do claim that they do not pay the seed grower a fair profit for taking the necessary pains that must be taken to properly rogue and grow seeds of the best quality.

There is always a tendency in our improved varieties of vegetables to revert back to the original types and to degenerate, and this can only be overcome by the most careful selection. I was talking with a prominent California grower at the seedsmen's convention in Toledo. He said: "If I go to many of the large distributers of seeds and tell them I have a specially fine strain of Grand Rapids lettuce seed with which I have taken great pains and for which I must get more money, they will laugh at me and will not allow me more for the seed than they can buy ordinary stock for." I told him I did not care what he charged me if he would give me the quality. I bought some Grand Rapids lettuce seed from him, and it was very good, but last year I purchased a larger quantity and our test showed it to be absolutely worthless for forcing and I returned it. He acknowledged that they had sent me the wrong seed stock and offered to replace it with his best stock.

SEED TESTS.

I think one trouble with these growers is that they have not the commercial machine for placing the better grades of seeds with dealers who, like myself, would be willing to pay an extra price for extra quality and competition has compelled them to contract

LILY OF THE VALLEY.

seed at a price for which they cannot afford to take the pains that should be taken. All retailers are up against all of the mistakes of everyone connected with the growing and distribution of seed, as well as his own, and the man is not yet made who does not make mistakes. At present I am testing the most important seeds before selling them. It is possible to do this with Grand Rapids forcing lettuce seed, Vick's Globe radish and other seeds, for which there is a general demand and that retain their vitality long enough to allow it.

NON-GUARANTY CLAUSE.

In regard to the non-guaranty, you can readily see why a retailer cannot be responsible for the crop. Each of you gentlemen can buy enough lettuce, radish, cucumber and parsley seed for your plants for from $2 to $5 and, if it were all profit, I could not make more than the price paid for the seed, but if your crop was a failure on account of poor seeds I might be compelled to pay you several thousand dollars. See the opportunity it would give to a dishonest farmer or gardener, as all failures are not caused by poor seeds. I have known customers to have poor crops of vegetables when others with the same seeds on different ground, or planted at a different time, would have good crops.

There is but little excuse for selling seeds of poor vitality as they can be easily tested; except that during the rush of selling, when we have to reorder, there may be times when it is impossible to test, and I do not believe when seeds fail to germinate in more than once out of 100 times that it is the fault of the seed. I recall an instance a few years ago. I sold one of our best gardeners 12 pounds of an extra fine strain of Vicks' Globe radish. Now he is a fair-minded man and a warm personal friend of mine, not given to kick without cause. He sowed part of the seed and it did not grow. I think he gave it another trial and finally brought the balance of the seed back and said he could not use it. I tested it again and got a good germination. Frank Strong had the same seed and had a good stand, as did others at the same time. I had no more complaint. One gardener failed to make it grow in his greenhouse but planted it outdoors in the spring and nearly every seed grew.

The non-guaranty is to protect the dealer against the dishonest or unreasonable grower. There is no reputable seedsman who will not look into the complaints, and if he believes the seed at fault will be fair. I have paid out a good many hundreds of dollars in the past 13 years for seeds that I believe were wrong and, one strange thing about it, whenever I have had trouble of this kind I have settled for more of the seeds that caused the trouble than I sold. Not that they meant to be dishonest, but reported the amount they bought from memory and got it a little higher and, unless they bought the seed on time, I had no record and took their word. I hope to see a good effective law enacted by congress that will protect both the grower and the dealer, while it places the blame where it belongs for poor seeds and will not put any reputable seedsman out of business. Now, gentlemen, our interests are identical. Let us work together and each try to be fair with the other. I believe people are beginning to understand that good seeds are cheapest and I believe that conditions governing the seed trade are improving very rapidly.

Imports.

During the week ending May 29 imports were received at New York as follows:

J. Roehrs Co., 32 cases plants.

Vaughan's Seed Store, 18 cases plants.

McHutchison & Co., 3 cases plants.

Maltus & Ware, 71 pkgs., 2 cases plants.

F. B. Vandegrift & Co., one case plants.

P. Henderson & Co., 80 bbls. grass seed.

To others, 34 cases, 70 pkgs. plants, 48 tubs laurel trees, 100 bbls., 93 bags seeds.

SEATTLE, WASH.—The Chas. H. Lilly Co. writes: "The crop of cabbage this year will be only fair. Our stocks were hurt last winter by the extremely cold weather, but we are having a favorable season this summer."

"WHAT is your member of congress noted for?" "Well," answered Farmer Corntossel, "around here he's mostly noted for arguments that won't go down and seeds that won't come up."—Washington Star.

EARLY spraying of the onion crop with Bordeaux mixture is recommended as a preventive of and cure for mildew.

Nitrate of Soda Outdoors.

There is hardly another subject which brings up such a diversity of opinion as the use of nitrate of soda. There is no doubt that many gardeners derive great benefit from its use; on the other hand there are numbers who have used it without success. In such a case we must not condemn the article; we should rather look for the reasons. The writer has used nitrate of soda for years, with all kinds of results, and under many varying conditions. The amount that can be used with benefit, depends entirely upon the amount of other elements in available conditions—in other words, upon the amount of available phosphate and potash in the soil. This means that poor land will take only a small amount of soda, good land more, and rich land a great deal. This is just the opposite of what a beginner expects; he naturally wants to use it on poor soil, hence his failure.

Nitrate of soda is more dependent upon potash than upon phosphates. Realizing this, we have for some time, made it a rule to always apply soda in mixture with sulphate of potash. At present we are using one-half the weight of soda, in sulphate potash of high grade. The results are extremely gratifying. This mixture is used as a top dressing, generally broadcasted—where we have used manure and complete fertilizer before planting and the nitrate potash application is made after the crop has started. We screen the soda through one-eighth-inch mesh, to get fine division, and pulverize the potash, and mix intimately. It improves both chemicals, makes the soda more dry and prevents the potash from blowing away in windy weather.

Applied at the rate of sowing grass seed, at intervals of two weeks, crops can be forced remarkably. To derive benefit from nitrate of soda, it should be used on young plants; they need it most, and its greatest value is in the spring months, when the soil temperature is too low for the formation of organic nitrates. To the market gardener a gain of a few days means either gain or loss with many crops—that is, the prices obtained for crops ahead of the general run, are so high, that it will pay to use the nitrate. Some claim that nitrate of soda impoverishes the soil. This is true in this sense only—that the increased growth demands more phosphates and potash which, if not supplied, must come from the soil finally. A crop is entirely dependent upon soil moisture; a soil full of humus holds most moisture, hence will give largest returns; while a purely mineral soil will lead to disappointment. MARKETMAN.

I ALSO GROW LARGELY SEEDS ON CONTRACT.

List of my novelties in flower seeds for 1908 sent on application.

Cucumbers in England.

Only those who are specially engaged in the trade can estimate to the full the value of a clean growing crop. We are more than fortunate with our March-planted stock, as not only is the cutting good, but the plants are the picture of health. Three houses followed on after a successful flower cutting season from bulbous stock. After cucumbers chrysanthemums will follow; thus the houses are engaged all the year. With the early March-planted cucumbers, the minimum amount of fuel is consumed. Now as to varieties, we have several in use; but our attention was called to the Rochford's Market, not only on the plants, but also on the packing bench when cut. As the Americans have it, our cucumbers are too large, and certainly this variety is large, but is quickly grown. Butcher's Disease Resister is too long in the neck for first fruits, running out of this later on. The newest addition from Worthing is Sparkes' Exporter. It is a very prolific variety, but lacking the size of Rochford's. Those who, like myself, can go back to the days of Rollison's Telegraph appreciate the present varieties for marketing.

How long can houses of cucumbers be kept clean and healthy without the aid of syringing the foliage is a question, but up to now all is right. Regular stopping and tying, with a weekly surfacing, are first-class aids to successful cucumber growing. An overload of young fruit may be well thinned out early, so that while less fruit is being developed the plants are given a new lease of life in their young bearing days. Cucumbers, to be well grown, must never get out of the grower's control; the result will be disappointment. —Journal of Horticulture.

Canadian Potatoes for United States.

Consul A. G. Seyfert writes from Owen Sound that the demand for potatoes in the United States this spring has been a good thing for the Canadian farmers in that district. The soil and climate there are well adapted to the raising of large crops of an excellent quality of potatoes. American buyers have bought and exported over 50,000 bushels during the months of March and April from that locality. The most of them were shipped to Cincinnati, Indianapolis, Chicago and Pittsburg. The average price paid was 50 cents a bushel. The first boat that left the Owen Sound harbor had 7,500 bushels on board for the Canadian northwest. The price paid was about 15 cents a bushel more than in other years, caused by American demand. The potato is one of the main crops of the Georgian Bay farmer, and he raises 200 to 350 bushels to the acre. Commenting on this the bureau of manufactures, in the Daily Consular Reports, says: "The imports of potatoes into the United States this spring have been enormous. The receipts for the first three months of 1909 were 3,629,158 bushels, against 128,676 bushels in the same period last year. Heavy cargoes have come from Europe, and shipments have even been made from Mexico to this country."

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N. Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June 9-11, 1909

MILWAUKEE, WIS.—F. Law Olmsted, of Brookline, Mass., has been selected as landscape expert of the Metropolitan park commission.

BLOUNTVILLE, TENN.—The Globe Nursery Co. is busy on the 500 acre farm purchased last season of J. M. Fain nearly 80 acres of the land being already in cultivation.

CHICAGO.—Those interested have little doubt that the forest preserve district, authorized by the bill just passed at Springfield, will be very popular and that the sentiment of the people will be overwhelmingly in its favor.

DO not spray regularly and indiscriminately, but watch the trees closely and spray on the first indication of its being necessary is the advice of a well-known British authority. This seems good advice tending both to economy and efficiency.

EARLY SPRING is described by the Department of Agriculture as the best time to plant willow cuttings for basket and other work. Wood one year old is the best, and the cuttings should be planted as thickly as possible consistent with keeping the soil clean by cultivation.

THE Vermont Agricultural Experiment Station has issued an illustrated leaflet on the gypsy and brown-tail moths advising growers to be on the watch for these destructive insects and send specimens to the experiment station at Burlington. The illustrations show the insects at various stages, the eggs and methods of control. The most effective of these are soaking the eggs with creosote in fall, winter and spring and cutting off and burning the webs in winter.

NORTH WALES, PA.—Thaddeus N. Yates & Co. write: "In reference to the note in THE FLORIST of May 29 will state that we wish to correct statement made regarding our nursery at North Wales. Wm. M. Frost of Germantown was the purchaser of the ground. He did not purchase any of the nursery stock and we expect to continue in business as we have made a very satisfactory lease with the new owner. Mr. Frost simply bought the ground for an investment and we sold him the ground, but not any of the nursery stock."

THE premium list of the sixth annual exhibition of the American Peony Society, to be held June 8-9 at the Cottage Gardens, Queens, N. Y., is to hand. In the commercial classes there are 27 prizes ranging from $15 to $5 for collections and individual varieties, while in the amateur classes there are 14, ranging from $5 to $2. Entries must reach Manager R. T. Brown, Cottage Gardens, at least two days before the exhibition opens and all express charges on exhibits sent must be prepaid. Consignments must be sent addressed Cottage Gardens Co., Queens, Long Island, N. Y.

LAST SUNDAY, May 30, was "Lilac day" at Highland Park, Rochester, N. Y. It was estimated that from 30,000 to 35,000 people visited the park during the afternoon. The lilac collection comprises about 193 varieties, and while they were not in full flower they looked remarkably beautiful in the partly expanded clusters and unopened buds. The park, though, was a harmonious medley of flowering trees, shrubs, perennials and late blooming tulips. Early blooming azaleas and rhododendrons, crabapples, redbuds, spiræas, white-flowering dogwoods, ornamental pears and late flowering plums were some of the things that added

Native Forest Cover at Seattle Exposition.

See Last Issue, Page 901.

brilliancy to the scene. The park band of 50 trained musicians played during the afternoon in the pavilion. The weather was delightful, and the well-dressed crowds, all quiet and orderly, parading or resting on the gentle slopes, formed a scene that perhaps could not be duplicated in any other place on the American or European continents.

Trees and Shrubs at Rochester, N. Y.

The flowers on all spring-flowering trees, shrubs and perennials have extended considerably beyond the duration of their usual periods on account of the prevailing cool conditions and the abundance of moisture in the ground. Ornamental peaches, plums, cherries, crab-apples, magnolias, spiræas and most other shrubs have all flowered most profusely. Lilacs appear to be the only shrubs that are shy in blooming this year, but there is enough of them to be interesting. The double flowering peaches, with respectively pure white, pink and dark red flowers, were in full bloom on May 15. The double white-flowering peach with flowers almost two inches in diameter is a very beautiful object in bloom.

Watson's plum (Prunus Watsoni) was in full bloom on May 17. It forms a dense compact shrub and is quite showy in bloom. The beach plum (Prunus maritima) was in full bloom May 20. Although a common wild shrub along the Atlantic seacoast from Virginia northwards, it is a handsome shrub in cultivation. Prunus Utahensis was in full flower May 23. The branches, covered with numerous three-flowered clusters, are very showy. The European bird cherry (Prunus padus) came into flower May 18 and is now in fairly good bloom.

Magnolia Lennei opened its first flowers on May 18. The blossoms, with their purplish red exteriors, are very attractive. Magnolia Berozzoni, which we mentioned in last notes as coming in bloom on May 14, remained in good bloom for 10 to 12 days. It is a noteworthy form. The blossoms are frequently five inches in length, pure white, with a purplish pink tinge towards the base on the outside. Magnolia obovata came into bloom May 20. In a severe winter this suffers considerably unless well protected. It is flowering unusually well here this season. The purplish red flowers are attractive. Magnolia Soulangeana nigra, which does not appear to have any resemblance to M. Soulangeana, but may possibly be a seedling from it, came in flower about May 23, and was in full flower May 25. It is the darkest flowered magnolia we have. The blossoms are dark purplish crimson outside and deeply tinged with purple red inside.

The bridal wreath (Spiræa prunifolia floreplena) was in fairly good bloom on May 15 and made a good show for 10 days. S. Media (confusa) came into flower May 23 and is now in good bloom. S. Pikowiensis is now at its best. The branches are thickly covered with white clusters and are very showy. The flowering currant (Ribes aureum) came in flower May 15. The yellow flowers are showy, and their pleasing fragrance perfumes the air in its vicinity. The alpine currant (R. alpina) came in bloom about the same time. The greenish yellow clusters are attractive and the compact dense habit renders it a good decorative shrub.

The Japanese crabapple (Malus floribunda) came in flower May 21. The reddish buds and the rose-tinted blossoms are very showy. The variety Atrosanguinea, which blooms at the same time, has dark purplish red blossoms and is a handsome form. They are now in good bloom. What a glorious revelation of beauty these crabs are. There are handsome specimens in Highland Park, which are surrounded by admirers, every afternoon, when in flower. Parkman's crab (M. Parkmani) came in bloom about the same time as the last and has semi-double, deeply rose-tinted nodding blossoms which are remarkably handsome. The Chinese crab (M. spectabilis) is now in good bloom and the semi-double pinkish red, or reddish rose blossoms are beautiful. The Siberian crab (M. baccata) has large white or whitish blossoms and is now passing out of flower. The dwarf crab (M. Toringo) has pinkish white flowers resembling M. floribunda and is now in good bloom. A crab-apple recently introduced from Siberia (M. Niedwetzkyana) was in flower May 23 with large reddish flowers. The garland crab (M. coronarius) came in flower May 28 and the fragrant pinkish rose blossoms are remarkably pleasing.

Viburnum Carlesi, a new species from China, introduced by a Japanese firm, who sold the stock of it to the Lemoines of France, gives every promise of being a most important and valu-

able ornamental shrub. It was in full flower May 20 and the flowers remain in good condition for about 12 days. The buds, before expanding, have a pink tinge and the open flowers have a rosy white appearance and are about three-fourths of an inch in diameter and have a most agreeable perfume. The oval, dentate, bright green leaves bear a little resemblance to V. Lantana. It has been in the nursery for two winters in a cold exposure and seems to be quite hardy. We feel certain there will be much demand for this handsome shrub when it becomes known, and any nurseryman who can secure a good stock of it will be fortunate. Viburnum Lantana came in bloom May 23 and is now showy. V. Wrighti is now unfolding (May 29) its flat cymes. The buds before opening have a perceptible brownish pink tinge. V. tomentosum is just coming in bloom. JOHN DUNBAR.

Montana Forest Notes.

John S. Preston, deputy supervisor of the Bitter Root national forest, left April 26 for Trapper Creek, where he will look after the establishment of a proposed forest nursery at that place. It is planned to set aside several acres of land in that vicinity, which will be planted with tree seeds and seedlings, in pursuance of the general plan of conservation of the national forests.

Alfred Grigg of Sterns has been appointed assistant ranger on the Missoula national forest and is now stationed in the country north of Ovando.

Henry Kroger of Phillipsburg has been appointed as a guard on the Missoula national forest and was assigned to duty May 1.

Proposed City Nursery for Chicago.

Picturing the tree as a sanitary and prime factor in the beautification of a city, City Forester Prost in an address at the conference of women's clubs at the Esther Falkenstein settlement house recently urged the establishment of a municipal nursery and subsidiary branches. The new forester declared that eastern cities have found women's clubs of great assistance in the elimination of obstacles which confront such movements. He asserted that the cultivation of an adequate number of trees cools and shades communities, thus lowering the death rate among children and aged men and women.

Mr. Prost, who was making his first public address since his appointment, discouraged the raising of box elders in the Twenty-eighth ward and suggested the cultivation of Carolina poplars and elms. Mrs. Falkenstein deplored the lack of a field house playground in the community for the benefit of children and mothers.

ELMIRA, N. Y.

Use of Poisonous Gas to Destroy Insects.

It is now more than 20 years since the first attempts were made to destroy scale insects on fruit trees by means of a poisonous gas. The gas used is known as hydrocyanic acid gas, and it is extremely poisonous to human beings and domestic animals as well as to insects. This method has gradually increased in popularity until it has largely displaced all others in the orange and lemon orchards of California.

In order to use the gas effectively the tree is covered with a tent. A small quantity of sulphuric acid is dissolved in a small quantity of water in a jar which is placed on the ground in the tent. The proper amount of potassium cyanide is weighed out, carried into the tent by the operator and dropped into the jar, after which he gets out quickly, closing the tent after him. The gas forms very quickly, rises, and fills the tent, destroying all or most of the scale insects within an hour. The tent is then taken down and placed over another tree. In the use of this gas there have been a variety of methods employed, much variation in the amount of chemicals used, and much difference in the results secured. In order to determine the most satisfactory methods and proportions of chemicals, the Department of Agriculture sent out an expert fumigator to the Pacific coast to conduct a series of experiments with hydrocyanic acid gas. The first report on this work has just been published in a bulletin entitled "Fumigation Investigations in California." By an extensive series of experiments with trees of different sizes, with different proportions of cyanide, sulphuric acid, and water, and fumigation at different seasons, the experimenter has determined the most economical and effective method of dealing with the purple scale and his recommendations are now being followed by many successful fumigators. These experiments will be continued and extended so as to cover every phase of the work against all the principal scale pests. It is believed that this work will result in a great saving to the citrus fruit growers of California, and at the same time make fumigation more uniformly effective.

"BUSINESS NECESSITY"

Edition of 1909, Postpaid, $3.00.

THIS is the only term which describes the American Florist Company's Directory, just out. This book, 548 pages of facts tersely told, is issued annually and is an aid to business and money making which no wholesaler or traveling salesman can afford to be without. It contains the name of every Florist, Nurserymen and Seedsmen, arranged both by states and towns and alphabetically; and lists of experiment Station Horticulturists, Landscape Architects, Horticultural Supply Concerns and Leading Foreign Firms. It will save many times its cost by enabling you to cover America with your catalogue and at the same time waste no printed matter or postage on dead names.

C., $27 00 per 1000; 2½-in., $35.00 per 1000. **2,000 Pacific Supreme** and **White Cloud,** at same price. **Dorner's new Golden Eagle,** $10.00 per 1000. No more Virginia Poehlmann (sold out) until July 1. All standards. Frost, Touset, Enguehard, Golden Wedding, Appleton, Nonin etc., 2½-in., $2.50 per 100, $23 00 per 1000; R. C one-third less.

I. M. RAYNER, Greenport, L. I., N. Y.

ENGLEHART, ONT.—D. Kerrigan is now superintending the park systems on the Temiskaming and Northern Ontario railway and is building a King Construction greenhouse 30x75 feet for growing bedding stock.

PHILADELPHIA PA A fine exhibition of peonies was held at Horticultural Hall under the auspices of the Pennsylvania Horticultural Society May 27. Although not a large show, the quality of the flowers was excellent.

LOS ANGELES CALIF.—T. Takahashi, proprietor of the New Yokohama Nursery, was painfully injured May 20, when his horse ran away and dragged him more than a block. Mr. Takahashi, who was pulling hard on the lines, was thrown over the dashboard. His right leg was fractured above the knee. He was treated at the hospital, and later removed to his home near Eastlake park.

St. Louis.

BEDDING PLANTS SCARCE.

The weather is now summer like, and we have had plenty of rain. There seems to be quite a scarcity of bedding stock. Carnations and roses are showing the effect of the weather, and are daily becoming poorer. Loads of peonies are in. Sunday morning opened up raining steady. Closing of schools June 1-15 will see the last effort to hold up the season, and then we can look for summer dullness. Memorial day many flowers were used. Carnations brought three to four cents, and in many instances the quality was poor. A great many outdoor flowers were used, a good portion using flowers from their gardens for cemetery decorations. Everything was plentiful; hardy ferns were in demand, and appear to be scarce.

NOTES.

We regret to announce the death, May 28, of George Waldbart, Jr., son of Alexander Waldbart, after a lingering illness, of Bright's disease. He was 30 years of age, was a dutiful son and was buried from the family residence on Lawton avenue. Deep sympathy is extended to Alexander Waldbart, his wife and family, in their sad bereavement.

Paul Scheider, whose boiler burst and who had everything frozen up, intends to build two houses this summer for carnations.

Our Pastimes.

Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.

Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

At New York.

MAY 28.

The bowling team seems to have taken a new lease of life. Several of the old veterans, including John Donaldson and Harry Bunyard, were on hand for practice on the night of May 28 and they, with the remnant that has been hanging on and hoping against hope, made a fresh start. Donaldson made the highest score, with Bunyard second, as follows:

Donaldson	178	177	201
Bunyard	129	134	177
Shaw	133	122	121
Scott	137	139	158
Meconi	125	122	137
Faulkner	131	100	...

Why He Perished.

"What happened to Rollignan?"

"He drowned."

"And couldn't he swim?"

"He did, for eight hours; but he was a union man."—Gunther's Magazine.

JOLIET, ILL.—Wm. Moran has opened a store in the Hanis building.

LEBANON, MO.—Ernst Beck is adding a new house for carnations, 27x175 feet, to his plant.

CHEYENNE WYO.—C. H. Garwood is building a new greenhouse at his place on Ferguson street. He is using cement blocks for the walls.

ALBERT M. HERR, Lancaster, Pa.

Seattle, Wash.

The spring trade has far exceeded any other year here on account of this being exposition year. Every one who owns a home, no matter how small or big, is spending more in decorating the grounds than ever was done before and there has been an especially large sale on cactus dahlias, the exposition flower. The Alaska-Yukon-Pacific exposition opened to the public on June 1 and, to the credit of the officials, who have pushed the work through, every building is complete, something that never happened with any of the other expositions held in the United States. The grounds, under the supervision of Frederick Dawson, of Olmsted Bros., will be something that few of the visitors from east of the Cascade mountains will see again, as the fancy coniferæ, hollies and other evergreens that thrive in this semi-tropical climate can only be seen to perfection in the Pacific northwest.

NOTES.

The Burdett Co.'s new store, recently opened at 912 Third avenue, is very fine. It is all original and planned by the energetic manager, H. B. Burdett. The salesground and nursery at the corner of First avenue and Dennyway have been enlarged and more ground added; the facilities for handling nursery and greenhouse stock have been more than doubled.

The Interlaken Nursery and Seed Co. has opened a new store at the head of the public market and under the management of Frank Stevens is doing a fine business in seeds, nursery stock and cut flowers.

This will be the banner year for the florists, as the city will be full of visitors from all parts and especially from Alaska, as the gold miners are liberal spenders for flowers.

N. C. MOORE & CO., **Morton Grove, Ill.**

Forcing Bulbous Plants.

A. Vanden Heede, in the Moniteur d'Horticulture, gives an explanation of the disappointments which sometimes occur in the forcing of Dutch bulbs, and which, he says, are invariably the fault of the process. The first requisite, he says, is a plentiful root growth, before an attempt is made to force the bulbs, as the plant must be enabled to absorb a great deal of water in order to nourish and develop the bloom. To this end, the bulbs should be potted as soon as they are received and placed in the dark, preferably buried in a bed of fine ashes or sand and covered at least four inches with the same material. The second condition, less known but equally indispensable, lies in the character of the variety forced; one cannot successfully substitute a second early variety for a first early or a late variety for one of middle season. It becomes a matter of knowledge of varieties, and, for the guidance both of florists and amateurs, he gives a useful list of varieties for the various months, which we condense below.

HYACINTHS.

In October, white Roman, in November, colored Roman; in December, Dutch hyacinths, which require a thorough preparation.

TULIPS.

In October, Duc van Tholl (various); in November and December, the double Tournesol, and its yellow variety, give very satisfactory results; in January, Pottebaker (white and yellow) Chrysolora, La Reine, Rose Gris de Lin, Duc de Berlin, Cottage Maid and Joost van Vondel. In February, a still wider range, as Canary Bird, Brutus, Duc Gordon, Duchess of Parma, Golden Prince, Fairy Queen, Grand Duke of Russia, Immaculee, Ophir d'Or, Rembrandt, Vermilion Brilliant, Proserpine and La Precieuse Maximus. In March, all the varieties which are grouped under the name of early, if properly rooted, may be forced, but the late sorts, Parrots, Byblomens, Darwins, Gesneriana, etc., may not be forced until April with any certainty of success.

Most narcissi should not be forced before January, when Paper White, Double Constantinople and other polyanthus sorts do well. These may be followed by N. poeticus praeco grandifloras, and in February by the whole tribe of trumpet varieties and the double sorts. In forcing narcissi care should be taken not to give too much heat, for fear of long and weak stems; give as much light and air as possible. Forced bulbs, when out of bloom should be gradually dried off and planted later in the open ground; they cannot be forced two years successively.

ADVANCE
VENTILATING APPARATUS

Shipped a Baltimore firm four machines May 4. On the 17th we have another order from them for machine with a statement that the machines were more than satisfactory. Since then two other florists have ordered machines. Our line speaks for itself—all we ask is a trial to convince that we have the best on the market. We guarantee satisfaction or your money back. Free circulars and free estimates for the asking.

Hammond's Slug Shot is Sold by Seed Dealers all over America

HAMMOND'S SLUG-SHOT — I SLAY BUGS — 1880 1880 — KILLS INSECTS, SAVES FOLIAGE — TRADE MARK

A Grand Show of ASTERS

The Station Agent's Plan.

My Aster beds are a strip of ground along the railroad track of the Central New England. For years it has been my pleasure to have a grand show. The most troublesome annoyance which I have had is the **Black Beetle** and the **Striped Bug**—these pests will skin the whole bunch if we let them alone, but we don't let them alone, for as soon as the plants are well grown I just take Hammond's Slug Shot and a bellows and go over the whole. On a still day **dust settles everywhere.** Then when the blooms begin to open we give them another dose, and we have the flowers. This year we let them go and the bugs or beetles got a start and we started for them but they did us damage. Now for a good many years I have known Slug Shot and have used it, and there is no use trying to raise Flowers or Fruit or Vegetables without you watch them, because as sure as the sun shines you have Bugs, Lice or Beetles which you must get rid of. Now on Cucumbers the Striped Bugs play havoc. You told me once to put some Slug Shot in water and sprinkle the rows. When that is done the Cucumbers grow. The Cherry trees will curl their leaves with lice; if you can blow Slug Shot over these ends the Slug Shot sticks to the sticky mess which comes where these lice are and they do not spread,

Yours respectfully,
LUTHER BRUNDAGE, Billings, N. Y., October 25, 1908.

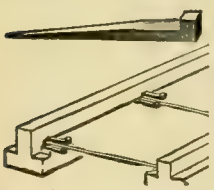
MASTICA

FOR Greenhouse Glazing
USE IT NOW.
F. O. PIERCE CO.
12 W. BROADWAY
NEW YORK
MASTICA is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass, as occurs with putty. LASTS LONGER THAN PUTTY. Easy to apply.

THE BEST WAY
to collect an account is to place it with the
National Florists' Board of Trade
56 Pine Street, NEW YORK,
WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.



Siebert's Zinc Glazing Points.
Good for small or large glass, do not rust, easy to drive 5/8 and 7/8 inch. Per lb. 40c. 5 lbs. $1.85. 20 lbs. $7.00.
VAUGHAN'S SEED STORE, Chicago or New York.

BIG RAPIDS, MICH.—Chas. Buskirk is having an addition of 18x72 feet built to his greenhouse.

SYRACUSE, N. Y., May 24.—At least 16 different varieties of violets have been found in Onondaga county by Mrs. L. L. Goodrich of the Onondaga Academy of Science. The last meeting of the society was devoted to "Early Wild Flowers." Prof. W. L. Bray of Syracuse university discussed "The Field Horsetail" or equisetum, and Mrs. Charles Pratt talked about bloodroots. Mrs. Goodrich has made an extensive study of violets, of which she says she has found 16 wild varieties, and believes there are several others. One, an exceedingly rare species, Viola pedatifida, was found by her, but she refused to make public the locality for fear of vandals. If anyone is sufficiently interested and will not tell anybody else she is willing to confide to them the secret. Rev. Dr. W. M. Beauchamp regarded "Local Orchids" as one of the most interesting families of plants. Between 30 and 40 wild varieties, he said, were known in this county, and there are more. Lady slipper, he said, was the common name, but he called them moccasin flower. Whip-poor-will shoe, he said, was the name given by Onondaga Indians to the plant.

Scollay's Plant Sprinklers

FOR CUT FLOWER TRADE. Also the

Scollay Putty Bulb

FOR GLAZING GREENHOUSES, Etc.

The Scollay Plant Sprinkler is in its 35th year. Thirty-five years of experience should count for something—we have given attention to quality in every respect—making of seams—selection of high-grade rubber. During these 35 years there have appeared more than 35 imitations, all the way from hand levers—tee ends—breakable tops down to Chinese and Boston Blowers—and, after all, the fact remains the same, that we are still the real thing in rubber sprinklers, etc. No one is so new or old in the cut flower trade that he can keep shop without **Scollay's Rubber Plant Sprinklers.** Every sprinkler guaranteed free from imperfection in manufacture.

For Sale by All Prominent Seedsmen.

Pittsburg.

EVERYBODY HAPPY.

At this writing wholesalers and retailers are highly elated over the results of their labors. In one sense Decoration day is a very unsatisfactory one, due to the very warm weather.. Stock sold up very clean, colored roses, particularly pink, were very scarce; peonies were in demand with a good supply. Monday found the market quite bare of flowers.

Randolph & McClements had the Taft decoration at the Fort Pitt hotel Saturday, which was a very pretty arrangement of American Beauty roses, white peonies and asparagus.

W. E. Patton of Sewickley made up a floral key which his daughter tendered to President Taft on his visit to that place. The emblem showed some clever work.

J. E. Bonsall, Salem, O., is consigning his cut of Kaiserin and Carnot roses to the McCallum Co.

John Young of Winter reports his business away ahead of last year, both in cut flowers and plants.

Otto Kalreuth, Wheeling, W. Va., has opened a retail store in that place.

Chartiers Cut Flower Co., McKee's Rocks, is remodeling its store.

Visitors:—Griffith of J. S. Crall Co., Monongahela City; Max Schneider of Edwards Folding Box Co., Philadelphia; J. W. Glenn, Kitanning—Misbacher and E. & H. Levy, New York; E. W. Garland. Finleyville. J.

TRENTON, N. J.—Wm. H. Skillman, who, it will be recalled, was sentenced to five years' imprisonment for forging a relative's will, died May 23 in the state prison here.

Lexington, Ky.

At the Queen & Crescent railway depot Lucien Le Clere is in charge, and he is doing good work there. The work of setting out the flower beds on the lawns has been begun and will be done on a larger scale this year than ever before, it being planned to use over 10,000 plants in ornamenting the premises. Mr. Le Clere was formerly florist and landscape gardener at the Western Kentucky lunatic asylum at Hopkinsville, the railway company's large greenhouses having been leased to him under a contract to furnish all the plants necessary to keep the grounds at the top in the matter of beauty, after which he does whatever general floral business his supply of plants will permit.

Another house will be erected at the J. A. Keller estate this spring for carnations. The house will be 30x200 feet, and will be planted with all the best varieties.

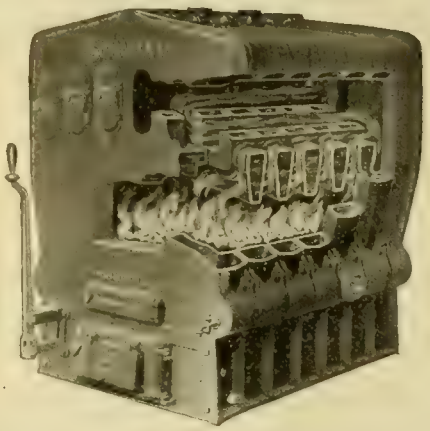
Anderson & White, the lady florists on Georgetown street, are very busy planting out flower beds at the cemeteries. C.

KILL PLANT BUGS and DOG FLEAS

with Lemon Oil Insecticide, adding 30 parts water. No odor, no poison—advantages over Fish Oil or Tobacco products. Used everywhere. If not sold by your seedsman, write **WEATHERBY BROS.** Baltimore, Md., for full information.

LOS ANGELES, CALIF.—The Floral Association is anxious to get rid of City Forester Harper who, it is stated, has no knowledge of forestry.

FAR ROCKAWAY, N. Y.—Axel Lindstrom has been awarded $2,000 as compensation for the death of his son, caused by carelessness of employes of a telephone company in allowing loose wires to dangle about on a lawn, where the boy came in contact with them.



The Burnham

You know has deep cross fire channels with side flue openings which make each section **equally efficient**—you are convinced that for greatest economy it is absolutely necessary that they shall be equally efficient. You have found out it is the only greenhouse boiler made that way.

THE ALLED TRADES.

The Morehead Steam Trap.

This device has been installed recently in quite a number of greenhouse establishments by the Morehead Mfg. Co., Detroit, Mich., including the following: Gude Bros. Co., Anacostia, D. C.; Jos. P. Brooks, Morton Grove, Ill.; Jos. Heinl & Sons, Jacksonville, Ill.; Phoenix Nursery Co., Bloomington, Ill.; Sherman Nursery Co., Charles City, Ia.; Richey Floral Co., Albia, Ia.; The Bidleman Greenhouses and A. A. Howard, Wichita, Kans.; T. J. Metcalf, Madisonville, Ky.; J. Williams Beal, Boston, Mass.; Stephen Hyde, Carthage, Mo.; W. E. Poundstone, Joplin, Mo.; Carl Steinmetz, Raleigh, N. C.; W. A. Helfer, Akron, O.; Harry W. Pierce, Wilkesbarre, Pa.; Millbrook Lea Greenhouses, W. Whiteland, Pa.; Joy Floral Co., Nashville, Tenn.; Dwight Greenhouses, Janesville, Wis.; Geo. Street, Orillia, Ont.; Camille Legare, Montreal, Que.; Whittaker Bros., Cornwall, Ont.; Wm. Sylvester, Cummings Bridge, Ottawa, Ont.

Greenhouse Heating.

ED. AMERICAN FLORIST:—

I wish to heat a greenhouse 30x80 feet with hot water. The house contains two sections of 30 and 50 feet respectively. The smaller section is built against the boiler shed and to be kept at 60° to 65°; the larger section has glass end and is to be kept at 50° to 55°. The lowest outside temperature is 10° above zero; height of walls five feet with 18 inches of glass; height of ridge 12 feet. All benches are raised.

1. Will a boiler with 18x25 inches grate surface do the work?

2. How many 3-inch flows and how many 1½-inch returns are needed in each section?

3. If the boiler with above grate surface is large enough, can I run the flows required from one 3½-inch pipe? My boiler has only one flow but two returns. The boiler is a Lord & Burnham sectional.

4. How would you pipe the house?

G. D.

1. While a grate surface of about four square feet is generally desirable for a house of this size, under the unusually favorable conditions a grate 18x25 inches would probably answer.

2. While one 3½-inch flow pipe would answer, it would be better after carrying it into the house, to divide it and run three 2½-inch flows. About twelve 1½-inch returns would answer for the cooler portion and 15 for the part requiring at least 60°. I would prefer, however, to use 2-inch pipes for the returns in which case 10 and 12 respectively would be required for the different houses.

3. A 3½-inch flow could run from the boiler into the house and the returns could be collected into two 2½ or 3-inch pipes and carried to the boiler.

4. The arrangement of the pipes would depend a good deal upon the crops to be grown and the location of the benches. At any rate, it would be well to have two of the flows and at least one-third of the returns upon the walls of the house. If raised benches are used, the other returns could be distributed under them. L. R. T.

Helena, Mont.

Trade is decidedly good. Montanans are keen horticulturists, and having heard that home products are the best, the local nurseries have reaped the benefit. The State Nursery is up to its eyes in business, and an additional staff has been engaged to cope with the pressure. There is little time for anything but trees, shrubs, plants, seeds, cut flowers—these good ones. All other interests of the workers (even those in mines) have to take a back seat. Victor Larson, manager at the nursery, has just returned from a visit to Sweden and France, and "beauties" are booming. Another local establishment, that of Charlie Horn, is on the up grade. The season is very late, potatoes and trees having been frozen when their safe planting seemed assured.

Boilers, Tubes, Flues, Etc.,

at Wrecking Prices!

If you intend to increase the size and capacity o your greenhouse or make any repairs for the coming winter, be sure and write for our low estimate on your requirements before placing your order. SCHOOL EXERCISES CAUSE DEMAND.

We have been having a busy time for the past two weeks with the various school commencements. In addition to the many city schools, there has been a splendid demand from surrounding towns, which have contracted the sweet girl graduate bouquet habit. Not one can be launched out into the world without her armful of beautiful bouquets or handsome baskets and it is quite the thing for the trade. The demand has been so good that the floral stores have kept their clerks busy far into the night. This week there will be two decoration days. May 31 the Nation Decoration day and June 3 the Confederate. There is one large national cemetery near this city, at Madison, but soldiers who died or were killed during the war are buried here and few if any have living relatives here, therefore but few flowers are purchased or laid upon the graves. Each grave is decorated with a United States flag, speeches are made, songs are sung, but there are very few flowers used. On June 3, when the Confederate graves are decorated, wagon loads of flowers find their way to Confederate circle at Mount Olivet, but few of them are purchased at the florists. If the latter wishes to retain his popularity he will empty his yesterday's roses and pour out his surplus stock as a gift to aid in the decoration. Stock has been very good and in the main abundant. Some shipped in flowers were used while the biggest commencement demands were on.

The Joy Floral Co. has plenty of roses still, American Beauty leading in quality, being now the best rose to be had; Killarney grows smaller as the heat increases; Bride and Bridesmaid are good; Perle is not grown at all any more for this market. Both the Joys and Geny Bros. have plenty of Harrissi lilies on hand and have had fine sales on them for both commencement and funeral work. Candidum lilies are now flowering in the open and are fine in quality. Peonies were used in bunches for commencement flowers, some splendid specimen being shown in the pink varieties of a rich rose color. These are now all due as their season is short.

McIntyre Bros., who have a fine range of houses, and who do an active floral business along all lines, are industrious and successful growers of plants and have many varieties which are being sold rapidly.

Arnold Schmidt is a successful grower of plants and is disposing of a great many.

Haury Bros. are in the market every day and are doing a fine business.

J. T. Dawson sells from a wagon at the market house and makes good money.

Our Supplements.

Subscribers should see that they get copies of the fine supplementary illustrations showing high grade design and decorative work. These fine supplements appear with each issue and should be carefully preserved, as they mean much to the retail florists in dealing with their customers, illustrating as they do the various kinds of work that the everyday florist is called upon to perform.

The papers in which the supplements appear should be likewise preserved, as they contain much valuable data with regard to these special illustrations. Subscribers should see that they get every issue as otherwise they may miss some of this high grade work.

SUGGESTIONS FOR PLANT GROWERS.

Cannas.

The value of cannas as pot plants for a display in late summer is not sufficiently appreciated. They are very showy and easily grown and stock shifted on now from small pots into 6-inch will make fine flowering specimens in July and August if run cool right along. When large specimens are needed for the decoration of conservatories or corridors several plants may be placed in a pan and grown on, taking care that only one variety is placed in each pan. The ordinary greenhouse or frame treatment suits them well and it is only necessary to water freely and feed regularly when the pots or pans are well filled with roots. The compost should be rich in the first place and occasional fumigation will be necessary to keep green fly in check.

Stock Geraniums.

While it is not necessary to keep back fine plants for stock, yet a sufficient number of the bedding geraniums must be reserved for this purpose. Rough, badly shaped plants that are not exactly suitable for sale will do well for stock, and where, say 2,000 plants are needed for sale next season at least 100 stock plants should be saved. The soil where geraniums are to grow should not be too rich, but, on the other hand, it is growth we are after, not flowers, consequently there should be sufficient nutriment to cause this to be free. We know of cases where geraniums for stock have been planted for years on the same soil, though they never give good stock in any quantity. This is not good practice and is worse than an over-rich soil, especially should the summer prove hot and dry. Keep the flowers picked off the plants from the first to induce a free growth; pinch the points of the shoots and a good, bushy habit will result.

Cyclamens.

It is necessary now to get all the growth possible into the cyclamens. Spread the plants out well on a bench near the glass in a low span-roofed house and shade them all day long, keeping up a moist atmosphere by frequent dampening of floors, benches and between the pots, but only spraying the plants overhead occasionally. By shading we do not mean keep them in the dark. They need all the light possible and for this reason should be near the glass, but the foliage will not stand bright sunlight, and without good foliage cyclamen growing is impossible. The young stock recently potted from flats will be making good leaves now and in about a month should be ready for potting into 3½-inch. Do not make the mistake, though, of overpotting any of the plants. They do far better with small shifts so the roots have always command of the compost. From now on there will be danger of attacks from thrips and occasional fumigations will be necessary to keep these insects in check. Keep up a regular temperature with ample supplies of fresh air and remove the shading entirely in dull weather. When repotting cyclamens always finish the soil so that the corms are just buried, but not deeply. They push up to the surface in a short time and are then in the best and most natural position. Bulbs potted entirely out of the soil dry up too rapidly and are not as healthy.

Cupressus Lusitanica.

Many who are not familiar with this species by name will recognize it in the "cypress" that has been more or less in evidence the last few years among coniferous plants imported from Europe. It is quite a different plant to the biotas and Lawson's cypress that are more popular at Christmas and would, if exploited, make a popular market plant, as it could be sold cheaply and would last well in living rooms, as well as, or better than, the araucarias. A retailer with his own glass should secure young plants yearly and keep a stock of it in various sizes. It is not strictly hardy, but, except in the most adverse weather, would thrive under a lath shading outdoors, the pots plunged in leaves or fiber to prevent the roots drying out too rapidly. C. macrocarpa, the Monterey cypress, is sometimes grown in a similar way, but C. Lusitanica is of a better habit and dwarfer. Some of the varieties are very glaucous and it

is known in the trade as the cedar of Goa.

Marguerites.

When the bedding is over and the window boxes all planted the stock of marguerites will probably not be large and the plants that are left will be poor. When early flowering plants are needed it does not do to depend upon stock from outdoor plants and a few of these rough looking subjects may have the old flowers removed, be cut back a little and placed in a moderately close but cool frame, spraying the heads regularly. As soon as new growth starts give the plants a shift or set them out in a soil bed and little side shoots about an inch long will soon be produced. Root these in a similar frame in small pots and pot each singly when rooted, first pinching out the point of each. Pot firmly in soil not too rich and in a few weeks these will form nice little hard stock in 2-inch pots, ready, as soon as the weather gets cool, to be repotted into 5-inch and grown on for early flowering. There is a great difference in stock of this kind and plants produced by rooting soft green cuttings from plants that have made a strong growth outdoors, though these are quite good enough for window box use and bedding. The one thing needful in the culture of marguerites is to keep them free of insects and a constantly cool and airy atmosphere is the most likely method to secure this. Heat is fatal to them, so is a harsh, dry atmosphere, especially to the yellow flowering sorts, but these can be just as easily grown as the white if properly treated.

SACO, ME.—Geo. L. Mahoney & Co. report a great scarcity of outdoor flowers for Memorial day.

WELLINGTON, O.—T. G. Yale writes: "Trade the best this spring we have ever enjoyed. Memorial day trade was about 50 per cent better than usual. As one customer remarked, 'There is another grave to be decorated this year.' We had the goods and now we have the cash for them."

THE RETAIL TRADE

THE Home Journal (Canadian), in its issue for June, has a long and interesting article on The Bride's Bouquet, illustrated with pretty cuts of bridal bouquets from photographs from John H. Dunlop of Toronto, and bunches of various flowers from photographs taken at the Dale Estate, Brampton, Ont.

A Jewish Home Wedding Decoration.

SEE SUPPLEMENT WITH THIS ISSUE.

A Jewish temple set up in the home of one of the contracting parties to a wedding is a not unusual order for the florist in Jewish districts and scope for very tasteful and telling decorations often results. Southern smilax is one of the most useful of decorative subjects for this class of work, good for draping walls and pillars, lattice work, electroliers and other things it is desirable to hide or adorn. It is sufficiently cheap to be used in quantity in large rooms, halls and corridors, lasts well and is cleanly in use, does not drop all over the carpets and furniture and is not highly inflammable and therefore dangerous to use like some of the dried products. These have been the cause of many fires at weddings and similar functions and for this reason insurance companies have in some cases prohibited their use in buildings where they hold a risk.

The walls and festooning are usually the first consideration and when these are done the temporary, improvised temple or pulpit is put in and the florist has to think out a scheme for decorating it with palms, foliage and flowering plants. These decorations may be very elaborate or very simple according to the wishes of the patrons but in either case good palms are one of the first considerations. If there is to be a lighting scheme carried out this should all be arranged beforehand and the palms so placed that they are lit well and show to the best advantage. A large well feathered specimen of Kentia Forsteriana on either side, if the lighting scheme allows, or one large one in the center if this seems more suitable, will form a good setting for the other plants which will, of course, vary with the season of the year.

Rambler roses are fine for such work. They may be used in so many different forms, are always attractive without being stiff or garish in color, while small plants may be used to stand up from other subjects with excellent effect. In all cases it is best to get away from the stiff bank idea. Break up the outline both ways. Do not let the line on the floor be semicircular or straight but let it fall back in places into small bays and again jut out in others, displaying in the latter case some fine specimen plant kept higher than its surroundings to break up the monotony. There are many plants that can be grown for this latter purpose. Some of the finer, narrow-leaved crotons are excellent if well grown and colored. Humea elegans is also fine for the purpose and an old and half forgotten species of fuchsia, F. gracilis, is one of the most suitable subjects in cultivation, its pretty drooping flowers on the loosely pyramid shaped plants having a graceful and pretty pose not possessed by many more popular plants. There is ample room, in short, for individuality along these lines and florists who grow their own plants should keep such things in mind when propagating.

PILLOW MADE OF ROSES AND LILY OF THE VALLEY WITH LETTERING.

Memorial Day Around the New York Stores.

Unlike Christmas and Easter, the volume of business connected with Memorial day cannot be adequately estimated by visiting the stores on Fifth avenue, Broadway or the other great thoroughfares. While it is true that the retailers of these streets have their share of the business, to see real activity, the scene changes to the vicinity of the great cemeteries. The business of this year exceeded that of last and possibly that of any preceding year. Originally dedicated to the memory of the soldiers, its observance has always been popular with what Lincoln called the "plain people," and whom, he added, "God must have loved because he made so many of them." As the years have passed the spirit of the observance has imbued all classes, and in this great city, this year, the touching spectacle was witnessed of a body of unemployed men going to the potter's field on Hart's island to decorate the graves of nameless dead. Their offerings were humble, but they added something to the grand total of human kindness and commercial activity as well.

Though an enormous quantity of cut flowers, largely of the less expensive varieties, was sold and used, a very noteworthy feature of the trade was in plant sales. One dealer, located near Woodlawn cemetery, which is in the Bronx, and in which many wealthy people are lot owners, said that he had never before had such a demand for geraniums. This may be partly accounted for by the fact that Saturday, Sunday and Monday were all exceptionally fine days and many observe Saturday as a half-holiday. The time was so long and conditions so favorable that general advantage was taken of them. It may also be noted that while many wealthy people are absent from the city, provisions are

made for the care and decoration of their lots, and in such cases the tendency seems to be toward plants rather than cut flowers. Returning to the geraniums, we may say that never before have we been so impressed with their popularity and usefulness as by recent visits to the great cemeteries of this city. At Woodlawn we noticed many large pans of lilies as well as pot roses and the tendency seems to be decidedly toward that class of decoration.

Viewed in a wider range, it is appropriate to remark on the great impetus which the observance of Memorial day has given to the nursery and plant as well as the cut flower trade. The snowballs, the hardy rhododendrons, spiræas, deutzias and other flowering plants and shrubs have been well utilized and their beauty and appropriateness must be universally acknowledged. While the observance in any form is a beautiful act, the foresight which prompts seasonable planting is certainly commendable. The monuments located in the parks and squares throughout the city, which have from time to time been erected to honor the heroes of the Revolutionary, the Mexican and civil wars, were very generally decorated.

In these decorations, which were generally executed on orders from the various societies which exist for the purpose of perpetuating the memories of heroic deeds, many garlands of laurel and other green were noted. At Grant's tomb, on the Riverside drive, an immense crowd collected on Monday afternoon, Gov. Hughes delivering an address. It was estimated that at least 100,000 people lined the drive to cheer the veterans and militia as they passed in review. The sarcophagus in which rest the remains of Gen. and Mrs. Grant was covered with elaborate floral tributes from all parts of the country. Among the most noteworthy were those from Lafayette and Grant posts, G. A. R. of New York, Meade post of Philadelphia and the Loyal Legion. The Chinese minister sent a wreath of immortelles. Another point of interest on Riverside drive was the Soldiers' and Sailors' monument, also finely decorated. Gov. Hughes, in his address at Grant's tomb, touched a keynote when he said: "The act of a little girl in strewing with flowers the graves of the dead heroes is more significant than the noisy demonstrations of the Fourth of July."

At Stapleton, Staten Island, after exercises held by the local camp of Spanish war veterans, practically the whole population of the town repaired to the water's edge. Twenty-five children were rowed out on the bay in boats, from which they scattered flowers on the waves in memory of the sailors who lost their lives in war. Again referring to the commercial features of the day, we visited several stores located near Woodlawn cemetery. At that point Samuel Cockburn & Sons, who have also a branch at Kensico cemetery, were doing an immense business both in plants and cut flowers. At the store of Peter Roemer in the same locality there was similar evidence of activity. The Friedman store had a heavy demand for cut flowers. Among the noted cemeteries of the country Greenwood of Brooklyn is pre-eminent. Around and near it are many florists whose chief business is derived from the care of lots and the sale of plants and cut flowers for cemetery decoration. Notable among these is the veteran John Condon, who for years has done a large business. On Memorial day Mr. Condon said that business was better than last year. He attributed this to some extent to the splendid weather. His greenhouses and office being located directly opposite the cemetery entrance, his judgment is undoubtedly sound. The firm of Jas. Weir, Jr., & Son have also a very attractive conservatory and do a flourishing business at Greenwood. They were well satisfied with the business. Henry Weber, Jr., another leading dealer, said that everything had sold well.

BROKEN COLUMN BY A. EHMAN & SONS, NEW YORK.
Carnations and White Sweet Peas.

A Broken Column.

The broken column seems as popular as ever for funerals and the fine piece illustrated herewith was made by A. Ehman & Sons, 2112 Broadway, New York, for the funeral of the late H. H. Rogers. The shaft was made entirely of Enchantress carnations, with a garland of white sweet peas, pink and white carnations being used in the base.

Winter Flowering Sweet Peas.

ED. AMERICAN FLORIST:—

What kinds of sweet peas are best to grow for winter flowering? Should they be planted in solid beds or raised benches? How much room should they have and when should we sow to have them in bloom for Christmas?

M.

Every seed house carries the winter flowering strain of sweet peas, and while there is quite a number of them, the Christmas Pink and Florence Denzer or Christmas White are the best colors. I should certainly recommend raised benches; plant three to five plants to one string in rows about 8x12 inches apart. The end of August or during the early part of September will be about right for Christmas blooming. If ready sow right into benches; otherwise use 3½-inch pots and plant out afterwards; a carnation house temperature will do, even a little less, with all the sunlight possible. Seven feet of head room, rather heavy soil with but little manure are advisable.

B.

"WE greatly apreciate your supplements."—(MRS.) LAURA A. GRILLS, Hagerstown, Ind.

FLORISTS' FERNS.

Nephrolepis Whitmani.

There is little doubt that Nephrolepis Whitmani is the best of all the crested or plumose nephrolepis sports for market. As may be seen by the illustration it is a fine looking plant when well grown, and, in spite of the fierce competition from new varieties from both sides of the Atlantic, it has maintained its position and there is little doubt that if a vote were taken of all the principal market plant growers as to which is the best of all the sports for their purpose N. Whitmani would come out well ahead of all its competitors.

The fronds are heavily plumose but not so heavily as to cause the stems to give way when grown into large plants. It has a splendid, graceful habit and the color is good. It is a free grower from the smallest size up and a good breeder, throwing out runners in great abundance as soon as planted on the stock benches. Then, like the old Boston, it stands well and even thrives in dry, steam heated rooms, and has every attribute of a good market plant, satisfactory both to grower and customer. Commercial growers say, "Why look further when we have so good a fern already?" and, while doubtless they will always be ready to give a trial to anything that appears likely to prove better, they will look upon N. Whitmani as a tried and proved kind, and, as a moneymaker, the best of them all to date.

COMMERCIAL.

Cultural Notes in Season.

In the early summer many growers become especially interested in the subject of ferns, from the fact that after the stock of spring plants has been sold out there is often some space that may well be occupied with small ferns for ferneries. This makes an additional crop for those growers so located that they can find a ready market for small ferns and thus helps considerably in bringing up the profits from a given space. But the growers who use ferns for a catch crop do not want to bother with raising them from spores, and therefore depend upon getting the young stock from one of the large firms making a specialty of this class of plants, the young stock being delivered in flats of about 200 plants each, and in a fit condition to pot.

These flats of small ferns are usually offered between May 1 and July 1 and thus may be had in time to make satisfactory stock for the following fall and winter. The young plants only need careful potting and watering and protection from sun and wind until they are established, and they will soon grow away and be in condition to endure an abundance of light and air. Among those not familiar with ferns in general the question arises as to what sorts are best for such a purpose. Too long a list of species and varieties is liable to cause more trouble to the grower than a brief list of good and satisfactory species, six or eight good sorts being quite enough for most growers. A good proportion of Aspidium Tsussimense, one of the best of all dwarf ferns for table use, some Cyrtomium falcatum, frequently, though incorrectly, called holly fern, and several of the dwarf and crested forms of pteris (for example P. cretica Mayii, P. Wilsonii, P. serrulata cristata, P. cretica albo-lineata and P. adiantoides). These are all reasonably hardy and pleasing kinds for ferneries and the chief result that should be aimed at in growing them is to produce short stemmed, stocky plants with plenty of roots and hard foliage; in short, to produce the kind of plants that the retail dealer may safely use and recommend.

Maidenhair fern is sometimes demanded for filling ferneries, but is not very satisfactory for this purpose, and frequently dies within a week in the hot and gas laden atmosphere that prevails in many dwellings. Adiantum cuneatum is the species most used when the order calls for maidenhair, though short and bushy plants of A. pubescens are also useful at times. After the worst of the summer heat is past, or in September, the small ferns are better without shade on the glass, the stronger light producing a short growth of hardy fronds that are calculated to endure the trying conditions of the modern dwelling with a reasonable degree of success. The pan of the average fernery is very shallow, and for this reason it is not advisable to grow the ferns in too large pots, for the larger the pot the more of the best roots will be cut or torn off in the effort to get a sufficient number of plants into the pan. Many of the ferns grown for this use are in 3-inch pots, and for a large fernery this size is a good one, but in filling the smaller sized ferneries it is much more convenient to use plants from 2½-inch pots, and if the crop of ferns is not prepared too early in the season the latter size pot will be found quite satisfactory.

The florist with a show house for the benefit of his retail trade sometimes finds a few of the less common ferns an advantage, using them in display arrangements for the sake of novelty, and also frequently finding a customer for some of these out of the ordinary plants. The bird's nest fern, Asplenium indus avis, is one of the species that always attracts attention, its singular form and large light green simple fronds being very attractive. This fern has been grown and offered more extensively in the trade during the past few years, but is still far from being common. A few hanging baskets filled with Adiantum dolabriforme may also be made a feature, this odd and very pretty species being well adapted for the basket method of culture. Its long and slender fronds, with a single row of pinnæ on each side of the midrib, are very light and graceful, and also have the peculiarity of being proliferous at the apex, thus reproducing itself and soon forming a mass of airy foliage. Such a specimen may be used to advantage in a window decoration, and also find a customer who desires something out of the ordinary run of plants. Cibotium (dicksonia) Schiedei still finds many admirers, and justly so, for few ferns are more ornamental, but it must always be taken into consideration that this fern is a strong-growing species and requires much space in which to properly develop its fronds; conse-

NEPHROLEPIS WHITMANI.

THE MODERN SWEET PEA.—(About Two-Thirds Natural Size.)

Burpee's Primrose Spencer, Primrose. Apple Blossom, Rose and Blush.

quently it cannot profitably be sold at bargain prices. The best method to follow with this fern is to purchase strong young plants from 3 or 4-inch pots in the spring and as they grow quite rapidly to pot on and space them out in a fairly light and airy house. Such stock should make good plants in 7 or 8-inch pots in readiness for Christmas sales, and the species may be safely recommended as a house plant.

W. H. TAPLIN.

The Modern Sweet Pea.—III.

THE SWEET PEA SOCIETIES.

Just as I was beginning this article a letter came from New York announcing a movement to organize an American National Sweet Pea Society. I judge that Harry Bunyard is a prime mover in it, and it states that Harry Turner, president of the New York Florists' Club, will lend his influence to the project, and that its June meeting would be set aside for a sweet pea exhibition. Here in California we shall be glad to join also, and give it cordial recognition. I hail this as a very auspicious sign, and no doubt the friendly hand will be promptly extended by the very prosperous national society in Great Britain. We can again repeat that "the sweet pea has a keel that was meant to seek all shores, it has wings that were meant to fly across all continents; it has a standard that is friendly to all nations, and it has a fragrance like the universal gospel." There has been considerable complaint among the English fanciers that the American grown seed of the Spencer novelties gave them back a different color. We shall need a good American committee in this matter. And I, for one, shall try to keep California in close touch with the men on the other side, and shall sacredly guard the most friendly comity.

POPULARITY IN AMERICA.

But my first anxiety is not to keep pace with the van of English enthusiasts, so much as to repopularize this flower in our own country. We want to restore confidence everywhere in the growing of it. I shall watch for reports, to hear that the common rank and file of people with small gardens are again having good average success. I never could quite satisfy myself why it was that 10 years ago the sweet pea went back on us. But I felt sure it would recover from this backset. As I diagnosed it then, no matter whether it was blight, red spider or aphis, the indication was that of a debilitated condition somewhere in the constitution of the general seed stock. All the apparent symptoms pointed that way. I consider that parasites and fungus attack a plant only when the constitution and vitality of the plant is too weak to resist them. It was a great trial to some of us 10 years ago to surrender just when our enthusiasm was at its height. The rest cure was all I could see then. But I hope now the time of mourning is past. The Spencer type now looks as if the sweet pea had taken a new lease of life. We must remember that growing from seed is quite a different proposition from making cuttings from the strongest stock of a given flower.

Nature has its metes and bounds, and this fact is shown especially in seed. But I don't want to begin again to talk about sweet pea diseases. I take it we are once more ready to enjoy the flowers. I want to invite at least enough correspondence to post me from different sections and states, including Canada. I don't want to impose upon people by writing from California, where we have splendid conditions for growing the sweet pea. Messrs. Burpee and Morse will testify that I have heretofore written impartially. And now I am anxious that every 5-cent package of sweet peas shall give such a reward that it will lure the purchaser to grow the best sorts. The immense stock of this seed, grown chiefly in California, is bought up each year, so that evidently people are still planting it. I noticed that John Eckford, the successor of Henry Eckford in England, now grows 60 acres of this seed. Rowntree Bros., Clarence Park, St. Albans, claim to be the next largest growers. But it is venturesome for us to try to grow sweet pea novelties directly imported from England, except in localities where the conditions are peculiarly favorable. It is quite time enough after they have passed through the best trial grounds here to see whether we want them.

MORE ABOUT VARIETIES.

Now I am reminded that an AMERICAN FLORIST article reaches the trade, and I do not want to say things that will seem gratuitous. I do not expect the florist to grow Henry Eckford. It is not yet up to commercial requirements. Neither is Helen Lewis. Miss Willmott is the commercial orange. As for white, I do expect to see Burpee's White Spencer in the florists' windows this year. Still Dorothy Eckford will probably predominate on account of the relative cost of seed.

As for lavender, I shall be interested to see whether the florists take kindly to Mrs. George Higginson, a field of which I saw last summer in remarkably uniform color. It is not strictly lavender, and does not run into the reddish tinge. It just borders on the light blue enough to be quite distinct from the whole Countess of Radnor line. The English fanciers are looking to Mrs. Charles Foster as the coming lavender, and which has the Spencer form. Probably the florists here have planted Lady Grisel Hamilton again. Frank Dolby is another worthy competitor. I should think Phenomenal would be a fine florist's variety.

Probably Hon. Mrs. Kenyon is the florist's variety in primrose, but it seems to me Burpee's Primrose Spencer ought, in spite of the very limited stock of seed, to be seen in a good many florists' windows. In speaking of the practical pink for florist's use I will refer to Morse's list of 50 varieties that represent the largest sales. They show the comparative popularity of the sorts in order, as based upon the season's contract orders, beginning with King Edward VII with 9,000 pounds, down through the list. The orders represent 100 of the largest dealers. It seems curious to me that the old Katherine Tracy should still stand first among the pink sorts. It stands sixth in the general list, while Lovely stands fifteenth, and Prima Donna twenty-first. Evidently the florists are buying Katherine Tracy for pink. This shows hard headed practicality. But, strange to say, the old Emily Henderson holds the second place in this list of actual orders, Dorothy Eckford coming third. And I should have said that Gladys Unwin stands next to Katherine Tracy among the pinks. It momentarily dampens the ardor of a fancier to read this list based on actual sales, and still, taking the first 10, with one or two exceptions they are excellent sorts. Here are the first 10 having the largest sale, according to Mr. Morse: King Edward VII, Emily Henderson, Dorothy Eckford, Lady Grisel Hamilton, Hon. Mrs. Kenyon, Katherine Tracy, Miss Willmott, Gladys Unwin and Salopian. We can pretty safely say those are florist varieties.

So with greenhouse varieties. I saw Zvolanek's stock being grown at the Morse ranches. They are all old familiar types, and grown outdoors would seem inferior. I do not doubt they have some sort of selected quality which responds to greenhouse forcing. And now I ought to bring the subject up to date by just noticing the list of new sweet peas for 1909, as compiled by Walter P. Wright for the sweet pea number of the Gardener. They represent 18 firms and specialists. There are 71 such novelties. Henry Eckford used to give us six annually. I think we shall get a tight rein on this novelty business before long.

W. T. HUTCHINS.

The Yellow Callas.

Probably some of the worst disappointed men in the United States and other countries were they who paid from $5 to $10 per bulb for Calla Elliottiana and other yellow callas only to watch them for several years getting smaller and weaker, or at least not getting any larger, though they had, apparently, the best of care. The plant came with a flourish and many bought it who could do nothing with it beyond flowering it once a year. The bulbs were often placed in strong heat and the consequence was a weak growth that in its decay did not return anything to the tubers and these remained stationary.

Calla Elliottiana.

Then some one got the idea of raising seedlings and keeping them cooler; also giving them a natural rest during the winter and from that time on the yellow callas were a success. Seeds sown in late fall or early spring in boxes in a cool house push up strongly the first year but the roots are so brittle and easily damaged that they are not easy to transplant with safety; consequently it is better to leave them in the pans or seed flats for a year and pot them singly when they commence growing the second time. The proper position for them is in a house shaded from bright sunlight, kept moist and at a night temperature of not over 50°. Here the growth will be vigorous and free and flowers will appear in plenty while, in early autumn, the plant will show signs of having done its duty and go to rest for the winter. This is the annual routine followed by the writer for several years with Calla Elliottiana and although at first it looked like wasted money—as indeed it was, seedlings being so easily raised—yet the plant when treated this way made up for all its former shortcomings.

Calla Elliottiana flowers well outside and we have seen the advice given that it should be grown for winter forcing. While admitting it would be a beautiful plant if it could be used that way it appears to us that it would be going directly against the natural habit of the plant, unless, by some artificial method of retarding, the bulbs could be kept at rest until late fall. The habit appears to be quite deciduous and more like that of the Italian spotted leaved calla than the common calla or arum lily. This latter can, and is, frequently kept growing more or less all through the year but it is doubtful if Calla Elliottiana could be so treated. Tests could be made with a few bulbs in a refrigerating chamber kept just around the freezing point and these may be satisfactory. But it would probably mean raising new bulbs every year as retarded roots of any kind lose much of their vitality, or at least have not the recuperative power of naturally grown plants.

Calla Elliottiana or Richardia Elliottiana is a native of South Africa and with C. Pentlandii, a more recent species, and probably others more or less distinct, likes a sandy, open compost in which its fleshy roots can run freely. A liberal addition of well dried cow manure should be made and during the active growing and flowering period liquid manure should be freely applied. Seed bearing is rather distressing to the plants and it is seldom that bulbs allowed to mature a crop of seeds do very well the next season. The seed takes quite a long time to ripen, often not being fit to gather before September, and is best sown at once or at least not kept any great length of time. C. Pentlandii is larger than C. Elliottiana and, in its best varieties, bears flowers of a deeper color, though seedlings vary a little in this respect.

A pretty calla, said to be a hybrid, raised by Joseph Tailby, of Wellesley, Mass., is called Mrs. Theo. Roosevelt. This is nearly hardy and comes true from seed. The flowers are not of the pure deep yellow of C. Pentlandii and C. Elliottiana being midway between its parents, the old Calla (or Richardia) albo maculata and C. Elliottiana and having the purple blotch in the center characteristic of the former. It is a prolific variety and a good grower, attaining a height of four feet or more outside.

COMMERCIAL.

Frank Bros., Beardstown, Ill.

The substantial looking greenhouses and offices shown in the accompanying illustrations are the property of Frank Bros., Beardstown, Ill., who do a good local retail trade from the products grown therein. Frank Bros. purchased the greenhouses in 1901 from Frank Burdenshaw, but they have been rebuilt and added to since then and now comprise a very neat and compact little plant of about 10,000 feet of glass. Both cut flowers and plants are grown for the home trade entirely, nothing being sold at wholesale and everything is in the best possible condition.

SAN FRANCISCO, CALIF.—Henry Kalcarnia, a florist living at 863 Wisconsin street, was brutally beaten May 23 by a gang of roughs, who held him up at Wisconsin and Twenty-fourth streets. Kalcarnia had no money to satisfy the rapacity of his assailants, so they beat him up cruelly with a gas pipe, injuring his head so severely that his skull may be fractured. He is unable to give the police any clew to the identity of his assailants.

THE ROSE.

WHITE KILLARNEY is now offered in the English trade papers. It has made a good impression over there.

A GROWER of experience gives it as his opinion that Richmond like Killarney, should not be pruned as hard as Bride and Bridesmaid.

Among the Teas.

A BUSY TIME FOR THE GROWER.

The grower who looks after his stock has very little spare time on his hands now. With good flowers being cut from the stock he wants to throw out and with other good stock which he wishes to cut down for holding over he is often in a quandary as to what to do about it. One thing is certain. The young stock must not be neglected. If the benches are not ready for it or likely to be very shortly then there is nothing for it but to repot the plants. They must not be left to starve in small pots and the sooner he makes up his mind which he is going to do the better for the stock and for his pocketbook. If the cut flowers are bringing a good price that will reimburse him for the time and expense of potting and the extra labor of planting from the larger pots then that is the thing to do, for an extra shift is an advantage rather than otherwise to the young plants owing to the better root system they will have when planted.

ESTABLISHMENT OF FRANK BROS., BEARDSTOWN, ILL.

PRUNING.

It is different, however, with the stock that is to be held over. If this is to be satisfactory the plants must have time after being cut back and the benches top dressed to get a good head of growth on before the summer is over and unless this work is started pretty soon they will not have this time. A week or two may do no harm, and it is often inconvenient to do it until after most of the planting is finished, but the earlier in reason, after June is out, the better. Even while cutting, the benches may be run slightly drier and feeding stopped without hurting the quality of the few remaining flowers much and the plants will be getting into better condition for the pruning. We have often noticed men pruning roses that would be better employed chopping sod. They are looking anywhere rather than at what they are doing, and cut off all the stems alike, weak, strong or medium, old or young. A good pruner needs to be a quick thinker and must decide on the instant what he will do with every shoot as he comes to it. He will come across little weak shoots that can never produce a good growth and these should be cut right out. Next possibly a fine, well-ripened stem that if tied down will break along its entire length and push up fine flowering shoots in fall. This he will leave as long as possible consistent with keeping a more or less regular bench. Then there are medium-sized shoots of which two to four good eyes may be left, young sappy shoots to be cut out altogether and old, hard, black wood that can not be expected to do any good if left. To think of this as he goes along and yet make good time with his work will find a man enough to do without talking baseball to his friend on the other side of the bench.

RECENTLY PLANTED STOCK.

After planting and watering in, the young stock needs careful watering at the root. By giving each a little for a few days the old ball of soil does not get a chance to dry out and the surrounding soil is kept fairly dry so that the roots can enter it freely. It is easy to so manipulate the hose with the fingers that every part of the young plants are moistened, yet very little water is spilled on the surface of the soil and this is the ideal way of carrying out the work. Unfortunately but few of the helpers in some places will take the trouble to learn how to do this, consequently the soil around the young plants soon gets into a very wet condition and though the young plants may appear all right they will not be rooting as freely or making so good a growth as when the air reaches the roots through a dry surface soil. As they begin to grow go over them carefully once a week and remove any flower buds that form, taking sufficient of the wood with the buds to insure a good shoot starting. And when going over them for disbudding note any old leaves that may have a little mildew or spider upon them, or little worthless shoots and cut them away entirely. The more leaves a plant can carry the better for the roots, provided each leaf is getting its full share of light and air, but this little scrubby growth has no influence on the roots to speak of and will certainly be no good to the plant.

COMMERCIAL.

Rose Eynsford Beauty.

This lovely single rose is a dwarf sport from the beautiful American Pillar, which created so much interest when shown last year, says the Garden. Like those of its prototype, the flowers of Eynsford Beauty are large and of a charming pink hue, this color fading to creamy white at the bases of the petals. In addition they are deliciously fragrant. The blooms are said to last a very long time when open, a trait that will render it a most valuable variety for decorative purposes. At present the plants show no signs of reverting back to American Pillar, and the blooms are freely borne in clusters. This sport has been secured by H. Cannell & Sons of Swanley, Kent, who exhibited American Pillar so finely last year. Eynsford Beauty was shown by them at the Royal Horticultural Society's meeting May 4, when the plants created a considerable amount of interest.

ESTABLISHMENT OF FRANK BROS., BEARDSTOWN, ILL.

Prospect Park, Brooklyn, N. Y.

Of the many noteworthy features of Prospect park, Brooklyn, N. Y., none, at the present, attract more attention than the rhododendrons. The miles of winding drives and walks, over hill and dale, throughout this park, make it particularly well adapted to the cultivation and display of rhododendrons and other flowering plants and shrubs. The superintendent of this park is a man who combines the attainments of civil engineer, architect and landscape gardener. By his wide range of knowledge he has formulated a system that blends the component features of a great park system into one harmonious vista. We have mentioned the rhododendrons because in the minds of many bloom is an essential at this season of the year, and nothing has yet been found that at the beginning of June makes so largely for beautiful effects as they. Here we find borders that are a mass of flowers, the plants being graded from gigantic specimens in the background down to sizes next the walks or drives that would not be out of place in the store of a retail florist.

Another very attractive feature is the mountain laurel in variety. In the selection of flowering shrubbery these varieties have been frequently overlooked, but along tree lined drives and walks their merits are well worthy the attention of both professional and amateur gardeners. A noteworthy feature is the flower garden. Beginning in the spring with a grand display of tulips this garden throughout the season is an object of admiration to the thousands who frequent the park.

We have written "the" flower garden, but there are two of them. The main garden is in a beautiful natural situation, and skilful work has greatly enhanced its beauty. Originally intended, we should judge, for a formal garden, at present there are just enough formal features to preserve artistic merit, while the natural has been so carefully preserved that, taken as a whole, it is an entrancing spot. In this garden there is a fine statue of Lincoln, which, if not superior to the St. Gaudens statue at Chicago, is by many considered equal to any reproduction in existence, of the form and features of the great liberator. There are also statues of other men noted in literature and art.

In this garden and about its entrances and borders the rhododendrons have been planted with fine discrimination as to flowering effects. A grand display of tulips, which was a great attraction to visitors in their season, is now being rapidly superseded by the summer bedding plants. There is a pavilion in this garden, and on permission of the authorities various organizations from time to time convene. The garden looks out on a lake into which a peninsula, now verdant with beautiful trees and shrubs, juts out. The other garden is what Gardener Alex. Hogg and his assistant affectionately term grandmother's garden. As this term implies, it is devoted exclusively to the cultivation of the hardy old-fashioned flowers. Around its borders a splendid collection of iris, in many varieties, now blooms. There are sweet williams, columbines, hollyhocks, Canterbury bells and many other plants coming on. Even the live-forevers and southern woods have been remembered, and the real old-fashioned pinks are in abundance.

Notes on Peonies.

The following notes on peonies are from the pen of R. B. Whytte of Ottawa, Ont., and are reprinted from the third annual report of the Horticultural Societies of Ontario. They refer to varieties grown in England, but many will be recognized as well known in the American trade:

When in England last June I visited all the exhibitions and nurseries available, where peonies were shown, and made careful notes of those that I considered the most desirable varieties that were new to me. Among the many hundreds of good sorts in cultivation there are doubtless many as good, and possibly better, than those noted, but any grower wishing to add to his collection can rely on the desirableness of any of the varieties in the annexed list. At the Royal Botanic Society's show at Regent's Park, June 17, the first one at which peonies were staged in any quantity, the large exhibitors were Kelway & Son, Barr & Son, T. S. Ware and Paul & Son, all of whom had very large collections. I visited Barr & Son, at Surbiton, and carefully examined their extensive collection. Peonies were one of the main features of the Royal Horticultural Society's show, and at the Franco-British flower show. At the Royal Horticultural Society's gardens at Wisley there were a few varieties in the large collection in fine condition at the end of June. In the following list those that I considered the very finest, in color, shape and size I have marked **; those marked *, while they appeared to me not quite up to this standard, are still very fine sorts and well worthy of a place in any collection. In the light of my increased experience the list of 12 best sorts given last year might be revised and improved by the substitution of four of the best of the varieties in the annexed list: Baroness Schroeder, Miss Salway, Ella Christine Kelway, Bunch of Perfume, taking the place of Marie Lemoine, Queen Victoria, Lady Leonora Bramwell, and Duke of Wellington.

Royal Botanic Society's Show.

**Bunch of Perfume.—Rich deep pink, large, very double.—P.
Dorchester.—Blush, very fine.
Duchess of Teck.—Creamy white to pink, guard petals, large, very fine.
Ella Christine Kelway.—Extra fine pink, very large, flat, large petals.—P.
Miss Salway.—White, primrose guard, large, extra fine center.—P.
Lady Ester Smith.—White guards, cream center, a few large petals in center.
Mr. Manning.—Dark crimson, very large, fine form.
Lady Ardilaun.—White, slightly tipped carmine, very large and very double.
Bonaparte.—Dark crimson, very large, fluffy petals.
Humei Carnea.—Pink guard, white center, large, very fine.—P.
Delicatissima.—Blush, very large and double.—P.
Mad. Calot.—Creamy blush, deep shade, very fine.—P.
La Tulipe.—White, faintly tipped carmine, very fine shape.—P.
Albert Crousse.—Clear pink, very large, very double.
*Sainfoin.—Rich deep pink, semi-double.
Hallam.—Crimson, large and very double
Limosel.—Deep pink, very double, good size.—P.
Baroness Schroeder.—Pale pink to cream, large guards, medium size.—P.
Portia.—As Festiva Maxima, with a shade of blush.
Sir M. Singe.—Dark crimson, ball shape, very fine.
Countess of Clancarty.—Very fine, pure white.—P.
Gloire de Patrie.—Very large, deep pink.—P.
Lord Rosebery.—Fine shade of pink.
Leonie.—Pale pink, medium size, fine shape and color.—P.
Triomphe de Paris.—Creamy with a shade of pink, large guard.
Alba Superba.—White, cream center, good size.

Barr's Nursery, June 19.

Marshall McMahon.—Light crimson, large.
Eugene Verdier.—Pale pink, semi-double, shaded salmon.
Washington.—Silvery pink.
Snowball.—White, large guards.
Silenus.—Silvery pink.
Gen. Cavaignac.—Rosy silvery pink, shaded clear pink.—P.
Charles Verdier.—Dark rosy.
Duchess of Nemours.—White to faint primrose.—P.
Mistress Parkinson.—Lavender pink, fine form.
Duchess of Sutherland.—Pink, good color and shape, medium size.—P.

Kew Gardens, June 19.

L'Elegance.—Rosy pink, good.—P.
Lady Carrington.—Blush to white.—P.
Mons. Dupont.—Very light La Rosiere, very fine.

Royal Horticultural Society, June 23.

**Sir Geo. White.—Very large, rosy pink.
Rev. W. Wilks.—Very large pink.
Lady Romilly.—As Mad. D'Hour, rather deeper pink.
Marie d'Hour.—Rosy pink, very fine.
Mons. Roussilon.—Very large, dark blush.—P.
*Lottie Collins.—Very large, light crimson, semi-double, yellow anthers.
Lord Cromer.—Large rosy pink.
Duke of Devonshire.—Light crimson, yellow centers.

Franco-British Exhibition, June 24.

**Mons. C. Leveque.—Extra fine blush.—P. carmine.
Enchantress.—Very pale blush.
Claude Loraine.—Extra large pink, good form.
Edmond About.—Extra fine pink, streaked fine.
*De Candolle.—Rosy pink, fine shape.
Felix Crousse.—Dark rosy red, ball shaped.

Wisley, June 27.

Md. D'Hour.—Very large, free bloomer, flesh color, tipped carmine.
M. Jules Elie.—Silvery pink, very large.
La Rosiere.—White, yellow center, semi-double, remarkably free bloomer, very sweet.
*Marie.—Very pale blush.
Gismonda.—Pink, very large.
Mad. Hutin.—Very double pink, center nearly white, ball shape.

Revised List of Twelve Best.

**Viscount de Fonceville.—Very large pink, fine form.
Mde. D. Galhau.—Very large pink, extra
Festiva Maxima.—Very fine, white-tipped carmine.
Floral Treasure.—Soft rose, fragrant, free bloomer.
Asa Gray.—Salmon pink, very large, free bloomer.
Claire Dubois.—Light rose, very large, free bloomer.
Ella Christine Kelway.—Extra fine pink, very large, flat, large petals, sweet.
Baroness Schroeder.—Pale pink to cream, large guards, perfumed.
Miss Salway.—White, primrose guards, large, very fine center, perfumed.
Bunch of Perfume.—Rich deep pink, large, very double, perfumed.
Rubra Superba.—Purplish crimson, very free bloomer.

Duty on Artificial Wreaths.

The board of general appraisers June 3 reversed Collector Loeb in his assessment of a 50-cent duty on wreaths composed of artificial flowers. The flowers were mounted on wire frames. Collector Loeb held that the articles should pay duty as "artificial flowers" with a tax of 50 per cent.

Benjamin Stearns & Co., the importers, set up the claim that the goods should be allowed to enter at 45 per cent under the provision in the tariff law for articles composed in chief value of manufactures of metal. General Appraiser McClelland, who writes the decision for the board, says that the board is satisfied that the merchandise under protest is not artificial flowers within the meaning of the Dingley tariff. Under the circumstances, the importers' protest is sustained.

MILFORD, CONN.—Comstock & Hungerford had charge of the decorations on the green for Memorial day.

Ban on Flowers at June Commencements.

Chicago Florists Making Concerted Effort to Have the Embargo Placed Upon the Trade by Ex-Superintendent Cooley Removed.

The Campaign.

At the next open meeting of the board of education, June 16, a committee made up of wholesale and retail florists will appear before the board and present arguments to show that the rule prohibiting flowers at June commencements in the public schools put in force some three years ago by ex-Superintendent Cooley should be abolished. THE AMERICAN FLORIST, which for the past 25 years has always been the leader in every movement looking to the welfare and advancement of the florist trade, has started an agitation with the view of having this ban removed and herewith presents to its readers an article which appeared in The Chicago Tribune of June 4, together with the views of some of the leading men in the trade. The Tribune says:

"At the next meeting of the board of education, wholesale and retail florists will try to have rescinded the rule established by former Superintendent Cooley three years ago prohibiting the giving of flowers to graduates at June commencements.

"The florists declare they are losing $100,000 a year because of the edict, which they denounce as unconstitutional and tending to curtail the freedom of school children and their parents. 'The parents of many graduates cannot afford to send them flowers,' said President Schneider, 'and these children would be embarrassed and hurt if their schoolmates received presents and flowers. The school board always has made every effort possible to put all children on an equal footing. Some of the schools where sewing is taught are going so far as to have the girl graduates make their own dresses for the June exercises so that there will be no jealousy.'

"In answer to this argument, a representative of THE AMERICAN FLORIST declared the florists would agree to furnish from 100,000 to 200,000 peonies or other flowers for the commencements free of charge if the order were rescinded. 'We only want to sell the flowers to the parents and friends of those children who can afford to pay for them,' he said. 'If the order is rescinded, we will furnish flowers for all those children who are not provided for. This can be left in the hands of the teachers, who can give us the names of those to whom flowers have not been sent.'"

Comments of the Trade.

IMMEDIATE AND AGGRESSIVE ACTION.

In less than three weeks our public schools will close for another term and the question now uppermost in the minds of our local florists is: Will the board of education continue to enforce their edict made some years ago barring the presentation of flowers at the annual commencements of our schools? As long as Superintendent Cooley was the one-man power of our board of education it seemed useless to make another attempt to persuade the board to rescind this rule. At present, however, there appears to be some hope of having the board make the much desired change. It is known that in the present board there are at least three or four members who are with us in this matter.

That this subject is of the greatest importance to the trade is of course admitted. Immediate and aggressive action must be taken if any results are to be obtained this season and all of us, whether members of this committee or not, should work to this end. Let each and every one of us write to the board of education urging them to change the rule made by our former board, stating the reasons why such a change would be not alone for the benefit of our craft—indeed, I should advise not to lay too much stress on this point for fear of marring our case by appearing too selfish—but for the best interest of the pupils and the public at large.

THE BENTHEY-COATSWORTH CO.
(Per F. F. Benthey.)

FLOWERS AS AN EDUCATOR.

Regarding the giving of flowers at the commencement exercises in our schools, would state that we are heartily in favor of this practice, not only because it means advancing our particular business, but because we believe that the receiving and admiring of flowers by children tends to betterment. No person, be he child or man, can view a work of art or beautiful flowers without being the better for it; and, while in many cases the fact that one child receives flowers and one does not, works a hardship, at the same time this same hardship is expressed by one child being better dressed at the commencement exercises than the other, and the board of education of Chicago in discriminating against the florist is no more right than it would be in discriminating against the dry-goods store.

E. H. HUNT,
(Per C. M. Dickinson, Mgr.)

THE SURVIVAL OF THE FITTEST.

The position taken by Ex-Superintendent Cooley and the then board of education is untenable and smacks much of socialism. The education of children is to fit them for the practical life they will lead when they finish their schooling, and they will then find that everyone must stand on his own footing. There is no such thing as equality in this life as the old rule of the survival of the fittest holds good today as it always has. You may count on us.

A. L. RANDALL CO.

EARNEST SUPPORT OF PETER REINBERG.

Entirely apart from what this means to the flower trade I firmly believe that the school board has taken away much of the beauty and happiness from the commencement exercises. These occasions occur but once in the life of a child and a gift of flowers at such a time goes straight to the heart of every little one. Your movement has my earnest support and hearty co-operation.

PETER REINBERG.

FLORISTS AS TAX PAYERS.

The school law now in force should be abolished, absolutely rescinded; why should the board of education pass laws that are discriminating to the florist? Do not the florists of Chicago contribute their mite towards the city and school taxes, from whence comes the money to pay these officers, teachers, to maintain and erect new school buildings and the like? Surely the florists of Cook county are each year called upon for a goodly sum, when you stop to consider the enormous amount of money that is invested in greenhouses inside of Cook county. Therefore I believe the florists should enjoy some of the patronage that is denied them by the board of education. Are not the florists entitled to just the same privileges as the milliners, hatters, shoe dealers and clothiers? If it is a saving that they are after, why not get busy with the textbook publishers and insist upon Chicago getting its books as cheap as Indiana towns?

Regarding free flowers for pupils whose parents are in needy circumstance all that is necessary is a word from the teachers and I as well as other florists, would freely respond.

J. A. BUDLONG.

SHOULD RETAIN A LAWYER.

The florists will some day wake up and find they must do like dealers in all other lines, bond themselves together and act in concert. The trade is losing a large amount of money every June; one-half of this amount would go to the jobber, the grower would get all of this less our commission and the retailer would get the balance. Just think, what a lot of shoes, dry goods, and other merchandise these profits would buy. Taking your clipping as a basis, let us get up a fund of say one-half of one percent of both the wholesale and retail dealers gross year's business; get the proper lawyers and see if this law or ruling is sound. In this case it requires action, not talk. Action as one man, not a bunch, or a tug of war.

KENNICOTT BROS. CO.

LIMIT THE BOUQUETS.

In regard to flowers for the common grades, we do not think there were many used but for the high school grades a large quantity were bought. The estimate of $100,000 per year is altogether too high. We should say $10,000 would be a fair estimate if the matter could be estimated at all. There are still quantities of flowers sent to the homes of the children. We think if the number of bouquets allowed given to any one child was limited to a certain number it would tend to do away with the old-time troubles when some of the children had from half a dozen to a dozen bouquets sent them.

BASSETT & WASHBURN.

DEAMUD WILL ASSIST.

In reply to yours regarding flowers in schools, we shall be very glad to assist on any committee with the view of getting the order rescinded prohibiting their use at the commencement exercises in June. In regard to our donating any flowers, this we personally could not do but we could promise that our growers would authorize us to give a certain percentage of their stock when we could show them that by so doing they could get much better prices for the balance. J. B. DEAMUD CO.

YOURS FOR THE FIGHT.

You cannot quote us too strongly as being in favor of this movement. That the florists have been discriminated against goes without saying and we are glad to note that THE FLORIST has come to the front as a champion of the cause. If you can put this through the trade will arise and call you blessed. Yours for the fight, ZECH & MANN.

GEORGE REINBERG APPROVES.

Regarding the rule established by former Superintendent Cooley prohibiting the giving of flowers to graduates at schools, would say that we are very much in favor of the movement started by THE FLORIST to have this rule rescinded and will do all in our power to help the good work along.

GEO. REINBERG.

NEAR TO EVERY MAN'S HEART.

The movement which has been started by THE FLORIST is near to the heart of every man in the trade and you may use my name in any way you see fit to advance the good cause.

JOHN KRUCHTEN.

SCHEDULES of the June exhibition of hardy flowers, roses and fruit and the autumn show of chrysanthemums, held June 15 and November 4-6, respectively, under the auspices of the Tarrytown, N. Y., Horticultural Society, are out and may be obtained of the secretary, E. W. Neubrand, Tarrytown, N. Y.

THE third annual report of the Horticultural Societies of Ontario is a book of 124 pages, containing much interesting matter relating to the work of these societies in the province and many illustrations that are suggestive of good work, besides papers and other reprint matter that well repays perusal.

HELP of a certain kind is still plentiful but there is a scarcity of skilled men of good character.

POWDERED alum is recommended as a cure for slugs indoors or out and, it is said, will do no harm to plants unless used in unnecessarily large quantities.

THERE are indications that some of the single stemmed orchids of the vanda and phalænopsis types will be increasingly grown for cutting in the future.

No better proof of the widespread interest in horticultural pursuits can be needed than the greatly increased space given them in newspapers, magazines and lay publications generally.

We have received from Wm. Murphy, superintendent of the trade exhibition at the convention of the Society of American Florists, to be held at Cincinnati, O., August 17-20, his instructions as to shipping freight and the rules relating to the management. These will be given full attention in our next issue.

THE great show of the Royal Horticultural Society, held in the Temple gardens, London, is said to have eclipsed all former shows in magnificence. Awards of merit were given by the floral committee to: Roses Coquina, Margaret, Mrs. Taft, Jessie and American Pillar; Carnation Carola; Begonia Pink Pearl; Iris Sir Dighton Probyn and Sir Trevor Lawrence; Ficus australis variegata; Ptychoraphis Siebertiana and Marguerite White Perfection.

IT has always been the opinion of the AMERICAN FLORIST that school authorities had no more right to dictate what flowers should be distributed at school commencements than they have the right to pass on the shoes, ribbons, muslins or hair ornaments of the pupils. In this direction, and on behalf of the cut flower trade in and about Chicago, our representatives are trying to do some effective work against edicts of this kind. Florists in other cities who are under this ban should make a similar organized effort, and write us.

Glass.

Prices on greenhouse glass are beginning to stiffen up a little and promise to go higher in the next 30 days as, while some of the factories will run all summer, a larger number will shut down July 1.

Sweet Pea Society Proposed.

A national sweet pea society for America is suggested by Harry A. Bunyard, who has issued a circular letter regarding this proposition. Full particulars can be had by addressing him at 342 W. Fourteenth street, New York.

National Council of Horticulture.

The ninth installment of the press service of the National Council of Horticulture contains articles on "Hardy Chrysanthemums," "Tea Roses," "Dogwoods" and "Brussels Sprouts." Seedsmen, nurserymen and florists should induce the editors of their local papers to send for and use these excellent articles which are sent free on application to J. H. Burdett, 1720 W. 104th place, Chicago. They help to stir up a liking for gardening in the vicinity, and thus help trade with amateur growers.

The Horticultural Society of New York.

FALL EXHIBITION SCHEDULE.

Secretary Geo. V. Nash, of the Horticultural Society of New York, is now sending out the preliminary schedule of prizes and classes for the fall exhibition to be held in the American museum of natural history in that city. The schedule as it now stands includes good prizes for chrysanthemums in plants and cut flowers, roses, carnations, orchids, foliage plants, fruits and vegetables and the society's certificate for a meritorious new plant not yet in commerce. The society has been liberal in the number and amount of the cash premiums, among which we note $25 and $15 for three specimen bush chrysanthemums and the same amounts for three standards, $20 and $10 for 50 blooms, $35 and $20 for 100 American Beauty roses, and good prizes for other flowers and groups of plants. In the sweepstakes for 100 carnations the society's silver medal is offered and diplomas are offered for decorations and floral pieces.

The success of last year's exhibition is still fresh in the mind of exhibitors and the general public, and we hope that this success will be repeated. Growers at a distance can ship their stock and this will have every attention from the management, and as the competition is not limited to members of the society there should be quite a number of these exhibits. All who are interested should write for this preliminary schedule and particulars to Geo. V. Nash, secretary of the Horticultural Society, Botanical Gardens, Bronx Park, New York.

Important Foreign Exhibitions.

July 2.—National rose show, National Rose Society, Royal Botanic Gardens, Regents Park, London, N. W., Eng. E. Mawley, secretary, Rosebank, Berkhamsted, Herts, Eng.

July 6-7.—Holland House show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 23.—National sweet pea show, National Sweet Pea Society, R. H. S. Hall, Vincent square, Westminster, Eng. C. H. Curtis, secretary, 2 Adelaide road, Brentford, London, W., Eng.

September 8-9.—Royal Caledonian Horticultural Society, Centenary show, Waverly Market, Edinburgh, Scot. John McKenzie, secretary, 23 Rutland square, Edinburgh, Scotland.

Meetings Next Week.

Baltimore, Md., June 14, 8 p. m.—Gardeners' Club of Baltimore, Florists' Exchange hall, St. Paul and Franklin streets.

Boston, Mass., June 15.—Gardeners' and Florists' Club of Boston, Horticultural Hall.

Cleveland, O., June 14, 7:30 p. m.—Cleveland Florists' Club, Progress hall, 2610 Detroit street.

Lake Geneva, Wis., June 19, 8 p. m.—Lake Geneva Gardeners' and Foremen's Association, News building.

New Orleans, La., June 13, 2 p. m.—Gardeners' Mutual Protective Association, 118 Exchange alley.

New Orleans, La., June 17, 8 p. m.—New Orleans Horticultural Society, Kolb's hall, 127 St. Charles avenue.

Newport, R. I., June 16.—Newport Horticultural Society.

New York, June 14, 7:30 p. m.—New York Florists' Club, Grand Opera House building.

Pasadena, Calif., June 18, 8 p. m.—Pasadena Gardeners' Association, G. A. R. hall, East Colorado street.

Philadelphia, Pa., June 15, 8 p. m.—Florists' Club of Philadelphia, Horticultural hall, Broad street, below Locust.

Rochester, N. Y., June 14, 7:30 p. m.—Commercial Florists' Association of Rochester, 24 Stone street.

Salt Lake City, Utah, June 15.—Salt Lake Florists' Club, Huddart Floral Co., 114 East Second South street.

San Francisco, Calif., June 19.—Pacific Coast Horticultural Society.

Scranton, Pa., June 18, 7:30 p. m.—Scranton Florists' Club, Guernsey building.

Seattle, Wash., June 15.—Seattle Florists' Association, Chamber of Commerce, Second avenue and Columbia street.
Springfield, O., June 14.—Springfield Florists' Club, office of the Good & Reese Co.
St. Paul, Minn., June 15, 8 p. m.—Minnesota State Florists' Association, 510 Snelling avenue, north.
Toronto, Ont., June 15, 8 p. m.—Toronto Gardeners' and Florists' Association, St. George's hall, Elm street.

OBITUARY.

Charles Zuber.

Charles Zuber, the youngest son of Victor Zuber of the firm of Victor Zuber & Sons, growers, of Whitestone, N. Y., died in a Brooklyn hospital on June 4. The cause of his death was spinal meningitis. He was ill for less than one week and was removed to the hospital in the hope that more constant medical attendance might save his life but all was unavailing. He was in the twenty-third year of his life and a young man popular among his acquaintances. The funeral was held on June 6, interment being in the Catholic cemetery at Flushing. He is survived by a father and stepmother, four brothers and four sisters.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.
For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.
Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

Situation Wanted—By experienced seedsman, either in house or on road.
Address Key 833, care American Florist.

Situation Wanted—Grower of roses, carnations 'mums and general stock; designer and decorator. Address
Key 825, care American Florist.

Situation Wanted—Good grower and propagator; well up in all greenhouse work; strictly sober; good references. Address
Key 823, care American Florist.

Situation Wanted—Gardener Scotchman, age 32, desires position as head on private estate; best of references from England and Scotland. GARDENER, 137 W. Girard Ave., Philadelphia, Pa.

Situation Wanted—As gardener in private place; am experienced in general greenhouse work, lawns and vegetables; married; best references. Address Key 836, care American Florist.

Situation Wanted—By experienced grower of carnations 'mums etc.; has had general greenhouse experience; reliable and sober; commercial place preferred. Address
Key 817, care American Florist.

Situation Wanted—By experienced grower of roses, carnations, violets, chrysanthemums, decorative and bedding plants; middle aged, single, sober; state wages. Address
Key 822, care American Florist.

Situation Wanted—By sober, young man; 24; experienced as rose carnation and 'mum grower; capable of taking charge of section or commercial place; kindly state wages. Address
Key 824, care American Florist.

Situation Wanted—By practical all 'round man; inside or out; private or commercial; eight years in last position; married; English; 25 years' experience on private and commercial places. Address Key 821, care American Florist.

Situation Wanted—Gardener, 20 years' experience; German, single, capable of managing and taking care of private place or grounds; am an all around handy man with tools; good Christian, honest, sober and industrious; best of reference.
Key 832, care American Florist.

Cincinnati.

OUTDOOR STOCK PLENTIFUL.

With the thermometer hovering about 90° and copious rains, outdoor stock of all kinds is being rushed to the market in great quantities. This, combined with an enormous crop of carnations which struck town last Wednesday, makes it easy to figure the results. Roses are getting smaller every day and in some cases it is pretty hard to tell whether they have any foliage owing to the mildew which is curling the leaves; in fact roses have not been as badly affected with mildew for a good many years as they are at present. The carnation crop has arrived and to give an idea of the quantities received, Will Murphy says it kept him busy between sales last Friday until four o'clock in the afternoon to get his flowers in jars. Spanish iris is here in quantity and the wholesale men are making large shipments to northern markets it being an utter impossibility to sell one-third of the stock coming in. George & Allan are cutting some of the finest lily of the valley of their career which brings top market prices. Sweet peas are in oversupply and peonies are a glut. Ferns are not quite as plentiful but this no doubt can be attributed to the heavy rains, the pickers not being able to make any headway. Other green goods are in good supply, with the exception of smilax, which has to be cut in 3-foot lengths to fill orders.

NOTES.

Mrs. Mary Thomas on upper Vine street has the sympathy of the trade in the loss of her mother who died last week of pneumonia at the age of 72 years. The funeral took place on Saturday and nearly every florist in the city sent a floral tribute to the house of mourning.

The next regular monthly meeting of the Florists' Society will be held June 12 in the club rooms, Jabez Elliott Flower Market. At this meeting many matters of importance will be brought up and it is the wish of the officers that as many members as possible attend.

Martin Reukauf was in the city on Friday arranging for space for exhibiting the Bayersdorfer wares next August at the convention. He had his eye on one particular spot in the exhibition hall which covers 1,000 feet.

Geo. Corbett, as usual, is first in the market with outdoor sweet peas and they are fine, the variety being Mont Blanc. S.

Albany, N. Y.

The June meeting of the Florists' Club was held at the establishment of Patrick Hyde, where a considerable number of the members congregated. The special committee, composed of F. A. Danker, Louis Menand, F. Henkes, and William Kurth reported that it had carried out instructions delivered at the previous meeting to decorate the soldiers' monument in the Rural cemetery. The committee on Decoration day placed upon the monument a large wreath of magnolias and Harrisi lilies with a ribbon inscribed with the name of the club. One new member was proposed and will be voted upon at the next meeting. Members of the club reported on the business incident to Decoration day. All seemed to be satisfied with the character and volume of the demand for flowers. The supply was equal to the demand. The next meeting of the club will be held at the home of President Fred Goldring, Slingerlands, on the evening of July 1.

Insect Eating Carnations.

ED. AMERICAN FLORIST:—

I have a worm eating my carnations. It is a borer and enters at the root of the plant, boring up through the center, eating out the heart and coming out at top of ground. The plant dies just above the ground, leaving the top green. It is a round worm and bores a round hole. So far it has hurt only the plants in the open ground, with a few exceptions. It is on my rooted cuttings principally. I send you a specimen in an envelope. He is a hard customer to reach as he is on the inside of plant.

Kansas. G.

As near as we can make out from the specimen to hand and the description given, the insect that is causing the trouble is the common stalk maggot or weevil. We have not heard of this pest being troublesome with carnations before; the fact of its boring up through the stem makes it a difficult problem to overcome. We would advise close watching of any affected plants, removing any that the insect has destroyed. A little soft coal soot sprinkled lightly around the base of the plants may be of some benefit in checking these worms. Wood ashes are also beneficial in checking them. It would do no harm to experiment a little with both of these articles as a means of overcoming the pest.

C. W. JOHNSON.

Injury to Field Carnations.

ED. AMERICAN FLORIST:—

Please inform me what I can do with cutworms, at least that is what I think ails my plants. My field carnations are looking fine, only where there seems to be something at work at the roots; they begin to turn light and die. I was afraid for a while it was a disease until my sweet peas began to do the same. I pulled them up and there seems to be no root to them. Now if it should be a cutworm what can I use to kill the insect without hurting my plants?

Kansas. J. R. G.

The trouble here is, without a doubt, caused by cut worms. These are usually very troublesome when carnations are planted in freshly plowed sod ground and they are difficult to eradicate for the first and sometimes the second season. We remember having the same trouble with a batch of Jubilee when it was a novelty, it being so bad that the plants were put out one week, lifted and potted again within 10 days and housed as quickly as the space could be made ready for them in order to save what we could of the plants. We would not hesitate to advise the same measures in this case if the conditions are bad enough to warrant it. By scratching a little in the soil around the plants early in the day a great many of the worms can be caught and in this way "J. R. G." may possibly overcome them.

C. W. JOHNSON.

St. Louis.

BUSINESS DULL.

Weddings, school exercises and summer garden theater parties together with funeral work, form the outlet for the many flowers now coming into this market. Trade in general is very dull. Many outdoor flowers crowd the market. Carnations, roses, peonies and jasmines are plentiful. The wholesalers as well as the retailers are looking for customers and inducements have to be given to start anything moving. Vacations, picnics and fishing parties are now talked of and within the next 10 days the dull season will have fairly started.

NOTES.

On Sunday, June 6, the Missouri Botanical Garden opened its doors from 2 p. m. till sunset, according to the will of Henry Shaw, donor of the garden. The new attraction was the newly completed library and herbarium building. A variety of roses and yuccas, also a bed of Baby Rambler roses, are exceptionally beautiful, also the collection of exotic orchids, insect eating plants, sensitive plants and ferns. In one of the houses is a very large vanilla. The attendance on Sunday was 25,000.

Bentzen Floral Co. is erecting a greenhouse and store room a few doors south of the present location where a fine stock of decorative and flowering plants will be on hand. This company has built up a fine trade and the present location is entirely inadequate for its rapidly growing business.

We regret to announce the death of Mrs. Werner, wife of Alfred Werner, of Clayton. The sympathy of the florists is extended to his brother Hugo, of the firm of Werner Bros. Special floral designs were sent to the funeral.

Will Young, president of the Florists' Club, celebrated his fifty-second birthday with his family at the villa at Delmar garden. Will is looking well and many years of happiness it is hoped by his friends will be his lot.

Two young girls went to the store of H. G. Berning and ordered some flowers, saying they were wanted by Charles B. Bleekert. They were arrested, as inquiries over the 'phone proved them to be frauds.

Geo. Waldbart reports the loss of his delivery horse, also a valuable dog, both dropping dead. W. F.

Chicago.

CARNATIONS HARD TO MOVE.

A diversity of opinion has prevailed on the market the past week as to conditions and it is rather hard to weld the various opinions into a coherent whole as to just what those conditions are. There are a great many poor flowers on the market that are offering for little or nothing and for these the demand has been practically nil. Thrips and mildew have played havoc with the roses, especially American Beauty, Bride and Bridesmaid, and while some especially fancy stock in these varieties was noticed and moved freely at good prices, the majority of them were poor and hard to move at any price. Richmond, Killarney, Kaiserin and Perle were of better quality and in good demand while prices held fairly firm.

Carnations are in great profusion and almost uniformly of good quality but the supply has been so far in excess of the demand that it has been almost a case of "make your own prices." Early in the week one commission house got rid of a large surplus at five cents a bunch but a conservative estimate of the market value is about 50 cents per 100 in 1,000 lots. Even at this price the retailers are not over anxious to purchase and the departed street fakir is missed as an outlet.

PEONIES AND SWEET PEAS.

Peonies, peonies everywhere; this was the condition which prevailed on election day until four o'clock in the afternoon. All sorts and conditions there were at prices ranging all the way from five to 75 cents a dozen. White had the best call. Sweet peas are plentiful, the Spencer type predominating, and are of uniformly good quality though there have been several complaints as to their shipping quality, which may in a measure be accounted for by the hot weather the first part of the week.

JUNE WEDDINGS.

June weddings, as usual, are responsible for a number of large shipments, and almost every order contains lily of the valley, smilax and asparagus. There is quite a demand for outdoor flowers and the supply is adequate. Easter lilies are also moving satisfactorily.

THE FLORISTS' CLUB.

There were 21 members present at the meeting of the Florists' Club on the evening of June 4 at the Union restaurant with genial President Asmus in the chair. After the reading of the minutes by Secretary L. H. Winterson two new names were proposed for active membership: M. D. Neely, 144 Milwaukee avenue, and F. C. Morris of Hinsdale, Ill. The session then settled down to the business of the evening, which was the third reading, and final action on the proposed new by-laws. Chairman A. T. Hey read these and after some minor amendments they were unanimously adopted. The most radical changes in the new rules are the combining of the offices of recording and financial secretaries into the one office of secretary, and making the board of trustees three in number instead of five. Accordingly nominations were in order for these offices. For secretary L. H. Winterson and Frank Johnson were placed in nomination and for trustees the present five, including Leonard Kill, H. N. Bruns, J. F. Klimmer, August Poehlmann and Charles Fiske, together with F. F. Benthey and E. C. Amling, were nominated. The matter of the annual florists' picnic was referred to the good of the club committee, which was to work in conjunction with the sports and pastimes committee. This picnic committee was authorized to appoint such other members as should be deemed necessary.

NOTES.

George Sykes, local manager for the Lord & Burnham Co., has just returned from a brief visit to Detroit, where he obtained the contract from the city for a propagating house to be erected in Belle Isle park. Mr. Sykes gives an interesting account of his recent trip to New York where he closed a large contract with J. B. Duke, the tobacco magnate, a full report of which will be found in the Allied Trade notes on page 1050 of this issue.

J. E. Watts and wife of Meridian, Miss., were in the city this week and were much impressed with this market. Mrs. Watts says that trade with them has been very good and the only fault she has to find is that they are so far away from the Chicago market that the flowers do not always reach them in as good condition as they would like.

Bob Northam of George Reinberg's left on Wednesday for Iron River where he will put in two weeks dallying with the festive trout. Bob knows all the best streams in the Iron River country, having spent 15 years of his life there before becoming identified with the flower business.

Joe Foerster of the J. B. Deamud Co. is up to his old tricks again. In prize competition at the Mountain alleys last week he walked away with nearly all the prizes. The Florists' Club needs him in its lineup and with John Zech to lead off and Joe as anchor would make a clean sweep.

The business outlook is so good to Peter Reinberg that he has decided, according to Leonard Kill, to build four additional houses, each 27½x300 feet, making eight in all. This will add 66,000 square feet of glass to the range, which is already the largest in this country.

In the prize bowling competition on Friday night Ed Schultz, with a large handicap, carried off first prize. John Zech, the only scratch man, took second money, while Henry Kruchten finished in third place.

Bassett & Washburn are receiving a great many of the large southern ferns but claim that the excessive transportation charges take all of the profit out of the business.

The Geo. Wittbold Co. has just received a large shipment of bay trees and kentias. Louis Wittbold reports that the outdoor trade is keeping all hands very busy.

Harry Seeley of the A. L. Randall Co., joined the noble army of Benedicts June 2. Miss Evelyn Long of Wilmette was the fair bride. They have our best wishes.

A. Rennie, local representative of A. H. Hews & Co., was the guest of John Degnan of Winterson's Seed Store at the bowlingfest on June 4 at Bensingers.

W. A. Burpee, of Philadelphia, with his son David, made a tour of the city parks on Wednesday as a guest of Carl Cropp, secretary of Vaughan's Seed Store.

Bedding trade is lively, according to Louis Winterson. There is no surplus of geraniums in bloom and the new King Humbert canna is scarce.

A. Lange had a record breaking day on Monday when he made up 11 shower bouquets and 41 bridal bouquets.

C. M. Dickinson is building a new home at Park Ridge.

Visitors—B. F. Vandervate, Galena; Mrs. Frances Spickerman of the Sandwich Greenhouse, Sandwich; F. L. Tornquist, Benton Harbor, Mich.; J. E. Watts and wife, Meridian, Miss.; A. C. Rott, Joliet.

PLANTS FOR SCHOOL PUPILS.

Under direction of the Civic League and through the generosity of J. F. Ammann every pupil in the public schools in this city was presented with a rose plant. The plants were given the children with the object of forwarding the Civic League movement. There are over 1,000 pupils in the schools and the present is an expensive one to the generous donor. The children were requested to plant and care for the roses during the vacation months. The plants are of the variety Mrs. Potter Palmer. Mr. Ammann has a new automobile.

TRADE NOT ENCOURAGING.

The business of the past week was not very encouraging. Though the marriage license bureau sends out rosy reports of prospective business, it does not appear that the wave of matrimony has yet thrown up any profitable salvage to the florists from their own viewpoint; the majority of people who get married in these later days have the job done as cheaply as possible. The weather throughout the week was dull and gloomy with much rain, and not at all conducive to good business. American Beauty roses have held up very well, but other stocks have steadily declined, so far as prices are concerned. The weather has not been particularly favorable for a great influx of flowers, but there has been more than enough to supply all demands. Peonies are now coming in large quantities, but, excepting Festiva Maxima and other varieties of kindred worth, they are cheap and slow. Tea roses can be bought for almost any price, say $1 per 100, up or down, generally down. To summarize the situation, everything is cheap and slow and we seem to be at the begining of the end of the season.

NOTES.

On a recent visit to the John Scott estate we found much activity in the line of cannas, coleus and other bedding plants, for which this range has in the past been noted, as well as for its palms, ferns and gardenias. The range is now managed by David McKenzie, who was foreman previous to the death of Mr. Scott. George Scott, a brother of the late proprietor, is also an active man in the business. Mrs. John Scott and her baby daughter are doing well.

The Lord & Burnham Co. has just closed a contract with J. B. Duke, a captain of the tobacco industry, for new greenhouses, the approximate cost of which will be $70,000. This will be the second large range which this company has erected for Mr. Duke and when completed his estate at Somerville, N. J., will have more glass than any other private place in America.

The next monthly meeting of the Florists' Club will be held on Monday night, June 14. We note the announcement in a contemporary that it will be held on June 12, but at this writing Secretary Young has not advised us of any change of date. There will be an exhibition of peonies and outdoor roses.

There are many expressions of sympathy for A. Le Moult, the well-known retailer. Death, the grim reaper, has taken from him a daughter, a young woman of many fine qualities of mind and heart. Sympathy is also extended to Joseph S. Fenrich and wife, Mrs. Fenrich and Miss Le Moult being sisters.

Creditors of the various Fleischman companies, according to the New York Times, are by no means satisfied with Joseph Fleischman's assertion that the books relating to the Fleischman Baths are lost and purpose having all the directors of this concern examined.

Though it is the "good old summer time," Ford Bros. are receiving daily shipments of very fine Enchantress carnations from Henry Hession's Flatbush range.

*Remember the Florists' Club outing July 1. and make no arrangments that will interfere with your being present.

Horticultural Society of New York.

SUMMER EXHIBITION.

The summer exhibition of the above named society was held in the Museum building, Bronx Park, June 5-6. Much credit is due Secretary Geo. V. Nash for his untiring efforts to make the exhibition a success. The display of flowers of hardy and herbaceous plants was very fine and reflected much credit on the exhibitors. Noteworthy among these were Bobbink & Atkins, Rutherford, N. J.; F. R. Pierson, Tarrytown, N. Y.; George H. Peterson, Fair Lawn, N. J.; Blue Hills Nurseries, South Braintree, Mass.; and Palisades Nurseries, Sparkhill, N. Y. There were also a number of fine exhibits from private estates, noteworthy being those of E. H. Weatherbee, Mamaroneck, N. Y.; Theodore Havemeyer, Hempstead, N. Y., and Miss Potter, Ossining, N. Y.

The number of exhibitors of peonies was not as large as had been expected, and F. R. Pierson, of Tarrytown, N. Y., and Geo. H. Peterson of Fair Lawn, N. J., divided the honors in this class. In the exhibits of flowers of hardy herbaceous plants the Blue Hills Nurseries, South Braintree, Mass., made a fine exhibit, and staged it so that anybody could understand the botanical and common names of the plants. A printed card was placed with each variety giving all necessary information. We commend this to commercial exhibitors in general. If an exhibition is opened to the public, it is entitled to some benefit, a fact that is sometimes forgotten.

The special exhibits of orchids of Lager & Hurrell, Summit, N. J.; the Julius Roehrs Co., Rutherford, N. J., and Joseph A. Manda, West Orange, N. J., were all very fine. Two new varieties, exhibited by Manda, are particularly worthy of note. These were a new variety of Cattleya Mossiæ and Lælio-Cattleya Dominiana Splendens, neither of which were ever before exhibited. They are remarkably beautiful flowers and are sure to attract the attention of orchid fanciers. In addition to what has already been mentioned, the Blue Hills Nurseries had an exhibit of 96 species and varieties of hardy conifers. In the peony collections of Pierson and Peterson, the following varieties were noteworthy: Festiva Maxima, Marie Stuart, Achille, Gen. Bertrand, Mme. Breon and Candidissima. An attractive feature was the Scotch eglantine, exhibited by James Wood, Mt. Kisco, N. Y. Other interesting and attractive features were the irises in variety of Bobbink & Atkins and E. H. Weatherbee. The awards were as follows:

Peonies.

Three white varieties, six flowers of each, F. R. Pierson, first.

Three light pink varieties, six flowers of each, Geo. H. Peterson, first.

Three rose varieties, six flowers of each, Geo. H. Peterson, first.

Three crimson varieties, six flowers of each, F. R. Pierson, first.

Collection of singles, three flowers of each kind, F. R. Pierson, first.

Largest and finest collection, not less than six flowers of each variety, F. R. Pierson, first; Geo. H. Peterson, second.

Miscellaneous.

Flowering shrubs and trees, E. H. Weatherbee, first; F. R. Pierson, second.

Hardy rhododendrons and azaleas, or either, F. R. Pierson, first; Theo. Havemeyer, second.

Collection of hardy herbaceous plants, Blue Hills Nurseries, first; Palisades Nurseries, second.

Collection of irises, Theo. Havemeyer, first; Bobbink & Atkins, second.

Special Prizes.

Lager & Hurrell, orchids.....$10

Julius Roehrs Co., orchids..... 5

Miss Pottes roses, also cultural certificate for Gladiolus Peach Blossom... 3

Joseph A. Manda, certificate for Cattleya Mossiæ and bronze medal for Lælio-Cattleya Dominiana Splendens.

Julius Roehrs Co., certificate for Cattleya gigas Sanderiana.

Buffalo.

MEMORIAL DAY TRADE GOOD.

The weather of the past week has been ideal. Trade was all that could be expected for Memorial day coming as it did on Sunday and Monday being observed as a holiday gave us three days' business. The sale of plants at greenhouses was good, also bunches of cut flowers. The usual number of express wagons were well filled by donations from the public schools and other friends of the G. A. R. Weddings were plentiful last week but not very large. S. A. Anderson had the bouquets for one on May 31 which was very elaborate, lily of the valley, orchids, Killarney roses and white lilac being the flowers used. Greenhouse men are now working overtime with the filling of veranda boxes, lawn vases and other garden work. The unfavorable weather up to May 29 retarded the work and now every one wants their work done, consequently it is hard to get an audience with anyone in a greenhouse. Outdoor stock has been short in supply so far but indoor flowers with the exception of Bride and Bridesmaid roses are still good. Sweet peas are showing the effects of warm weather.

NOTES.

Jos. Streit, foreman for S. A. Anderson at his greenhouses, and wife, sail July 3 for two months in Germany. S. A. Anderson and family go to Wanakah on the lake shore for the summer. W. J. Palmer will likely summer at Lancaster while J. H. Rebstock will be found at Crystal Beach. W. F. Kasting and family will be in Erie, Pa. The Scott boys will in all probability divide their time between Corfu and this city. Jerry Brookins and wife of Orchard Park are visiting in Pittsburg, Pa.

One of S. A. Anderson's horses that was delivering plants becamse unmanageable on Saturday and attempted to run away. Wm. Bartlett, one of the employes, in jumping from the wagon broke his leg in two places and is now in the hospital. From the reports he was fortunate in not being killed.

Everyone being busy last week President Slattery did not call the regular meeting of the Florists' Club, so look out for a good one next month when picnic arrangements will be made.

Charles Keitsch of Main street and Earl place is very busy, dividing his time between greenhouse and store, but will be on hand for Cincinnati.

R. E. Boettger of Eggertsville is sending in a fine lot of Harrisii lilies which Kasting & Co. are handling.

J. Benson Stafford has an automobile for delivery purposes.

Visitors: E. A. Penn, Summerdale.

CAR STRIKE HINDERS TRADE.

This city last week was in the throes of a street car strike which interfered considerably with business, as while there was about 20 per cent of the cars moving through the day the service was entirely shut down after 7 p. m. at night. We are glad to say that the trouble is now over and cars are running regularly. There was some demand for commencements and weddings but outside of this and the regular funeral demand there was little doing. Flowers of all kinds in season are very plentiful and cheap, in fact almost everything is at buyers' prices. Eastern roses, American Beauty, Kaiserin, Carnot and Killarney are seen in good shape and bring about 25 per cent more than the local stock, which is deteriorating fast on account of the hot weather. Outdoor sweet peas now control the market; they are fine at low prices and sell as well as anything. Peonies came on with a rush and the market has been flooded with flowers that graded high but on account of the light demand brought little money. Carnations are hard to move and prices ruled low. Lily of the valley moves fairly well and the quality is fine. Easter lilies are also placed in competition with the already overstocked market and find some few buyers. The quality of the blooms is A1. There is a wealth of cattleyas, all the growers seeming to have crops in; the flowers are wonderfully large and beautiful; $5 per dozen is the asking price but 100 choice blooms can be bought for $25.

FLORISTS' CLUB MEETING.

The June meeting of the Florists' Club was much interfered with by the street car strike, no cars running after 7 p. m., keeping the members home. Edwin Lonsdale's paper on the "Decoration of the Lawn" will be read by him at the July meeting. The trustees and council of the Pennsylvania Horticultural Society at a meeting last week determined to bring the matter of the sale of the hall and grounds before the society at its July meeting. The hall as a property is not paying and interest money is running behind; in fact, there is not enough left after expenses of maintenance are provided for, to pay the taxes, and the trustees seeing no light ahead now want permission to accept an offer of near $600,000 which it is understood has been made for the property. The ground with the old building on it was given to the society by Miss Schaffer as a memorial to her brother, who had been for some years its president. It was without incumbrance and was to be used for its exhibitions and by letting out for endowments and like purposes it was hoped considerable funds would be provided for use of the society. Unfortunately the building was soon destroyed by fire. As the society could not mortgage the property and had only about $25,000 insurance money they were in a dilemma as to how to erect a new hall. Finally a syndicate leased the ground for 30 years and erected the present building, the society to have free use of same whenever required for its meetings and exhibitions in consideration of which it turned into the building fund the $25,000 insurance money. At the termination of the lease the building was to revert to the society as it was expected that by this time the bonds which were to be paid off from time to time would all have been retired. The situation is now, however, that after some 13 years none of the bonds have been paid off, the enterprise is not a paying venture, the syndicate want the property sold and the bonds redeemed out of the proceeds. This is all right from their standpoint but will not the gift of Miss Schaffer, the memorial to her brother, be endangered? Whatever this ground was worth then and what it is worth now should not be jeopardized in the least degree. The syndicate went into a business venture and cannot expect the society to be responsible in any way if its enterprise is not successful. The members of the society should immediately get together and see to it that, if any change is made, their rights are protected to the fullest extent.

NOTES.

A fire on June 1 in the building in which the store of H. H. Battles is located caused a hasty removal of all the goods into his other store, the Century Flower Shop, where business was carried on for the day. The damage was principally from water, which injured the plastering of the room and the woodwork.

The Leo Niessen Co. reports a good business for the season as at the low prices the tendency is to move stock in large lots. American Beauty roses, cattleyas and lily of the valley are seen in quantities.

Wm. McKissick & Bros. are receiving fine American Beauty, Carnots and Kaiserin roses, eastern stock, for which they have quite a demand.

K.

Pittsburg.

TRADE QUIET.

The market has just about settled down again in the same old rut of a few weeks ago, quantities of flowers and very little business. Quite a number of the retailers have been kept very busy the past week with weddings that help break the monotony somewhat. One can see some very fine stock in the commission houses in the way of American Beauty roses, gladioli, lily of the valley and peonies.

NOTES.

Joseph Hanky of Charleroi underwent a very serious operation, but is getting along nicely.

J. B. Murdock & Co. are handling some fine American Beauty roses.

K. C. Drewe, Braddock, reports business very good.

Visitor: Mrs. Joseph Hanky, Charleroi.

J.

Cleveland.

GOOD DECORATION DAY BUSINESS.

The ideal weather and the absence of an overabundance of outdoor flowers made this the best Decoration day in years, cut flowers and plants selling about equally well. While carnations and roses were abundant, there were not enough to meet the demand and many of the orders could not be filled in full. Peonies, as previously predicted, were rather a scarce article, although a few red and pink were in, and most of these were buds. Lilac and bridal wreath were good sellers and the quality was never better at 50 cents per bunch. Candytuft, snowballs, daisies and irises were plentiful. American Beauty, Richmond, and Killarney roses cleaned up as did everything in carnations at fair prices. Many of the retailers whose stores are located some distance from the cemeteries, got a permit from the city to sell cut flowers and plants from wagons at the gates of some of the cemeteries, but the business done did not pay for the trouble. On the Tuesday following Decoration day it rained, but two or three big society weddings caused quite a demand. Later the stock piled up and was sold out at ridiculously low prices. The scarcity of fern is causing the price to soar, $2.50 per 1,000 being asked for the better grade. Commencement week and the usual number of June weddings is about all that we have to look forward to now for a time. At the Industrial exhibition, to be held here June 7 to 19, there will be a floral exhibit in the main building, which ought to be worth seeing. The sales for the month of May exceeded the total of April by a considerable margin.

RECENT WEDDINGS.

Perhaps the most notable society event of the year was the Smith-Gowan wedding June 2. The floral decorations of both St. Paul's church and the home were extremely beautiful. The altar and chancel of the church were banked high with palms and ferns, smilax and white peonies. The pillars were wound with mountain laurel caught with bouquets of snowball. The central chandelier was arranged in the shape of a huge wedding bell of bridal-wreath and snowball. The bridesmaids and maids of honor carried shower bouquets of pink roses tied with a pink lace scarf. The bride wore a half wreath of orange blossom, and carried a shower bouquet of lily of the valley. Supper was served on the lawn in tents trimmed with garlands of mountain laurel and rose pink peonies. The centerpieces on the table were white baskets filled with Killarney roses. The centerpiece on the bride's table was five large fancy pink hats trimmed with chiffon and ribbon and filled with Mrs. Jardine roses. Smith and Fetters did all the decorative work, which received much well merited praise. This firm also had a very appropriate window display for Memorial day, consisting of a large American flag, and a stack of arms, with flower trimmings and one large wreath.

The Baker-Clark wedding, Lakewood, was a large affair, American beauty roses, peonies and snowballs being used in the parlor, pink peonies, palms, ferns and apple blossoms in the music room. Smilax and apple blossom formed the canopy, the bride's table had a centerpiece of white iris and Killarney roses. Mrs. Brown had charge of the decorations, which were very artistic.

NOTES.

Miss Symes, formerly with Jos. Eadie Co., will be at the Industrial exhibition in charge of the flower show.

Casper Aul is going to retire about July 1 to go on a farm and raise chickens and mushrooms.

Mrs. Welty had the decorations for the Dean-Tileen wedding, Cleveland Heights.

Visitors: L. L. Lamborn, Canton; George Bowditch, Alliance.

B.

Massachusetts Horticultural Society.

RHODODENDRON EXHIBITION, JUNE 5 AND 6.

The following are the awards for plants and flowers: Rhododendrons, largest and best collection, not less than 15 distinct varieties, six trusses of each, from plants that have been grown in the open in Massachusetts for at least three years: Walter Hunnewell, first. Hardy azaleas, 12 varieties, six trusses each: Wm. Whitman, first.

Gratuities: Wm. Whitman, display of Chinese peonies, azaleas, and German iris; T. C. Thurlow & Co., display of iris and peonies; Mrs. Frederick Ayer, fuchsias, tree fern and iris; Mrs. J. L. Gardner, display of gloxinias; Dr. C. G. Weld, specimen hydrangeas; Bellevue Greenhouses, display of hardy plants in pots; Max Handler, display of hardy flowers; Mrs. E. M. Gill, display of cut flowers.

Bronze medals: Dr. C. G. Weld for Cypripedium Lawrencianum; Wm. Whitman, display of German iris. Cultural certificate: Wm. C. Rust, specimen hydrangeas. Honorable mention: Francis Skinner, collection of rhododendrons; R. & J. Farquhar & Co., display of irises and Azalea mollis; F. J. Rea, Phlox divaricata, var. Laphami. Vote of thanks: R. & J. Farquhar & Co., display of Araucaria excelsa.

Philadelphia.

CARNATIONS ARE ABUNDANT.

Business throughout the city and suburbs relaxed immediately on the opening day of the week which on account of the holiday did not really begin until Tuesday. The public was pretty well frightened by Memorial day prices and was noticeably timid. Consequently there was very little in the way of animation shown and the week ended in another dismal day of heavy rain and disappointment. The most striking feature of the market is the abundance of carnations coming in. The best are bringing only $2 per 100 and quantities of second grade goods are available at $1. Very fine lines of Killarney and American Beauty roses are offered while Richmond is showing the effects of the heat and Kaiserin has assumed the leadership. The market is filled with odd assortments of a varied type embracing all the leading summer novelties. Local peonies are on sale but the crop is not yet extensive enough to be a factor.

NOTES.

Pierce Bros. are in the market for almost everything but roses and the host of admirers of this firm have often wondered why this field has never been ventured. The several motors employed in the delivery service are always on the road, in this way consigning directly to dealers goods that otherwise would be marketed in bulk at the wholesale houses.

W. H. Elliott is now permanently installed in his new salesroom on Park street and from this center the immense stock of Memorial day goods was distributed. Several new methods of distribution have been adopted, each one augmenting the service.

Tom Pegler is handling an enviable collection of summer favorites; among the best stock is a splendid variety of gladioli and his lavender gillyflower is one of the most admired on the market.

E. E. Fletcher, the genial sales agent of the Music Hall Market, was stricken with rheumatism while on a visit to friends in Winthrop and has been confined indoors for the past 10 days.

William Sim has retired from the floral world for the season, having exhausted his supply of sweet peas.

B.

Worcester, Mass.

Business the past Memorial day was the best in the history of this city. Practically all the store help worked Friday, Saturday and Sunday nights before Monday, May 31, and were very tired by noon on Monday; everything sold well, especially bedding plants, anything with a flower being bought on sight, while S. A. Nutt geraniums were almost at a premium. There was a good supply of cut flowers of all kinds of excellent quality owing to the cool weather, which kept back the lilacs, exochorda and other outdoor flowers, these helping considerably in the cheap bouquet work, etc. Rambler roses sold well and H. F. A. Lange had quite a lot just right, Lady Gay, Dorothy Perkins and Baby Dorothy taking the lead. H. F. Littlefield and M. Aitkin had a nice lot of hydrangeas.

Fred Braun, formerly foreman for H. F. Littlefield, is working with his brother at Stafford Springs, Conn.

The Seed Trade.

American Seed Trade Association.

Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

DUNKIRK N. Y.—The Lake Shore Seed Co.'s plant and stock was damaged by fire to the extent of $4,000 May 25.

SANTA CLARA, CALIF.—W. J. Fosgate is remodeling a fine residence which he recently acquired. Sweet peas will be at their best June 20 to 25.

SAN JOSE, CALIF.—Lisle Morrison, late with the seed division of the Department of Agriculture, Washington, D. C., joined the working force of the Braslan Seed Growers Co. on June 1.

THE Wabash Railroad Co. at Chicago calls the attention of all seedsmen west of Niagara Falls to the fact that there is a round trip rate from Chicago to New York and return for $25, good for 30 days, with ample stop over at Niagara Falls.

PARIS, KY., March 27.—Contrary to their annual custom Bourbon county farmers are receiving bids for the bluegrass seed crop. Seed dealers are actively making contracts for stripping rights throughout the country. The yield of seed this season will be but a fair one.—Findlay, O., Republican.

CLEAR LAKE, IA.—Twelve acres of land was set apart at the county farm, near here, this spring, as an experiment station for corn growing, and J. D. Hill, of Ames, is here to take care of the crop. A variety of tests will be made, which will be studied at the coming fall corn judging contest.

J. W. E. TRACY of the Department of Agriculture is now in California. A. M. Kirby of Peter Henderson & Co., New York, is expected there in the near future. Messrs. Burpee and Earl of the W. Atlee Burpee Co., together with Leonard H. Vaughan, of Vaughan's Seed Store, left Chicago June 9, direct for San Francisco.

FORCED TULIP BULBS, after they have served their purpose once, are bought up by some Holland growers and shipped back to Holland to be grown on for a time and again offered as forcing stock, which is very inferior. This practice has assumed extensive proportions in Europe lately, probably due to the scarcity of certain high priced varieties.

Braslan Seed Growers' Co.

Lettuce Onion, Sweet Peas.

Growers For the Wholesale Trade Only.

SAN JOSE, CALIF.

CHICAGO.—Onion sets are looking fairly well on high ground; some growers whose fields are subject to injury from heavy rainfalls are not doing so well.—Contract prices on the board of trade June 9 for grass seed were noted as follows: Prime timothy, $3.90 (nominal); white clover, $16.—Visitor: Chas. P. Braslan, San Jose, Calif.

Connecticut Conditions.

President Woodruff of the American Seed Trade Association writes as follows May 22: "A very cold, wet May up to this writing, with vegetation of all kinds unusually backward fairly describes the local situation. About the usual acreage of onion, beet, kale and parsnip have started off very nicely; roots of the biennial crops, as a rule, kept over splendidly, and there is still plenty of time for crops to catch up and make an abundant harvest. The wet May that makes the barn full of hay certainly ought to work to the advantage of the general farmer, and meadows and grain crops look unusually fine.

Corn planting about finished, and about the same acreage of sweet corn has been put out as usual; in fact, little change from the average acreage of the past five years; an abundant harvest is sorely needed to supply the ever increasing demand for high-grade seeds, and growers in Connecticut section, while their product is limited, claim to and rightfully so, I believe, produce some pedigree stocks that are eagerly sought for at good prices by the trade. There is not a seedsman in this state, I believe, but whose warehouse is cleaned up better than it has been for years.

Another Connecticut View.

Milford, Conn., May 21.—Most of our crops grown from bulbs, such as onion, beet, turnip, etc., have not been adversely affected by the weather conditions because, although it has been very cold and wet, these crops are able to stand that sort of weather at the outset and we should say that they have a very fair start up to the present time. It is difficult to say what sort of a stand of sweet corn we will get. It is, of course, only just being planted and the conditions are just about as unfavorable for its growth as they could be. It will take another 10 days to tell the story, however, on this item.

The seeding of peas has been retarded in Michigan and Wisconsin by the cold weather and the water soaked condition of the ground, particularly of all heavy land. We presume we ought to get accustomed to backward seasons, but it seems as though the conditions affecting the crop of peas at the outset might prove very damaging, particularly to the sweet wrinkled sorts which are not likely to endure such extreme hardship. The beans, of course, are only just moving out into farmers' hands and so nothing can be said in regard to that crop.

Peas AND Beans

Alfred J. Brown Seed Co.,

Growers for the Wholesale Trade,

GRAND RAPIDS MICH.

Ohio Seed Crops.

G. S. Clark, Wakeman, writes: "Regarding the crop conditions here, May was a very cold and backward month, but most of our growers have their corn all planted, and some of it is being cultivated. We have a good to fair stand. The past week has been very favorable to the growth of same, and the germination of all seed corn this past season was so nearly perfect that we do not look for any replanting. We have booked more contract orders than ever before, and we have out the largest acreage that we have ever put out, and if we have a favorable season we will make full deliveries. We have been obliged to turn down some of the late orders, as they were received too late to get them covered by acreage."

The Tariff Bill.

Paragraph 262 of the pending tariff bill was agreed to in the senate, May 29 as follows:

> 262—Seeds—Castor beans or seeds, 25 cents per bushel of 50 pounds; flaxseed or linseed and other oil seeds not specially provided for in this section, 25 cents per bushel of 56 pounds; poppy seed, 15 cents per bushel; mushroom spawn and spinach seed, one cent per pound; beet, except sugar beet, carrot, corn salad, parsley, parsnip, radish, turnip and rutabaga seed, four cents per pound; cabbage, collard, kale and kohlrabi seed, eight cents per pound; egg plant and pepper seed, 20 cents per pound; seeds of all kinds not specially provided for in this section, 10 cents per pound.

Iowa Seed Dealers' Association.

SEED BILL UNPOPULAR.

That the general assembly of Iowa is as nearly capable of deciding whether the moon is inhabited, as it is to pass a law regulating the purity of farm seeds, was the statement made by E. E. Faville, editor of the Successful Farmer, at the annual convention of the Iowa Seed Dealers' Association June 1 at the Chamberlain hotel, Des Moines. The statement of Mr. Faville was made as a result of a general agreement among the 50 delegates, that the present law is class legislation, and that it should apply to the farmer as well as to the seed dealer. The law provides that seeds sold by dealers shall be up to a certain standard, and then proceeds to exempt the farmer from the penalty.

It was shown that the average farmer pays no attention to whether the seed offered for sale to the dealer is free from weed seed. He is allowed to sell seeds where he pleases, it was stated, and as a result, the fields of his neighbors are frequently sown with thistle, foxtail, and other noxious vegetable growths. Mr. Faville was called

C. C. MORSE & CO. 48-56 Jackson St., San Francisco, Calif.

The Largest Seed Growers on the Pacific Coast.

ONION, LETTUCE, SWEET PEAS.

Also Carrot, Celery, Leek, Mustard, Parsley, Parsnip, Radish, Salsify.

upon to tell his experience on the subject. He said:

"In my opinion, the law regulating the purity of farm seeds should apply to the farmer as well as to the dealer. I am convinced that it is not altogether the latter's fault. While the members of the general assembly have opinions of their own on certain subjects, they know about as much on the seed question as one of those personages who inhabit the moon. The law certainly should be changed, and the farmer, as well as the dealer held responsible."

Practically all the speakers were agreed that the law should apply to farmers. It was shown in the 15 prosecutions began during the last year, all the seed was furnished by farmers. Dairy Commissioner H. R. Wright was one of the principal speakers at the session. He believed, he said, that while the law was not for the best interests of the dealer, it was a step in the right direction. The object of the law, he said, was to prevent farms from becoming peppered with weeds.

M. Crawford's Gladioli.

ED. AMERICAN FLORIST:—

May I request the privilege of correcting an inadvertence by Mr. Crawford in his letter on page 972 in your last issue in which he refers to the seed purchased from me in 1895. This seed was not the first hybridizing done by me, neither was it all produced by me the previous year. It was the surplus of the seed raised by me for sale, and should in no way be confused with a larger quantity of seed raised from special crosses, exclusively for my own planting, the product of which was introduced at the Pan American Exposition by myself, and the previous year at New York, before the Society of American Florists, by A. Cowee. I thank Mr. Crawford for the compliment of recognition.

H. H. GEOFF.

Sweet Pea Society Proposed.

A national sweet pea society for America is suggested by Harry A. Bunyard, who has issued a circular letter regarding this proposition. Full particulars can be had by addressing him at 342 W. Fourteenth street, New York.

Seedsmen's Convention—Niagara Falls—June 22-24, 1909.

The Seedsmen from Chicago and vicinity will use the Wabash road to their Convention at Niagara Falls, leaving Chicago on the 3 p. m. train, Monday, June 21st. Special sleeping car accommodations will be provided on this train for the use of delegates and their friends. The fare from Chicago to Niagara Falls and return is $19.50. Tickets will be good by lake in either direction between Detroit and Buffalo.

Those contemplating a trip to New York after the close of the Convention will be interested in knowing that the Wabash will sell round trip tickets from Chicago to New York and return at a rate of $25.50, good for thirty days, with the privilege of stopping ten days at Niagara Falls. This ticket is good for stopover also at Buffalo, Rochester, Syracuse, Utica, South Schenectady and Albany, N. Y. These tickets are also good without extra charge between Detroit and Buffalo by lake, in either direction, and from Albany to New York down the Hudson river. Apply to J. C. Vaughan, 84 Randolph street, or Wabash Ticket Office, 109 Adams street, for sleeping car accommodations.

Imports.

During the week ending June 5 imports were received at New York as follows:

Maltus & Ware, 39 cases, 12 tubs plants, 4 cases orchids.

P. Henderson & Co., 5 cases plants, 14 cases mushroom spawn.

Julius Roehrs Co., one case, 16 baskets plants.

McHutchison & Co., one case plants.

To others, 33 cases, 10 baskets plants, 10 tubs trees, 300 bags, 31 bbls. seeds, 15 cases orchids.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

TRUCK farmers in New Brunswick report heavy sales and good business, especially on potatoes and turnips. The shipments to New York and Boston have been exceptionally heavy this season.

BOSTON, MASS.—All hands will now turn their attention to the tomato crop, the marketing of which has already begun, and will last until well into the summer. Last year's record of 40 tons is to be eclipsed and the prospects are most promising.—B.

A GREENHOUSE as a windbreak sounds strange at first, but a correspondent in a contemporary points out how useful such a structure could be to the grower of truck produce in exposed positions, who could grow his plants inside it, the structure protecting his outdoor crops.

Asparagus.

Asparagus at present is enjoying a great popularity. Millions of plants have been distributed by seedsmen and nurserymen recently, and the call is for more. Comparing the markets now and say five years ago, the heavy plantings are commencing to show up, but we do not fear an over production of choice stock. Just now what concerns us most is proper cutting of the crop. There is a great diversity of opinion regarding the proper age when cutting shall commence. We believe the proper time to commence is as soon as salable shoots are produced. Then cut moderately and feed liberally. Thus it makes little difference whether a patch is two, three or four years old. In fact cutting age is more dependent upon care and feeding than upon number of years. We are now cutting good stock from a patch planted last year, using one year roots. Young patches, say two, three and four-year-olds, should be cut for a short time only, limiting the cutting season with the years. Thus we will cut our young patch about 30 days, next year we may increase to six weeks and, then to seven.

In this country the general practice is to cut clean, that is cut every shoot as it appears. Growers believe they get a better crop that way. In Europe the general practice is to allow the thinnest shoots to grow up in order to keep the plant active and healthy. This European practice is a good one for young patches. Whenever young shoots are allowed to grow up they use up the stored up energy of the root and cutting will soon be over. We know of some growers who cut fully 10 weeks. It is too long. Such treatment weakens the plants and will shorten the life of a patch. Seven to eight weeks is long enough. We have seen asparagus patches mowed down in August or September to subdue weeds, but this cannot be condemned too severely. The proper course is to keep a patch clean at all times; it will pay. MARKETMAN.

Plan for Vegetable Garden.

ED. AMERICAN FLORIST:—

Please give me a plan for laying out a vegetable garden 200x300 feet.

H. B.

Not knowing what kind of land "H. B." has, nor whether he wishes to grow for home use only, or sell the products, it is quite impossible to do this matter justice. Supose such a garden was for profit, it would be best to confine to one or two crops as a specialty. If for some institution its wants would have to be considered, which wants would likely mean a great variety; if for home use, each one seems to prefer some vegetables and care nothing for others. Further, much depends upon the available market. Sometimes one can buy certain things very reasonably and others are unobtainable. For instance, potatoes and sweet corn are very often excluded from some gardens. If the garden can be watered we must consider the means—if by hose, over head pipes, or flooding.

As a general proposition, a garden 200x300 feet should be laid out for horse work. Three hundred foot rows are too long where a variety of crops are grown. It is also difficult to water, and gather from long rows. For coarse crops, such as sweet corn, potatoes, tomatoes, etc., the 200-foot layout would work very well, but for small things it would work best to cut a driveway through the center, thus having 150 feet on each side, long enough for horse cultivation, yet short enough for easy manipulation. The lay of the land must be considered; if on a hillside, short rows in the direction of the slope will reduce damage from washing and give quick drainage.

Permanent crops, such as asparagus, rhubarb and horseradish, should be started on one side, commencing at the boundary line, say asparagus first, because it is most permanent. We must not overlook the nature of the soil. Permanent crops, being in the ground all winter, require perfect drainage. Such a piece of land may vary greatly. If any low and wet side or part, reserve it for celery. If sweet potatoes are to be grown select the warmest, sandiest part for them. The same is true for all vines, cucumbers, melons and squashes. For the coolest, moistest soil, or nearest to water, arrange for cabbage, cauliflower, lettuce, radish, and spinach.

For home use we cannot consume much at a time, hence plantings must be small and frequent. This brings us up to succession of crops. It is poor policy to plant the same thing twice or more in one spot, as it increases damage from disease and insects, besides inviting reduced yields. On this subject we may add that no related family should follow the same or the next season. Thus do not plant cabbage, cauliflower, kohlrabi, brussels sprouts or kale in succession; do not use tomatoes, potatoes or egg plants the same way; nor cucumbers, melons, squashes, pumpkins. To this we may add, always follow an underground crop with one of upper growth and vice versa.

Intercropping is not nearly as desirable as it seems. In most cases we lose on one what we gain on the other. However, some combinations are successful. Thus all vines do well among early potatoes; by the time the vines run the potatoes will be dug. Sweet corn may be planted between potatoes after the last working. Three-foot

Trade Mark. **American Spawn Co., St. Paul, Minn**

rows are most economical for horse cultivation. All potatoes, sweet corn, cabbage and cauliflower, should go into this section. Two and one-half-foot rows are the narrowest for horse work; will suit beans. Tomatoes require four feet and sometimes five. Melons and cucumbers five and six feet. Squash and pumpkins seven to eight feet. For wheel hoe crops 12 inches is best; this includes onion, beet, carrot, lettuce, parsnip, salsify, radish, turnip, etc. For best results there should be two hotbeds, and two cold frames, with top sash and shutters to provide the needed plants at all times. MARKETMAN.

Insects on Tomatoes.

ED. AMERICAN FLORIST:—

I have three houses in tomatoes which I have mulched with cow manure. Since so doing the brown manure fly has become a pest. The fly sets on the fruit and vines, which makes the fruit very unsatisfactory, in looks, for market. F.

The insect which "F." describes as the brown manure fly canot be identified without specimens. The insect fauna of the state of Washington is, moreover, quite different from that of the eastern states and the insects which occur in greenhouses in the Pacific coast region have never been as carefully studied as those of the eastern and central states. I would suggest fumigation with one of the nicotine extracts or hydrocyanic-acid gas, but if "F." will send specimens of the insect it will enable a positive identification, and we can then advise remedies somewhat more understandingly. If it is a true manure fly we should certainly advise "F." to discontinue the use of manure. C.

Prices of Indoor Fruits and Vegetables.

The prices of indoor fruits and vegetables at leading points June 5 were as follows: New York, cucumbers, $1 to $2.50 per dozen; mushrooms, 85 cents per pound; mint, 75 cents per dozen bunches; tomatoes, 12½ to 15 cents per pound; grapes, $1.25 to $1.50 per pound; cantaloupes, $1.25 each; peaches, $6 to $9 per dozen; nectarines, $9 per dozen; mangoes, $7.50 per dozen. Chicago, cucumbers, $1 to $2 per dozen; head lettuce, $3 to $6 per bbl.; mushrooms, 40 to 85 cents per pound; tomatoes, 10 to 20 cents per pound; radishes, 40 to 60 cents per dozen bunches; grapes, Gros Colmar, $1 to $2 per pound; peaches, $15 per dozen; English melons, $15 per dozen; peppers, 30 to 75 cents per dozen; rhubarb, 6 to 10 cents per pound. Kansas City, cucumbers, 65 cents to $1 per dozen. Cincinnati, cucumbers, 30 to 40 cents per dozen; mushrooms, 40 cents per pound. Boston, cucumbers, $3.50 to $4 per box.

Polypodium Aureum Mandaianum.

At the National Flower Show in Chicago a much divided form of the common golden polypody (Polypodium aureum) was shown under the name of Polypodium aureum Mandaianum. The form is named for the orginator, W. A. Manda, who claims it to be a sporeling from Polypodium aureum glaucum The glaucum in this combination is apparently the trade name for what scientists know as Polypodium aureum areolatum, or Phlebodium aureum areolatum. The new form, then, is properly named P. aureum areolatum Mandaianum or P. aureum f. Mandaianum. As the study of fern forms is receiving increased attention, it is very desirable that the new forms originated be placed on record under their proper names. Considered from the purely decorative viewpoint, the new form is a very handsome plant.—**Fern Bulletin.**

Varieties of Polypodium Vulgare.

In view of the greatly increased interest taken in hardy and native ferns in this country, the following notes on the common polypody, from the pen of one of the best known British fern authorities, reprinted from the Journal of Horticulture, have a special value. Conditions here are, of course, different to those in Britain, but the suggestions given will be very useful to those forming collections of these interesting plants:

"The British flora embraces four species of the genus polypodium, a word which means many-footed, and is applicable to the form of the rootstock, which is a creeping one, consisting of a number of more or less fleshy stolons, or runners, such as we see in a more marked form in the haresfoot fern and other davallias. Curiously enough, however, the genus polypodium embraces only such ferns as bear their spores on the frond backs, in round or oval uncovered heaps, while most ferns have a sort of skin-like protective cover over the spores, at any rate, until they break through it at maturity. Hence there are numerous species of ferns, like the davallias above mentioned, which have the many-footed character obvious enough, but must not be called polypodiums because they bear their spores in different ways, and with some form of cover.

"Our four native species are P. vulgare, the common polypody; P. dryopteris, the oak fern; P. phegopteris, the beech fern; and P. calcareum, the limestone polypody. P. vulgare is altogether distinct from the other three, having tough, evergreen, once-divided or pinnate fronds, which spring in succession from fleshy rootstocks as thick as one's little finger, and travel but slowly by growth at the tips. The spores, of a bright orange yellow, are borne in large round heaps on the frond backs. The other three, with which we do not propose to deal at present, are deciduous, with thin, delicate fronds, bearing tiny, black or very dark brown dot-like spore heaps, while the rootstocks are like coarse strings, and travel rapidly in the loose leafy soil they delight in. It is also only in very congenial, moist situations that we shall find the oak and the beech-ferns, growing on walls and stone dykes; while the common polypody braves the weather far more boldly, and grows in most parts of the country, but more especially in the west, on old walls, old trees, and in the woods where broken up soil and rock and accumulated leaf mould afford congenial stations.

"In banks by the roadside, part rough stone wall and part hedge, the common polypody may be seen for miles fringing the upper parts with its pendulous fronds, its rambling roots being securely anchored in the cracks and crevices of the stones, or in the leafy débris of the hedge banks, half road dust and half decayed humus, which accumulates in such situations. Or we may come to the more formally built stone walls of aristocratic estates, and find it equally at home on their tops, where falling leaves and its own dead fronds have in time enabled thick masses of rootstock to accumulate.

"To grow this fern artificially, we must consider what these conditions mean. First and foremost, the situations are always well drained; secondly, we shall always find the creeping rootstocks to be exposed to the air, and not deeply buried in the soil; and thirdly, it is obvious that a plant of superficially rambling habit, is more at home in a shallow pan than in an ordinary pot. Such a pan, then, should be well drained with crocks, and filled with a lumpy, sandy compost of peat or leaf mould, the creeping rootstocks being embedded in the surface, with the finer roots proper buried beneath them. Hanging wire baskets lined with moss, and filled with similar compost, serve well for this species, which, when well established, will push through all round, and form a handsome specimen, always provided it is not allowed to get perfectly dry, since very few ferns indeed can survive droughts to that extent.

"In recommending these modes of culture we must confess that we have not in view the common polypody we have described, but its beautiful varieties. Nature has gifted this species, like most of the other British ones, with a power, here and there, of sporting spontaneously into very distinct and far more beautiful types. Thus there are several plumose or feathery forms, such as the well-known Welsh polypody (Cambricum), and several improved sub-varieties of this in very distinct lines, including Prestoni, Hadwini and Barrowi. There are also a number of tasselled varieties in which the side divisions and tips are more or less heavily crested, even to the extent of turning the whole frond into a single mass of cresting. Cristatum, Bifido-multifidum, Ramosissimum, Grandiceps (Parker), Grandiceps (Fox) and Grandiceps (Forster) are all beautiful, while Pulcherrimum and Elegantissimum (Cornubiense) preserve examples of dissected kinds of great beauty. No one who has grown specimens of any of these dreams of devoting space to the wayside forms, so much more charming are the varieties in question. They are all equally hardy and equally evergreen, so that through the winter, when most ferns are either invisible or shabby, these retain their verdure perfectly, and although when frozen hard the fronds shrivel and look very woebegone, the thaw restores them entirely and leaves them no whit the worse."

Fischer's Grand Freesia

PURITY

The Unequalled, White Decorative Freesia :: ::

Send in your orders early if you want to secure the large sizes. I am booking large orders now for them and will have to refuse orders for Mammoth, although I will have more than other years. My stock is absolutely pure as great pains are taken to remove any rogues that may appear. All seed pods are removed avoiding all danger of mixture, as **Purity** does not come true from seed. Dealers getting their stock from me will always be sure of getting the purest stock.

LILY OF THE VALLEY.

The Nursery Trade

American Association of Nurserymen.

C. J. Brown, Rochester, N. Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.

ONE of the objections raised to the use of lime-sulphur solutions on fruit trees is the whitening effect on the fruit if used about the time this is coming to maturity. This weathers off if used earlier.

LITCHFIELD, CONN.—The Rosemore Nursery has been incorporated with Wm. T. Marsh president, Dr. John L. Buel vice president and A. T. Bulkley secretary and treasurer. The capital stock is $10,000.

KNOXVILLE, TENN.—A charter of incorporation has been granted at Nashville to the Standard Nursery Co. which is capitalized at $35,000. The incorporators are N. W. Hale, W. P. Wilson, C. W. McCormick and S. J. Herrell.

CHIEF FORESTER PINCHOT has sent to the presidents of all the leading railroads in the country a letter calling upon them to join in the effort to conserve the national timber supply. He points out that we are cutting our forests three times faster than they are growing and that in railroad ties alone the railroads enter the lists of the largest consumers. He suggests that they prolong the life of ties by chemical treatment; that they use so-called inferior woods; that they buy and properly manage lands bearing mature timber; that they plant trees upon non-agricultural land, and that they co-operate in fire prevention. All these suggestions would seem to be reasonable and feasible. Certain roads have already seen the handwriting on the wall and are planning to produce their own supplies of ties in the future.

Trees and Shrubs at Rochester, N. Y.

Exochorda Alberti was almost in full bloom May 20. It is unusually handsome in bloom this season, as it is sometimes inclined to be a shy bloomer. The pure white showy blossoms are much larger than in E. grandiflora, which comes in bloom from five to seven days later and is now in full flower. The handsome rhodora (Azalea Canadensis) opened its first lavender blossoms on May 16 and is now entirely past. Kaempfer's azalea (A. Indica Kaempferi) opened its first blossoms on the same date as the last and its lovely deep salmon red flowers are at present very showy. This is a splendid garden plant. A. Vaseyi also came in bloom with the above and some belated individuals are now in good flower. The handsome chaste blossoms, varying in different individuals from deep pink to almost white, are beautifully conspicuous. The Chinese azaleas in variety, with their showy orange, orange red, and yellow blossoms, are now coming in flower, and two Ghent varieties, Fritz Quihoni and Pallas, with handsome dark reddish blossoms, are now coming in flower. The handsome A. pontica, with clear yellow blossoms, is now in full bloom. A. nudiflora, our handsome native species, came in bloom May 27. Its rosy pink flowers are always pleasing.

Rhododendron punctatum opened its first flowers on May 25. This is a lovely garden plant and the flowers vary on different individuals from pink to pale lavender and almost pure white. R. racemosum, a dainty and rare small growing species with somewhat bell-shaped flowers, pink to deep rosy pink, came into flower May 25 and is now in good bloom. The first of the hybrid rhododendrons to bloom was Mrs. Davies Evans, which opened its first purplish lilac flowers May 25 and is now in full flower. As this is somewhat tender we keep it in a cold frame over winter. R. giganteum came in bloom May 25 and is now handsome. The deeply pinkish red or rosy red flowers are very conspicuous. R. Boule de Neige, with pure white flowers, is now coming in bloom. This has a remarkably compact habit and it is one of the hardiest rhododendrons in this neighborhood and for a white flowering variety it has no equal with us. R. atrosanguineum and R. Alexander Dancer, with dark red flowers, are now coming in bloom.

Pieris (Andromeda) floribunda was in full flower on May 15 and is still displaying a good many blossoms. The numerous racemes of white flowers surmounting the deep green leaves are very attractive. Enkianthus Japonicus, with its bell-shaped white flowers somewhat hidden amongst the leaves, is a rare choice shrub. The common native swamp blue berry (Vaccinium corymbosum) with its numerous clusters of white bell-shaped flowers is a most excellent garden shrub and is now in full bloom. V. pallidum, with its greenish-pink flowers, is now in bloom. The Chinese red bud (Cercis Chinensis) was in fairly good bloom on May 20. It has been unusually fine with us this season. The American red bud (C. Canadensis) opened its first flowers on May 21 and is still in fairly good bloom. The pure white flowering variety has not been long in cultivation. It comes into bloom a few days later than the type. Cercis siliquastrum from south Europe is not hardy with us and always partly kills back. The pinkish flowers, a few of which survived the winter, were open on May 25.

Amongst the evergreen barberries, Berberis repens, which does remarkably well here, was in full flower on May 17. The numerous terminal panicles are intense bright yellow. B. aquifolium, which blooms at the same time as the last, with yellow clusters, made a good display this season. B. fascicularis, which is not quite hardy here, blooms a day or two behind the others, and the small loose yellow flower clusters are produced along the branches. B. dulcis has orange yellow single blossoms which were open May 25. B. stenophylla has three flowered yellow clusters which are graceful and attractive and was in bloom May 25. Amongst the deciduous barberries B. Thunbergii is about the first to flower and its yellowish pretty blossoms hanging thickly on the branches were in good bloom on May 18. B. Sibirica, B. Regelianum and B. vulgaris Japonica were displaying their pretty yellow clusters on May 25.

The Colchican bladder-nut (Staphylea Colchica) with its fragrant white clusters was in full bloom May 24. Job's tears (S. pinnata) was almost in full bloom on the same date as the last. The whitish flowers with petals and sepals tipped with brownish pink, in usually two ranked racemes, are not nearly as showy as S. Colchica.

The white-flowering dogwood (Cornus Floridus) is in glorious bloom just now. It is several years since it looked so gay. It came into full bloom May 24 and is now (May 29) in fine condition. Kerria Japonica, the single form, has been in good bloom since May 19. Rhodotypos kerrioides, with its pure white flowers resting prettily amongst the leaves, has been in flower since May 23. Daphne cneorum, with its pinkish and fragrant blossoms, and D. Genkwa, with its lavender flowers, have been in bloom since May 15. Aesculus arguta, with its yellowish flower clusters, was in flower May 20, and the common horse chestnut (A. hippocastanum) is now displaying its bouquets of whitish flowers. A number of bush honeysuckles have been in bloom since three or four days. Amongst them are Lonicera Tartarica in variety, L. bella in variety, L. Segreziensis, L. parviflora, L. Mundenensis and L. Xylosteum, with variable rose-tinted, pink, white or yellowish blossoms.

The Chinese lilac (Syringa oblata), which we mentioned as coming in flower in our last notes, is now passing out of flower. A new species, S. Giraldi, recently introduced from China, blooms about the same time as the last. We noticed two good bushes six to seven feet in height in full flower in the home grounds of the Ellwanger & Barry nurseries on May 24. The pale lavender flowers with partly reflexed petals and with sometimes five to six panicles combined in one inflorescence, stand prominently above the leaves and look quite showy, and it certainly is a most desirable early flowering lilac and should prove popular in time. The varieties of the common lilac (S. vulgaris) are now bueautiful in half-open condition.

JOHN DUNBAR.

American Association of Nurserymen.

ROCHESTER CONVENTION (BY WIRE).

The thirty-fourth annual convention of the American Association of Nurserymen was opened at the Hotel Seneca, Rochester, N. Y., June 9, to be continued until June 11. All along it had been expected that the convention would be well attended in Rochester, which has been termed the nursery headquarters of America, and these expectations were amply realized, a very large number of representative men in the trade being present. President Brown's address was well received as were the reports of Secretary Seager and Treasurer Yates. The address of welcome by the Hon. H. H. Edgerton, mayor of Rochester, was extremely cordial and put all in good spirits and the various papers read were of a practical nature as was to be expected from the caliber of the speakers and aroused great interest and enthusiasm as well as calling forth considerable discussion. With few exceptions the programme was carried out in its entirety though all regretted that J. W. Hill of Des Moines, Ia., owing to illness and death in his family, was not able to read his promised paper on "Should Wholesale Protect Retail?"

QUINCY, ILL.—John A. Heller, 1117 North Eighth street, has retired from business entirely. He has been constantly at work every day in the year, for others from June 10, 1854 until 1881, when he went into business for himself and has worked constantly every day until now his five greenhouses are being torn down to make room for modern dwellings.

ELMIRA, N. Y.

The Nitro-Bacterine Cult.

Much interest is being taken in this subject in England just now. For two or three years past Professor Bottomley of King's College, London, has been working up the life history and work of the minute organism now known as Pseudomonasradici cola, and he has prepared special cultures, which he claims have the power of fertilizing a sterile soil—even a slag heap. Many English nurserymen and seedsmen are booming the nitro-bacterine cultures and are offering inoculated seeds of sweet peas and other plants to their customers. In many instances glowing accounts have been given as to the marvelous results that have been obtained by its use; but as these accounts are mostly from unskilled amateurs who have had little or no experience in gauging the difference between a good crop or a bad crop of anything, their enconiums must not be taken too seriously.

The Royal Horticultural Society carried out some experiments last year in its gardens at Wisley, with Professor Bottomley's cultures, and the results were rather of negative value. Apart from scientific grounds, the trials were hardly conclusive one way or another, simply because the rows of peas (that was the crop under trial), although of the same length had a varying number of plants in each. This was due to mice, mildew and other unlooked for factors. It was therefore scarcely fair or scientific to weigh the produce of one row against another, as the number of plants in each were not identical. Professor Bottomley also claims that his instructions were not carried out properly and that the nitro-bacterine cultures were applied to some flats that had been previously treated with acid manures. He distinctly stated that the bacteria will not work in acid soils and therefore the trials on these flats were rendered useless. However, fresh trials will be carried out this year, and let us hope they will be conducted on somewhat better and more easily understood lines than they were last year. A definite number of plants, say 100, 200 or 500, should be taken and grown under identical natural conditions. The cultures could then be applied to a certain number in various ways, and the untreated plants, or those grown in the ordinary way, would serve as controls to the entire experiment.

On May 13, Professor Bottomley lectured before the members of the London branch of the British Gardeners' Association on his specialty. He made a good deal of fun out of the pseudomonas, and explained in popular language what an interesting little fellow he really was, and what marvelous work he was capable of performing under proper conditions. There are apparently three distinct forms or shapes of the bacterium, globular, cylindrical and spiral, or, as the professor put it, billiard ball, cigarette and corkscrew. The bacteria attack the root hairs of leguminous plants, pass into the tissues first of all in a thread-like form, and afterwards split up. The process of reproduction is so rapid under proper conditions that at the end of 24 hours it has been computed that 28,000,000,000,000,000 (the reader can put the 15 cyphers and the 28 into his own language) are the result of one parent—that is, if a sexless organism can be called a parent. The curious thing is that bacterium No. 1 splits into 2, when ready. There are then two distinct bacteria, each as perfect as the one from which the first sprang, but where did 1 go to? And so on with the teeming millions that are produced apparently forever and forever. A point of practical importance to the gardener is this, that, on the surface of the soil, no bacteria exist; but at six inches deep about 250,000,000 are to be found in one gram of soil; the number then decreases the deeper one goes. The argument, however, is that, if deep cultivation is practiced the bacteria are encouraged to invade the sub-soil, and in this way bring about a fertilizing influence upon it. The subject is teeming with possibilities and perhaps gardeners who take a practical interest in these scientific aspects of their profession can do much towards solving the problem.

OUR NEW CARNATION SHASTA

Is always pure white, is always in bloom and is always high grade.

"BUSINESS NECESSITY"

Edition of 1909, Postpaid, $3.00.

THIS is the only term which describes the American Florist Company's Directory, just out. This book, 548 pages of facts tersely told, is issued annually and is an aid to business and money making which no wholesaler or traveling salesman can afford to be without. It contains the name of every Florist, Nurserymen and Seedsmen, arranged both by states and towns and alphabetically; and lists of experiment Station Horticulturists, Landscape Architects, Horticultural Supply Concerns and Leading Foreign Firms. It will save many times its cost by enabling you to cover America with your catalogue and at the same time waste no printed matter or postage on dead names.

A Ready Reference Manual.

I. M. RAYNER, Greenport, N. Y.

Winnepeg, Man.

Business has been exceptionally good this last two weeks. There has been a bigger demand for bedding stock than ever before, with prices good for first class stock. There has also been a large number of weddings, which have kept all busy. There are also some very good ones booked for next week. The weather conditions are ideal just now for the bedding stock, slight showers and warm weather which are very acceptable after our late spring. Prospects are splendid for bumper business this season.

Nothing has been arranged so far this season for an outing but we intend having one later in the summer.

K.

VINCENNES, IND.—W. A. Rieman's peony fields, three miles north of this city, are just at their best and, although thousands are being shipped daily to all parts of the country, the demand is said to exceed the supply and Mr. Rieman is extending his plantings.

Our Pastimes.

Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.

Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

GRANDPA BRASLAN says no young business man can lick up all the booze in his town, or even try to and be a success either as a seedsman or a florist.

At Chicago.

Competitive bowling was begun at the Bensinger alleys last Friday evening to select the five-man team that will represent the Florists' Club at the S. A. F. convention at Cincinnati in August. There was a large attendance and great interest was displayed. John Zech proved the premier pin getter, hitting the wood for an average of 203 flat, with 237 for high game. Henry Kruchten bowled three consistent games and finished with 193 1-3. Allie Zeck got a good start with two games of over 200, but fell down on his last game and finished with 182 2-3. V. Bergman and T. C. Yarnall completed the five high men with averages of 177 1-3 and 176, respectively. Several others finished well up and may give the leaders quite an argument before the competition closes.

THE SCORE.

O. Goerisch	144	126	145
J. Kruchten	118	142	127
G. Peiser	100	153	104
F. Ayers	171	138	180
J. Zech	237	181	191
J. Degnan	165	167	165
J. Byers	154	114	121
A. Zech	200	203	145
F. Pasternik	173	134	152
J. Michaelson	149	148	156
C. McKellar	105	174	145
A. Rennie	101	86	97
F. Krauss	141	111	108
H. Kruchten	177	198	205
E. Schultz	165	158	150
J. Vogel	91	67	82
T. Graff	125	171	131
E. Farley	120	146	151

At New York.

BASEBALL JUNE 6.

The game of baseball between teams from the wholesale and retail employes was played on the afternoon of June 6 on the Jasper oval, 135th street and Amsterdam avenue. The features of the game were the hits of G. Allen and Clarke of Wadley & Smythe's and the catching of Matthews, which would have made John McGraw take notice if he had been there. The retailers won out. The score follows:

Retailers.	R.	H.	P.	A.	E.
Bahr, 1b.	3	4	8	2	0
Smith, 2b.	3	2	2	3	1

BOWLING.

C. L. Seybold, superintendent of Carroll park, Baltimore, Md., took part in the national bowling tournament at Madison square garden last week and made an average score of 200. Look out for him at Cincinnati! B. L. Chadwick of Vaughan's Seed Store also took part in bowling at the garden, making an average score of 190.

SOUTH BEND, IND.—The Berger Floral Co. has been incorporated with capital stock $40,000. August F., L. M., Paul O., Herman H., Rose A., Wm. R. and John F. Berger are the incorporators.

San Francisco.

BUSINESS BETTER.

After a long spell of very slack business the retailers have had a few days in which they have been able to add a little on the right side of the ledger, as Decoration day has been a remarkably busy time with all. As the business divided itself over three or four days, everyone had ample time to attend to everything that looked like an order. Flowers of all kinds were plentiful with the exception of good roses, but as the demand is mostly for cheap flowers, the former were not missed very much. Owing to our mild and equable climate there is no demand for bedding plants, etc. for Decoration day, cut flowers only being in demand. The leading outdoor flower at the present time is the sweet pea, enormous quantities having been sold during the last week. Next in line come Gladiolus The Bride, gypsophila, stocks, marguerites, iris and other seasonable flowers. The price of all kinds of stock was quite low, which was very satisfactory to the retailers, but not so to the growers. We are now looking forward to a very quiet season the next three months, after a busy two weeks for the school commencement exercises, for which occasions quite a lot of flowers are used.

NOTES.

The MacRorie-McLaren Co. has secured the contract to remove two Phœnix reclinata, the trunk of each being 3½ feet in diameter and 25 feet high and each weighing about 10 tons. These palms, which are quite historic, are growing on the famous Nob Hill, passed through the conflagration three years ago, and although all the buildings and anything burnable in that neighborhood were swept away by the relentless flames, these had only their leaves burned off and the next year they began growing as vigorous as ever and are now quite presentable plants. They are growing near the ruins of the former Huntington residence and will be removed to H. E. Huntington's place at San Gabriel near Los Angeles. In connection with this it is most remarkable that hardly a shrub or tree or any other vegetation which passed through the fire showed any signs of life after, but wherever we have seen a phœnix it is now growing most vigorously. The name seems to be very appropriate.

An interesting private place visited recently is Slade's. Charles Ehrlich is the head gardener here. Mr. Ehrlich has only a few small greenhouses under his care but he is growing some excellent plants, especially ferns, one specimen plant of Davallia Mooreana being in particularly fine condition. Mr. Ehrlich is growing some specimen chrysanthemum plants for the fall show which look very promising; he also has a large collection of dahlias with which he will compete for the prizes. The outdoor roses are a special feature on this place and although the main season was over, they were still a sight long to be remembered. A lot of Mrs. John Laing and Ulrich Brunner with immense flowers certified to the skill of the man attending to them.

During a recent visit to J. B. Coryell's place at Fair Oaks we found the head gardener, Andrew MacDonald, busy potting a new importation of Cattleya labiata. There are quite a number of houses at this place devoted to orchids and they all look in fine condition especially one house which is filled entirely with phalænopsis, quite a number of these being in bloom. Mr. MacDonald is also growing some very fine specimen plants of ferns, palms and foliage plants, one large house being almost entirely filled with crotons. This is as fine a collection of crotons as I have seen anywhere, almost every one being a specimen plant and all being most brilliantly colored.

At Redwood City we called on H. Goertzhain, who was busy potting chrysanthemum cuttings. He was also getting a large enclosure ready which is covered entirely with cheese-cloth, 25,000 yards being used for it. He is growing 55,000 plants in this place all single stems. The flowers under this covering grow quite as large and perfect with long stems as those grown under glass. Chrysanthemums and asters are Mr. Goertzhain's specialty, besides these he grows carnations and lilies quite extensively; of the former he had quite a fine lot in bloom at the time of our visit.

D. MacRorie and D. McLaren recently incorporated under the name of the MacRorie-McLaren Co., with offices at 721 Crocker building, will engage in landscape work, importation, growing and dealing in orchids, bulbs, seeds, trees, shrubs, hardy and greenhouse plants. Mr. McLaren is the son of the well known superintendent of Golden Gate park, John McLaren.

John R. Sievers who, soon after moving into his new store corner Powell and O'Farrell streets called a creditors' meeting, offered to settle his indebtedness at 25c on the dollar, the indebtedness amounting to $19,000, is still continuing in business. This firm has no connection with the Sievers Floral Co.

The growers and gardeners on private estates are all getting busy growing specimen plants and flowers for the fall flower show. As the prizes offered are quite large the competition will be very keen especially in chrysanthemums and dahlias.

F. Ludemann, the pioneer nurseryman on the Pacific coast, has been quite sick recently, but is slowly recoveing, and we hope to see him entirely well again in the near future.

Matraia and Sargentini who a few weeks ago opened a very pretty store at 307 Sutter street have gone out of business again.

In San Mateo we found C. Fick quite busy in his store with some funeral work. P.

TRADE GOOD.

Business for the last month was very good, in fact much better than last year, especially Decoration day; flowers were somewhat scarce on account of the cool weather and the damage by hail April 28 and therefore most of the stock had to be sent in from Chicago and other places. A good many peonies are grown in this vicinity but they went back on us this year, the first time in a good many years. Carnations sold for $1 per dozen, peonies $2 per dozen, roses $1 to $2 per dozen. American Beauty $6 per dozen. Pot plants of all description sold well especially hydrangeas, and brought good prices; bedding plants never before sold so well and almost everyone is sold out.

NOTES.

Growers have been busy replacing glass damaged by the hail, April 28. Hess & Swoboda have six houses of carnations repaired and are cutting some nice stock again. A. Donaghue will rebuild some of his houses entirely.

The Florists' Club held its May meeting at Paul B. Floth's residence in honor of his recovery from a long and treacherous sickness; the meeting was well attended.

J. Hadkinson and wife have left for Tacoma, Wash., where Mr. Hadkinson has a position as manager of the city parks; we have lost an active and valuable man.

RECORD BEDDING PLANT TRADE.

Spring plant trade is about over and in looking over the records of past years the Tri-City florists are all of the one mind, that this year's business was the best and biggest in the history of the trade. Never in the writer's past experience has he seen every greenhouse so well cleaned out of plants as this spring and owing to the miserable and backward spring six weeks' work had to be accomplished in two. To say it kept the boys humping is putting it mildly; 16 hours were put in many a day and some days even more, but it is over and every one seems to be well pleased with the results.

The Tri-City Florists' Club sprang a pleasant surprise on their worthy ex-president, William Knees of Moline. The boys all gathered at the Rock Island Turner hall and Emil Boehm brought the victim of the surprise party to the hall in his new auto and ushered him into the hall where the boys were all seated to a fine spread waiting his arrival. William Knees was surely a surprised man but soon joined in the gaiety and thanked them for their good wishes. The party was in the nature of a farewell as Mr. Knees leaves this week for a three months' visit to Germany. Henry Gaethje presented Mr. Knees with a life preserver, which will not only keep him afloat but will provide him with food for two weeks. The life preserver was in the nature of a large pretzel, being about three feet in diameter.

Emil Boehm, superintendent of parks, is seen spinning around the parks in his fine new automobile. T. E.

Color of Fern Spores.

Fern students seldom trouble themselves about the color of fern spores though familiar with the changes of color that the sporangia go through in the process of ripening. The spores are by no means the rusty-brown objects that some may be led to think they are from a hasty glance at the sporangia or sori; in fact, although brown is the prevailing color, there is quite a range of color outside of this that the spores may adopt. According to "The Book of Fern Culture" the spores of the osmundas are bright green, in Pteris argyrea they are quite black. In most of the davallias the spores are yellow, in some of the gymnogrammas they are nearly black while in a few adiantums they are pale yellow. The shapes and markings of fern spores are subjects that as yet have been practically untouched though in allied plants, as the isoetes, these points may serve to distinguish species. A study of fern spores would be a most interesting pastime for those who have a compound microsocope.—Fern Bulletin.

TRADE GOOD.

Trade in this city has had a good lift from June weddings, of which there are not a few. A few days ago Miss Sharples, of the Joy Floral Co., made a striking bouquet for a beautiful widow who was committing matrimony for the second time. It was made of white lilac and pink roses. The white lilac is out of season here and hence its feathery beauty was the more appreciated, and the bouquet called forth many encomiums to its beauty. The same firm made a beautiful center piece, for the bridal table at another wedding, of cattleyas and lily of the valley. The bride carried a bouquet of the same beautiful blossoms. Around the basket on the table were small silver loving cups filled with lily of the valley. Between the cups were silver candelabra, and from one to the other, in graceful arrangement, was garlanded asparagus. The entire wedding plan was elaborate, an improvised altar being made of palms and lilies, which were very effectively arranged.

On Decoration day a wagon load of candidum lilies were brought in from the Hermitage gardens and sold for the benefit of the association. These lilies grow very luxuriantly in this old fashioned garden, and have been there for half a century. M. C. D.

WIETOR BROS.,
51 Wabash Avenue. Chicago.

The Belfast Chrysanthemum, The Queen of Winter. The most profitable 'mum in sight for Christmas and later. Easily sells for one-third more than Nonin or any other variety. Size, color and keeping qualities is what does it. Can be had all through the winter by propagating and planting late. They are fine to follow early 'mums; of the very largest size. Color, light pink to cream white. Perfectly healthy and easy to grow. A seedling of W. H. Chadwick and Western King. Extra large cuttings from soil or sand, $2.50 per dozen; $18 per 100, prepaid. Willis E. Hamilton, Belfast, Me.

Chrysanthemums, good stocky cuttings from soil, ready for benching; all orders filled promptly. White: Estelle, Opah, Ivory, Oct. Frost, C. Touset, W. Bonnaffon, T. Eaton, Mrs. Robinson, Jeanne Nonin. Yellow: Monrovia, Cremo, Golden Wedding, Y. Jones, Maj. Bonnaffon. Pink: Glory of Pacific, Dr. Enguehard, Wm. Duckham, Minnie Bailey, M. Dean. Red: Black Hawk, Cullingfordi; potted plants, 2¼-in. of the above; also Clay Frick, B. May, Y. Eaton, $2 per 100. D. H. Green, West Grove, Pa.

The King Iron Frame Greenhouses.

The King Construction Co. has issued a bulletin under the above title giving particulars of many of the large structures built of late by the company and others under course of construction. The company claims for its structures durability, great rigidity, economy and, as nearly as it is possible to get, unobstructed light, no posts for supports being used on any house under 54 feet in width. The company is to be congratulated on having secured the contract for the largest single span greenhouse in the world, the 172x700-foot structure now in course of construction for the Florex Gardens, North Wales, Pa.

A few particulars are given in the bulletin respecting this house which are very interesting and somewhat startling. The ground covered is about three acres and 70,000 American Beauty roses will be planted in it. There would be room for 100,000 of the ordinary tea varieties. There will be 46 beds each taking three rows of plants and the combined length of these beds would be over six miles. No less than 10½ miles of 1¼-inch steam pipe will be used in the heating and about 135 tons of glass will be used in the roof. Truly a mammoth house, but the King company states its willingness to erect houses 200 feet wide or over, as well as the smallest leanto that may be needed. The fame of these truss houses has spread to Europe, both English and French growers using them as well as a very long list of successful florists in this country and in Canada. Nothing succeeds like success, and we are glad to see this enterprising firm so extending the fame of American-built greenhouses.

CUYAHOGA FALLS, O.—Our friend M. Crawford writes that some very valuable everblooming strawberries, which will be introduced later, are growing on his grounds and may be sampled at his farm, Talmage avenue, one mile southeast of the city hall, between June 15 and October 25.

GRAND FORKS, N. D.—"Trade has been very good here right along," says E. O. Lovell, "Easter and Memorial day especially. The condition of the trade is healthy and, from our standpoint, the growers need not fear to push to their fullest capacity."

Hammond's Slug Shot is Sold by Seed Dealers all over America

A Grand Show of ASTERS

The Station Agent's Plan.

My Aster beds are a strip of ground along the railroad track of the Central New England. For years it has been my pleasure to have a grand show. The most troublesome annoyance which I have had is the **Black Beetle** and the **Striped Bug**—these pests will skin the whole bunch if we let them alone, but we don't let them alone, for as soon as the plants are well grown I just take Hammond's Slug Shot and a bellows and go over the whole. On a still day **dust settles everywhere.** Then when the blooms begin to open we give them another dose, and we have the flowers. This year we let them go and the bugs or beetles got a start and we started for them but they did us damage. Now for a good many years I have known Slug Shot and have used it, and there is no use trying to raise Flowers or Fruit or Vegetables without you watch them, because as sure as the sun shines you have Bugs, Lice or Beetles which you must get rid of. Now on Cucumbers the Striped Bugs play havoc. You told me once to put some Slug Shot in water and sprinkle the rows. When that is done the Cucumbers grow. The Cherry trees will curl their leaves with lice; if you can blow Slug Shot over these ends the Slug Shot sticks to the sticky mess which comes where these lice are and they do not spread,

Yours respectfully.
LUTHER BRUNDAGE, Billings, N. Y., October 25, 1908.

with Lemon Oil Insecticide, adding 30 parts water. No odor, no poison—advantages over Fish Oil or Tobacco products. Used everywhere. If not sold by your seedsman, write WEATHERBY BROS. Baltimore, Md., for full information.

FREEPORT, ILL.—Louis Bauscher is arranging to greatly increase his greenhouse space and will erect three new houses 27x170 feet at once. The vacuum steam heat system will be used, two 60 h. p. boilers being installed. A private water works will also be among the improvements, a 10,000-gallon tank being erected at sufficient height to give the required force for watering and fire protection. The new range will be in charge of A. Pitterle.

Evansville, Ind.

Business for Decoration day was at least 15 per cent better than ever before and would have been better still if the street car strike had not been on. Peonies and carnations took the lead. Lilies, daisies and roses sold well at the regular Decoration day prices. The retailers had all they could do. Plant trade is nearly over with about the usual amount of bedding done. Field carnations are doing well.

June 1 marked the grandest wedding in southern Indiana. Miss Frances Ingle of Oakland City to Dr. Wm. Bebb of California. Miss Ingle is the daughter of David Ingle, one of the large coal mine owners of this section of the state. The decorations were of asparagus, smilax, roses, sweet peas, daisies and peonies well lit with a profusion of colored electric light globes. The decorating was done by the Wm. Blackman Floral Co. G. W.

BRISTOL, CONN.—Terry & Peck are at their annual work of putting the park of the passenger station in order for the summer.

MORNINGSIDE, MASS.—L. W. Acheson of Hamblin street has met with an accident to his hand, caused by cranking his automobile.

BOOKS FOR FLORISTS

The following books should be in every florist's and gardener's library. A good book on any subject in which you are specially interested is worth years of experience and should be kept convenient for reference at all times.

Send prices quoted and we send the books.

THE AMERICAN CARNATION (C. W. Ward).—A complete treatment of all the most modern methods of cultivating this most important flower. Illustrated. $3.50.

THE HORTICULTURISTS' RULE-BOOK (L. H. Bailey).—Contains information valuable to all those engaged in any branch of horticulture. Illustrated. 312 pages. 75 cents.

MANUAL OF THE TREES OF NORTH AMERICA (Sargent).—The most complete and authentic work on the subject. The pages number 826, with over 600 illustrations. $6.00.

THE ROSE.—Its cultivation, varieties, etc. (H. B. Ellwanger).—A complete guide of the cultivation of the rose, together with the classification of all the leading varieties. $1.25.

HOW TO MAKE MONEY GROWING VIOLETS (Saltford).—This is by a practical grower who has made a success of the business. No grower of violets can afford to be without it. 25 cents.

GREENHOUSE CONSTRUCTION (Taft).—It tells the whole story about how to build and heat a greenhouse, be it large or small, and that, too, in a plain, easily understood, practical way. It has 118 illustrations. $1.50.

GINSENG (Kains).—At the present time, when so much interest is taken in ginseng, it will be interesting to peruse this volume, which tells all about the plant in a way that all may understand. The 144 pages are freely illustrated. 50 cents.

YARD AND GARDEN (Baker). An excellent book treating on the method of making home gardens attractive. The author covers a wide range of subjects in quite an able manner and the book is full of interest for the amateur gardener; 140 illustrations, 420 pages, $2.

SUCCESS IN MARKET GARDENING (Rawson).—Written by one of the most prominent and successful market gardeners in the country, and who has the large t glasshouses for forcing vegetables for market in America. Outdoor and indoor crops are treated. Illustrated, $1.00.

LANDSCAPE GARDENING (Maynard).—The development of landscape art within the past few years compels the wide awake florist to keep posted on this branch of the business. The many suggestions of this book will be found helpful every business day. It contains 338 pages, 165 illustrations. $1.50.

THE GARDEN MONTH BY MONTH (Sedgwick).—A well classified list of hardy herbaceous and other plants arranged for each month in the year. Water plants, vines, ferns, foliage plants and others all have separate chapters devoted to them and a color chart is an unusual and extremely useful addition to a most carefully compiled and excellent book. Finely illustrated. $4.30.

Reservoir Vases

For Cemeteries and Parks

THE BEST MADE

The reservoir supplies the plants with moisture by capillary attraction.
Not necessary to water plants oftener than once in ten days.
We make nearly 100 styles, ranging in price from $6.00 to $10.00 each.

None better made. Send for catalogue.

THE ALLIED TRADES

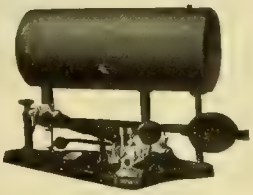
Largest Private Range in America.

George Sykes, Chicago manager of Lord & Burnham Co., New York, has returned to Chicago after being absent three weeks in New York, where he secured a contract for about $70,000 from J. B. Duke, president of the American Tobacco Co. for houses to be erected at Somerville, N. J. This will be the largest private range of glass in the United States and will be built with Lord & Burnham Co.'s improved curved eaves (no gutters or plates will be used at the eave line).

Mr. Sykes had all kinds of competition to meet, but he succeeded in getting the contract at an advance of about $12,000 above the next lowest bidder. Mr. Duke visited quite a number of places to examine other constructions before he placed his order, as he wanted the best. Lord & Burnham Co. built Mr. Duke a large show range about eight years ago so he has had ample time to try out the construction.

The new greenhouses will be equipped with all the latest improvements such as curved eaves, indestructible cast iron benches and self-oiling ventilating gear. The houses will be heated by hot water, using 3½-inch cast iron pipes and 2-inch wrought iron. Where side ventilators are required Lord & Burnham Co.'s improved wall ventilators will be used. These are made of iron frames and fitted with galvanized wire to keep out birds, squirrels, etc. A large workroom, 25x60 feet will be built in the center of range fitted with a private office, etc. A special feature of this building will be a fruit room fitted up after the English style. The rose and carnation houses will be of L. & B. Co. shadeless ridge type. This style of house is now being used by most of the leading eastern growers and is a great improvement over the full span or three-quarter span houses. The range will consist of 24 compartments in addition to the passage connection. The following is a complete list of the houses and compartments: One American Beauty rose house, two tea rose houses, two carnation houses, two gardenia houses, four melon houses, two orchid houses, two fern houses, two vineries, one peach house, one nectarine house, one tomato house, one orangery, two propagating houses, one chrysanthemum house. The cellar will be large enough to hold about 150 tons of coal, besides boilers, cool storage and mushroom house. All foundation walls below grade will be of stone concrete, the outside walls above grade will be of field stone to match the present buildings.

For The Greenhouse



MOREHEAD

Return Steam Traps

The present improved **Morehead Automatic Return Steam Traps** are the result of twenty years' use and development in thousands of heating and steam plants throughout the world. MARKET OVERCROWDED.

Business has decreased somewhat during the past week and the market is overcrowded. The Confederate Memorial day exercises were commemorated at a section in Arlington cemetery reserved by the government for this purpose, and many of the retailers had orders for various floral tributes for this occasion.

CLUB MEETING.

The June meeting of the Florists' Club took place at Gude's hall on Monday evening; owing to the absence of President Kramer, Vice President John Robertson officiated. Geo. J. Hess of Anacostia was admitted to membership in the club. The outing of the bowling team will take place June 25. Chesapeake Beach is the selected place. Wm. F. Gude praised the team for the good work done and congratulated the members on the many prizes they had captured. Mr. Gude further stated that he hoped we would have a repetition of our regular monthly outdoor meetings. He promised that he would be glad to repeat the outing which the florists enjoyed at his summer residence last year. After the adjournment Mr. Gude extended an invitation to the members to inspect his fine supply of roses and some other things which help to make life worth living. A vote of thanks was extended to him for his hospitality extended at both the previous and present meetings.

NOTES.

Z. D. Blackistone furnished the wreath used to decorate the graves of the unknown at Arlington cemetery. Geo. C. Shaffer received the order for the southern cross, which is similar in shape to the St. Andrew's cross, excepting that there are 13 stars on the red surface. It is surrounded by a wreath of Cycas revoluta. Three hundred bunches of flowers were used to decorate the graves of the Confederate unknown. Geo. H. Cooke executed the work. Mayberry & Hoover sent two wagon loads of flowers.

Many handsome floral tributes were sent to the funeral of Professor Bishop, who was a famous composer, although afflicted with blindness.

Geo. H. Comly reports better trade at his temporary quarters than he had at the original store. G. S.

CHILLICOTHE, O.—The Chillicothe Floral Co. has landed the contracts for the planting on the B. & O. railroad between Parkersburg and Cincinnati and the cemetery at Frankfort.

New Catalogue Now Ready

Our new 1909 Catalogue is now ready to be sent out, and you should have one of these. The book will be sent postpaid on request to anyone.

You should get our prices on heating pipe before you place any order.

CHICAGO

Fresno, Calif.

In his desire to see beautiful parks in this city, George C. Roeding has spared no money to accomplish this result and as a consequence the new portion of Roeding's park, consisting of 47 acres which was donated to the city, has been all planted out this spring. A year ago last March Mr. Roeding stated that he would donate $2,000 worth of plants for use in this new section, the contributions to be given at different intervals, not exceeding five years altogether.

The planting of the new section was started this spring and the park commissioners found it necessary to secure more than the portion which was to be given them this year. It was here that Mr. Roeding showed his desire for beautiful show places. Not only did he donate the $2,000 worth of plants this year, but he almost doubled this donation, and when all had been figured out, it was found that the plants given by Mr. Roeding and set out in the park this spring, amounted in value to over $3,600.

An Interesting Convention.

The sixth annual convention of the American Peony Society and exhibition originally announced for June 8-9 was postponed to June 11-12. Even at this later date there were complaints from growers that, on account of the backward season, their flowers were not out. It is to be regretted, considering the large hearted hospitality of President Ward and his most amiable wife, that more growers did not find it possible or convenient to exhibit. We offer no criticism on what was exhibited. It was no fault of the exhibitors that others did not show their enterprise, or, for the reasons already stated, were unable to exhibit. The unavoidable absence of President Ward, on account of illness, cast a shadow on the event. It must be stated, however, that Manager Brown and Mr. Matthewson of the carnation range, acquitted themselves nobly in their efforts to make both exhibitors and visitors feel at home. Carriages from the Cottage Gardens met every train coming from New York at Queens station and all comers were transported free of charge. In addition to this luncheons were served on each day of the exhibition.

Latest Portrait of C. W. Ward.

Elected Hon-President of Am. Peony Society.

It was very fortunate that, in the absence of President Ward, another good man happened along. This was Professor John Craig of Cornell University. We must not be misunderstood. All the members of the Peony Society are good men and women, but, in this as in other societies, a presiding officer who can have business done with neatness and dispatch and please everybody as Prof. Craig did deserves more than he is ever likely to receive. Prof. Craig had just come down from the nurserymen's convention at Rochester and being imbued with the spirit of conventions and likewise a man who only talks when he has something to say, he made a fine impression. The selection of the next meeting place has been left to a committee composed as follows: Secretary Fewkes, R. T. Brown, Cottage Gardens; and W. A. Peterson, Chicago.

At a preliminary meeting held early on July 11 Prof. Craig was selected as presiding officer and Messrs. Fewkes, Thurlow and Bryant were elected judges. At 4:30 p. m. the first regular business session of the convention was held. In calling the convention to order Professor Craig made an eloquent appeal for harmony and systematic

work in the interest of the society. In the absence of Pres. Ward the secretary read his address as follows:

President Ward's Address.

It is with extreme regret that I am compelled to announce my inability to be with our beloved society at its fourth annual meeting and to also announce that hereafter I shall be unable to take any laborious part or position with your or any other horticultural body. My connection with and labors among horticulturists have been most agreeable, pleasant and instructive and I would much like to continue them, but the condition of my health during the past year warns me that I must cut off all detail work possible and save my strength for tasks that I cannot avoid. I wish, however, to assure you all that my sympathy and support will always be heartily exerted in aiding all horticultural societies, not only in America but in other lands as well, in the grand works they have undertaken.

The work which the American Peony Society was organized to perform has been but fairly begun; some errors and omissions have likely been made, but these should not discourage you all in continuing the work already planned nor in planning additional work that experience shows to be needful, but we all should rather work with renewed vigor and a determination to accomplish all that which we set out to accomplish.

With the data at my command I am at this time unable to make many suggestions of value, but the work already mapped out should be continued to the end that American peony growers should have at least an authentic list of named varieties that will cover those most desirable for general culture on our continent, and that duplicate names should, as far as practicable, be eliminated from that list. Your nomenclature committee should be composed of able practical men who are willing and able to give it the necessary time, observation and attention.

ESSAYS.

There should be provided at each annual meeting two or three able essayists, who will cover subjects of interest to peony growers, both amateur and professional. Among the subjects that will likely prove of interest might be mentioned: "Cultivation of the Peony," "Propagation of the Peony," "Originating New Varieties by Cross Fertilization," "Commercial Peony Growing," "The Value of the Peony for Cut Flowers," "The Peony for the Amateur," "The Peony as a Decorative Plant," "The Use of the Peony in Landscape Gardening," "Peony Colors" (pointing out shades of color that are not desirable and not worthy of cultivation), "The Peony at Exhibitions" (illustrating best methods for keeping, shipping and staging peony blooms at exhibitions), and several other subjects that will suggest themselves as time passes.

THE CORNELL EXPERIMENTAL PLOT.

The Cornell experiment has not proved as successful as might be desired owing very largely to the unfavorable nature of the soil and the lack of continued culture and fertilization and the condition of the plants at the station is not such as to enable a correct study of the varieties nor to enable one to judge as to the value of different varieties. Some means should be adopted to provide for proper culture, fertilization and favorable said conditions, for until peonies can be observed under fairly favorable conditions the observations and the deductions therefrom will not likely prove of great general value.

ANNUAL EXHIBITIONS.

These should be held in localities where an attractive and effective exhibition of peony blooms may be assured, and at such seasons as would enable nearby growers to stage fine displays to good advantage. Substantial premiums should be offered under such conditions as will attract extensive entries and thereby assure fine displays and rules and regulations should not be so technical or severe as to discourage or drive away exhibitors:

Arthur H. Fewkes.

Secretary American Peony Society.

INTRODUCING NEW VARIETIES.

While the society should encourage the growers of new varieties and give ample recognition to all improvements of merit, it should carefully avoid the endorsement of the commercial value of any new peony, and its award should be of such a character as would prevent the use of the society's name in advertising worthless varieties or varieties that may be practically duplicates of kinds already existing in commerce.

In conclusion I desire to express my great gratitude to the members of the society for the uniform kind and courteous treatment they have one and all accorded me and for the generous assistance all have rendered the society as well as for the enthusiasm manifested in our work. I feel that I ought to apologize for the little time I have been able to devote to the duties of the office with which you have thrice honored me and to offer as the only explanation lack of sufficient strength to attend to them properly and at the same time care for the business duties which have crowded upon me and which could not be avoided. I feel certain that any one of your members whom you may choose as my successor will more ably fill the office than I have been able to do, and that under his guidance our society will prosper and accomplish the needed work. You all have my best wishes for success collectively and individually and I desire to express to each and every one of you my warmest friendship and sincerest wishes for a long, successful and happy career.

The secretary's report showed that the membership of the society was 54, with four honorary members. Mention was made of the death of E. V. Hallock, a member of the society. L. D. Batchelor spoke of the work being done at Ithaca and recommended that the society appoint a committee to cooperate with the officials of the college in relation to nomenclature and other matters. F. R. Pierson spoke in approval of Mr. Batchelor's suggestion and a committee was appointed. B. H. Farr, chairman, made a strong appeal for the support and co-operation of members of the society. On motion the convention adjourned to meet June 12 at 10:30 a. m.

Election of Officers.

At the Saturday morning session officers were elected as follows:

B. H. Farr, Reading, Pa., president.

C. J. Maloy, Rochester, N. Y., vice-president.

J. H. Humphreys, Germantown, Pa., treasurer (re-elected).

A. H. Fewkes, Newton Highlands, Mass., secretary (re-elected).

The treasurer's report showed a balance on hand of $483.89.

Professor Sanders of Hamilton College, Clinton, N. Y., was elected a director to serve three years, succeeding Theo. Smith. On the suggestion of Prof. Craig, C. W. Ward was elected honorary president of the society. New members were admitted as follows: L. H. Harsatt, W. P. Dykes, Henry Hicks, J. J. Starr and Emma Embray. The committee on resolutions reported a vote of thanks to Mr. Ward for his hospitality and generosity, with regrets as to his delicate state of health and hope for his speedy restoration. In the report a resolution was also embodied expressing regret and sorrow for the death of E. V. Hallock.

President-elect Farr made a brief address, pledging his best efforts for the good of the society and asking the co-operation of members. It is but simple justice to state, in closing this report, that, leaving out the flowers entered for competitive exhibition, the growing and flowering peonies at the Cottage Gardens were by themselves a magnificent exhibit. A field of peonies, 8 or 10 acres in extent, comprising the best of all varieties, is not often seen. The show at Cottage Gardens was a fine education for the members of the Peony Society.

Awards.

Commercial Classes, Double.

Largest and best collection of varieties, one flower each.—B. H. Farr, Reading, Pa., first; Geo. H. Peterson, Fair Lawn, N. J., second.

Collection of 12 best and most distinct varieties, six flowers each.—Geo. H. Peterson, first; B. H. Farr, second.

Collection of varieties in various shades of rose pink, three flowers each.—No awards.

Collection of varieties, salmon and flesh colored, three flowers each.—B. H. Farr, second.

Collection of white varieties, three flowers each.—Geo. H. Peterson, first; B. H. Farr, second.

Collection of crimson varieties, without stamens, three flowers each.—Geo. H. Peterson, first; B. H. Farr, second.

Collection of crimson varieties, with stamens, three flowers each.—B. H. Farr, first.

Collection of tricolor varieties, including flowers with guard petals, collarette and center petals of different colors, three flowers each.—B. H. Farr, first; Geo. H. Peterson, second.

Fifty blooms, white.—S. G. Harris, Tarrytown, N. Y., first.

Fifty blooms, dark pink or rose.—S. G. Harris, first.

Amateur Classes.

Best and largest collection of white varieties, one bloom of each variety.—Albert Lahodny, gardener to Theodore A. Havemeyer, Hempstead, N. Y., first.

In these classes there was practically no competition, Albert Lahodny, in addition to the above, taking first prizes in several other classes.

Special Mention.

B. H. Farr, collection of peonies; John Lewis Childs, Floral Park, N. Y., iris and gladiolii; Geo. H. Peterson, collection of peonies.

SECRETARY FEWKES' report appears on page 1058.

THE RETAIL TRADE

Good Newspaper Advertising.

One of the principal points to study in newspaper advertising is to catch the eye of the reader and drive home the point it is intended to emphasize at once, and on the accompanying reduced reproduction of an advertisement in the Kansas City Journal by the Alpha Floral Co., Kansas City, Mo., this has been done. The carnation is there, the word "free" (always a drawing card) is plain, and the reader at once looks to see what he is to get free. His attention once gained the rest is easy, and the next step is to the reading matter which accompanies it and which, as it is explanatory of the whole deal, we quote. The whole comprises a neat little advertising stunt that is suggestive to others:

CARNATIONS FREE TODAY.

"Today is the Alpha Floral Company Carnation day and every caller at the store, 1105 Walnut street, will be given a choice carnation in order to commemorate the seventh anniversary of this aggressive business house. It seems indeed a short time since the young man, Alpha Elberfield, started selling flowers on Petticoat lane, but the customary great gap between a humble flower stand and his present fine establishment has been rapidly bridged only by a remarkable degree of business ability and perseverance. The motto, 'We strive to please,' backed up by sincere effort to do so, has spelled success in large letters."

Orchid Bride Bouquets.

SEE SUPPLEMENT WITH THIS ISSUE.

The wide-spread popularity of cattleyas somewhat overshadows the many other beautiful orchids in general decorations, but in bouquet making, if a graceful and telling effect is to be produced, other varieties and species must be added. Cattleyas of the labiata section alone, no matter how well arranged, are inclined to be flat in effect and there is also a good deal of sameness in their color. Old time florists will recall in this connection the pretty Oncidium flexuosum with its light, airy scapes of pure clear yellow flowers on wiry spikes and individual flower stalks so light that they were almost invisible at a little distance. It was seen in almost every bouquet and epergne decoration in the old days, and it is doubtful if there is a more elegant little flower in existence for the purpose today.

Other oncidiums that occur to mind as suitable for this class of work—that is to stand up from the body of a bouquet, are O. incurvum, a pretty pink flower, O. phymatochilum (dancing girls), O. ornithrynchum and its white variety and O. altissimum and O. sphacelatum, the two latter bright yellow with brown markings. All these oncidiums last extremely well, are very bright and telling and easy to handle. For associating with cattleyas some of the larger flowered yellow oncidiums are fine, such brightly tinted species as O. tigrinum and its varieties, O. Marshallianum, O. varicosum and the pretty little O. concolor being among the best of these. The phalænopsids, or moth orchids, are exquisite for the purpose, especially P. amabilis, P. Schilleriana, P. Stuartiana and P. grandiflora. These beautiful species, obtained fresh and used while still in good condition, are among the choicest and most suitable species for the purpose in the entire orchid family.

The epidendrums are to some extent looked down upon by orchid growers, yet this genus comprises some elegant species for cutting. Bright scarlet orchids are by no means common, but in Epidendrum vitellinum and its variety majus we have flowers only rivaled in their richness of coloring by the glowing Sophronitis grandiflora, the brightest colored commercial orchid in existence. Lælia harpophylla and L. cinnabarina are other orchids possessing this color. Harking back to the epidendrums, what could be more beautiful than E. bicornutum a waxy white flower, lasting long in perfect condition, but, unfortunately, not easy to grow and, for this reason, not likely to ever become very popular? In their season the deciduous calanthes are among the best and showiest orchids for cutting and well suited for use in bouquets. C. vestita has white flowers with red (rubra oculata) or yellow (lutea oculata) blotches in the center. C. Veitchi has pink self-colored flowers, and there are many varieties of each. These beautiful species and hybrids are at their best during November and December.

There are hosts of other orchids, dendrobiums, cypripediums, vandas cœlogynes, odontoglossums, miltonias and many others all more or less useful for the purpose indicated and flowering at all times of the year. Retailers who have this class of work on hand should get after their growers and try to get them in line to keep up a regular succession of these flowers. It is easily done if they will take the trouble to do it, and the demand, already existing, would in a year or two be doubled. For use with orchids no fern or other green can compare with Adiantum Farleyense. The soft green of the fronds and its full yet graceful appearance seems to suit the somewhat neutral tints of most orchids, especially the soft mauves and yellows, and it should be used freely. Small sprays of Asparagus plumosus, stemmed and used among the smaller flowers are also exquisite and very fine fronds of Adiantum gracillimum placed over cattleyas and other large flowering orchids are like a light veil over a beautiful face, partially concealing while it heightens its beauty. This latter must not, of course, be overdone or the effect will not be good.

GOOD NEWSPAPER ADVERTISING.
A Kansas City Retailer's Anniversary Announcement.

Narcissus Albus Plenus Odoratus.

This was the most generally used bloom for Whitsuntide decoration in England. Combined with Tulip Gesneriana the effect was just right—scarlet below the white. The fragrance is almost too much for church decoration. Not for some years has the double white narcissus been in better form, the rain just coming right for it. S.

Needs the Florist.

ALTHOUGH 10 YEARS IN THE TRADE.

Some time ago I sent $1.00 for subscription to THE FLORIST. You wanted reference to prove me in the trade. I need the paper badly. Have been in the business for 10 years and herewith mail you references. If you are still skeptical write 'em.

C. O. HASSERIES.

THE ROSE.

COQUINA, a new rose pink single variety, is highly spoken of in the European papers and received an award of merit at the recent Temple show in London.

KEEP the weeds down in the rose benches, especially where young stock is planted. Green-fly and other insect attacks often have their origin on the weed growth.

Cultivating Roses.

ED. AMERICAN FLORIST:—

Are roses cultivated just after being planted or all the season through?

INEXPERIENCED.

The various cultural details have to be kept up all through the season. See the notes that appear regularly in THE FLORIST for particulars.

Treatment and Culture of Roses.

A paper read by Isaac Kennedy, West Park, O., before the Detroit Florists' Club, June 7.

CONTINUOUS FLOWERING OF ROSES.

When your honorable fellow member, M. Bloy, informed me a few days ago I was scheduled for a paper on rose culture, for June 7, it nearly took my breath away. I was under the impression that the question of rose culture had been thrashed out so thoroughly by our most expert growers that there was little left unsaid. However, I will do my best and endeavor to point out a few little items on growing tea roses that have come under my observation within the past few years; notably that of blooming tea roses continuously on benches for a number of years without drying off or resting. Mine have been growing and blooming continuously for over six years, practically without rest, and they are better this year than they were the first year planted. We get along so well together that I intend to keep them in at least one year more, which means a few more extra strips under the benches; as it is, we have the braces now about a foot apart.

These few remarks are not intended for culture on a large scale, except in regard to the cuttings; furthermore, it is not intended for those who grow American Beauty, Richmond and other hybrid teas, as the method of culture for these differs from that of the tea varieties. These remarks are intended for the small grower who grows a few teas for his own use or wholesales in a small way and cannot afford to plant every year.

WOOD FOR CUTTINGS.

The first and most important item is the selection of the cuttings. Most growers select cuttings from flowering wood; I don't; I prefer the little blind shoots that spring out from the flowering wood, commonly called heel cuttings, or, as a friend of mine remarked, "Those little devils with the hundred eyes."

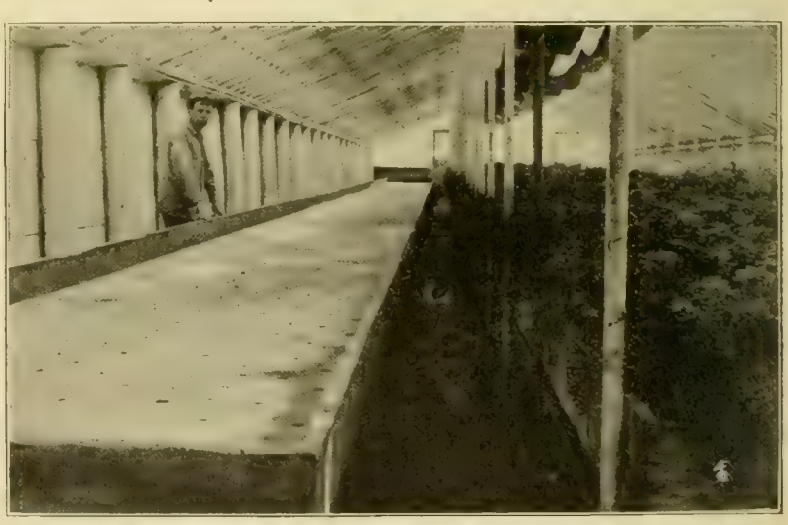
When taking the cutting, trim the foliage off a little and cut away the jagged end that still adheres to the shoot, as nearly square as possible; put them in the cutting bed (any good bank sand will do), give them plenty of water with a bottom heat of about 60° and top heat a few degrees less, and in three or four weeks these will be as fine a bunch of cuttings as one could wish to look at, with roots standing out like an open parachute, and as stiff as the ribs in a $10 umbrella. Be sure to get the cut as square as possible; in no case ought a tea rose cutting be cut on a slant. The cuttings ought to be put in the sand not later than December for use the following year. When rooted, pot into 2½-inch pots and keep on the cool side until spring, by which time the plants will have become almost pot-bound. Instead of giving them a shift into a larger pot, plant them out in the open ground, taking care not to disturb the ball, and in a short while you will soon see those little "lads with the hundred eyes" assert themselves and make splendid stocky, hardy plants, which, when lifted and planted in the houses in July or August, will be a thing of beauty and a joy all winter.

OUTDOOR GROWN PLANTS.

The outdoor treatment has built up a good strong constitution which will better stand the forcing treatment during the dull months than those grown inside entirely. The idea in keeping the ball intact when planting out is to obviate the danger of serious shriveling when transplanting into the benches. When planted they will require frequent syringing until established. The question of soil, to my way of thinking, does not cut so much of a figure as formerly; any good strong soil will do, not necessarily sod. It is the after treatment that counts. My reason for making the above assertion is the fact that my roses have not had a change of soil for six years, with the exception of an inch or so of top dressing every fall.

In regard to watering, I would say but always after the beds have received a thorough watering with clear water. We also add a little lime about once a month to the water, which has a tendency to keep down eel worm, if there are any indications of it in the soil. In regard to temperature: If the soil is very heavy the plants will stand a night temperature of 60° and a day temperature of a few degrees higher. If the soil is inclined to be light or gravelly, I would not advise higher than 56° at night, as the constitution is more liable to weaken in a light soil than a heavy one. The bone meal we apply about once every two weeks and work it into the soil. We never use a mulch of any kind on the beds, as it is impossible to determine what part of the bed is dry or wet, when a heavy mulch is used.

Be sure and keep down green-fly and spider; syringe the plants when they need it; even if the day should be cloudy, syringe early and the plants will be alright by evening, with a little extra steam heat and air. Don't wait for a bright day and let the spider get the best of you. Keep the above treatment up all winter and when April comes we must begin to prepare the plants for their summer siege. The following is our way: We gradually lower the night temperature in the houses until the plants will stand 10° below the normal without danger to the proper development of the flowers. Then we cut away all surplus wood, keep them a shade on the dry side until the new breaks appear, after which we give a thorough watering with an application of blood liquid and off they go again on their summer cruise. During the summer months we apply less blood and more bone meal; about August we rest them up



THE WITTBOLD CEMENT BENCH.

the plants should never suffer at any time for the want of it. To know they have had enough is to see it run through the bench like through a sieve. It is the continual little dabs that sour the soil, never thorough waterings.

FEEDING.

The question of feeding comes next. We apply nothing but blood, pure bone, (not the steamed variety), and liquid manure. The blood we apply in liquid form along with the cow manure, for about 10 days, go over the thinning out process, and, as I said before, apply about an inch or so of fresh soil, tie them down and start them off again for the winter. The shoots that come from the bottom of the heel cuttings will make practically a new plant each year. In conclusion I would say that it is absolutely necessary to keep a little sulphur on the pipes at all times during the winter months, and be careful of drafts on the plants during summer.

Bench Construction for the Rose House.

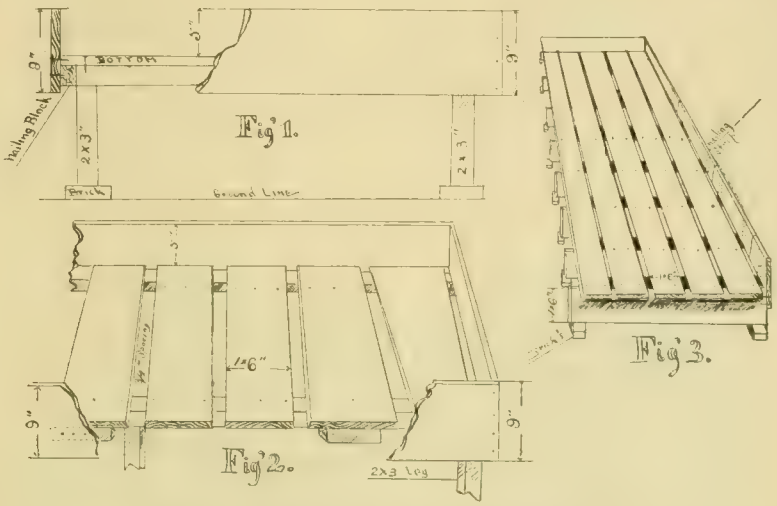
TWO USEFUL WOODEN BENCHES.

In order to have our benched stock of winter-forcing roses do their very best, it is essential to have properly constructed benches under them and, in the illustration here presented, we have two styles of bench construction which we have found to be satisfactory all around and a practical method of building insuring plenty of drainage and so constructed as to give long life to the lumber. In Fig. 1 is shown the raised bench that can be made any height desirable. The face boards are 9x1-inch cypress, dressed on outside; the bottom boards are 1x6-inch, spaced ¾ of an inch apart; the legs are 2x3 Georgia pine or cypress, spaced four feet apart on centers, resting on brick foundations at the bottom, raised so that the wood does not touch the ground. Small cement piers under each leg 5 inches square makes the best foundation, and a stringer laid on these of 2x3 scantling, laid flat side down, running parallel with the top stringers, will greatly add to the appearance of the benches, as well as strengthen them, and they will last longer.

It will be noticed that in Fig. 1 there is a nailing block coming between the face board and stringer; these blocks are placed at the joints and spaced four feet apart, and they help very much to stiffen up the facing. The bottom boards extend beyond the stringer two inches, and the nailing blocks being about eight inches long, cut from 2x3 stock, when nailed on the stringer the 2-inch way, come fair with the bottom boards so that the sides can be nailed to both. Fig. 2 represents the side elevation of this bench. The sides of both benches. Fig. 1 and Fig. 3 extend five inches above the tops of the bench bottom, allowing in other words five inches of soil to plant in which we have found to be about right if packed quite firmly when being filled.

Fig. 3, for a low bench, is very economical and durable, the bottom being supported by 1x6-inch cypress resting on small piers or bricks; the edges of the supports cover so little wood when the nailing surface is only an inch that the life of the bench is greatly prolonged, and to gain head room we find this style of bench very useful. The supports should extend ¾ of an inch beyond the two outside bottom boards, to allow for drainage at the sides, and by nailing a strip on each side of the supports at the joints of the facing and eight feet apart, as shown by the dotted lines (Fig. 3), this will keep the sides from warping and stiffen the construction throughout.

Benches of this construction we have had last seven years with slight repairs, and these benches were constructed of common cypress. If pecky cypress had been used undoubtedly the life of the benches would have been extended several seasons longer. The benches should be washed thoroughly after removing the soil, and as soon as they become dry apply a coat of lime wash while hot; otherwise the benches will decay much more rapidly. One advantage the raised bench (Fig. 1) has over the other is that it allows for bottom heat, as the pipes can be easily supported under them by nailing a crosspiece 1x3 inches at every other post, the posts, of course, being opposite each other, the heat keeping the bottom boards much drier. At the same time the low bench has been constructed so as to absorb the least possible amount of moisture, and both will be found to give good results in every way. E.



BENCH CONSTRUCTION FOR THE ROSE HOUSE.

Two Useful and Lasting Wooden Benches.

Concrete Benches for Roses.

Without a doubt concrete benches are here to stay. As far as the writer has had opportunity of observing in other places, there has been no single instance when they have been put in and have not turned out satisfactorily while, as far as our own experience counts, we have had perfect results with them. There are always to be found people who will run down anything new no matter how good it is. Such people say that the wooden bench was good enough for their fathers and should be good enough for them as it has always grown good stock. But the man who thought his old boat was safe was drowned. There are circumstances under which the wood bench may be chosen especially when lumber is cheap and to hand while freight rates on cement are high. But we think we are well within the mark in saying that in the great majority of cases concrete benches are better, because more lasting and needing no repairs. Certainly good roses, quite as good as the best produced on wood benches, can be grown on concrete and after all this is the main point at issue.

There has been quite a little discussion among growers as to the merits of a movable bench over a permanent one. Readers of Dickens will remember Mr. Dick's reply to a criticism on his room to the effect that one "couldn't swing a cat round." The chronicler with whose work King Charles' head so interfered very naively remarked that he "didn't want to swing a cat." And so it is with the cement or concrete bench. With a properly planned bench system under a well constructed, lasting roof the probability is that the benches once fixed will remain in place for a number of years, as long as the house lasts. Why then go to more expense in erecting temporary benches or benches in movable sections? Personally, all things considered, and unless there were very good reasons for a movable bench, we would be strongly in favor of a concrete bench made in permanent form, for all large and medium sized establishments.

COMMERCIAL.

House for American Beauty Roses.

ED. AMERICAN FLORIST:—

Will you be so kind as to tell me what height a greenhouse should be if it is 40 feet wide and 150 feet long to get the best results out of the north benches? Please state how high the side walls should be, also the height of ridge. Also tell me the number of 2-inch pipes it will take to heat it with hot water for American Beauty roses and best width for benches.

A. B.

The height of the greenhouse will vary somewhat with the arrangement of the beds or benches. In most cases it would answer if the walls are six to eight feet above the level of the walks and, for a house of this width, the ridge should be 18 to 20 feet high, according to the height of the walls. In arranging the piping it will be well to use two 3-inch mains upon the walls and four 2½-inch flows distributed through the house. It will then require twenty-four 2-inch pipes for the returns. Six can be upon each of the walls to be supplied by the 3-inch mains. The others can be in four coils of three pipes each, and connected with the 2½-inch flow pipes. A house 40 feet wide will accommodate six beds four and one-half feet wide. It will be well to have two of the walks two feet wide, but 20 inches will answer for the others. L. R. T.

ALLENTOWN, PA.—E. Kroninger is building two new houses of Lord & Burnham Co.'s construction, each 50x 400 feet. All the latest improvements in construction are being installed.

VINCENNES, IND. W. A. Reiman complains that people ride out to his peony farm in automobiles and carriages and steal the flowers. People who can afford automobiles, he thinks, ought to be able to pay for what peonies they want.

Secretary Fewkes' Report.

The present membership of the American Peony Society, not including four honorary members, is 54. We have lost during the year one member by death, E. V. Hallock, who joined the society at the last meeting at Ithaca, N. Y. Although his membership was of short duration, his loss will be keenly felt, for his horticultural attainments and genial personality made him a most valued member.

The work of the nomenclature committee is progressing. The peony bulletin published by Cornell University was issued early in the year and distributed to members. It contained the Coit essay on the peony and a partial descriptive list of varieties. This list forms the beginning of the official catalogue of the society. In his introductory note Professor Craig says: "It is to be regarded as a preliminary step, and therefore subject to modification in the light of future experience." I will therefore say without other authority from the chairman of the nomenclature committee that these descriptions are submitted to you for your approval or criticism, both as to method and accuracy. If they do not meet with your approval it is suggested that your objections be communicated direct to Professor Craig or his representative, Leon D. Batchelor, as it is through a frank expression of opinion on these matters that the best results will be obtained.

In connection with the nomenclature work the question suggests itself to me, whether, as individual members, we are doing all we can to further the work of the committee? It certainly is not enough for us to simply send our collections of roots to Cornell and expect the confusion to be straightened out there by the committee, while we keep on selling and distributing doubtful varieties under the names we happen to have attached to them. We should cease being too confident of the accuracy of our own list of names unless we have taken extraordinary means for proving them to be correct. For instance, if some of us have invested in the Lady Alexander Duff "gold brick" we should not pass it along as the true thing, but sell it upon its own merits if we are fortunate enough to have received one of the few good ones out of the dozen or more varieties sent here, for it then solves the problem, as one member at least has done, by advertising it as having been received for the true variety, but expressing a doubt of its accuracy, while giving it full credit for quality.

There are many other varieties of uncertain identity which should be treated in the same way, and if we are to be consistent members of the American Peony Society, some such course as the above should be followed. Another matter which should receive attention at this meeting is the premium list for our exhibitions and the ways and means of providing for it. The exhibitions form an important adjunct to the meetings, and some special provision should be made whereby prizes can be offered and paid without making too heavy demands upon the treasury. The exhibition at the last meeting at Ithaca was a fairly good one, but was made principally of flowers cut from the test collections: T. C. Thurlow Co., West Newbury, Mass., and Professor A. P. Saunders, Clinton, N. Y., were the only other exhibitors, and great credit is due them for making so good a showing of blooms. The former entered in the commercial and the latter in the amateur classes.

Peonies at Western Springs, Ill.

The first lot of peonies at Vaughan's Nurseries, Western Springs, Ill., was planted four years ago. Since then, under the direction of Carl Cropp, the varieties have been trued up, the plants thoroughly cultivated and other novelties and choice sorts added yearly until now it is a superb collection. In the new soil the plants have made wonderful progress and just now they are a magnificent sight, acres of lovely blooms that look exceedingly well en masse and grand flowers that will repay close inspection individually. An hour or two spent among them recently, under Mr. Cropp's guidance, was most interesting and pleasant and quite an education in peonies. As for the genial Carl himself he has the peony in his eye and it is with him in his sleeping and waking hours while thoughts of peony synoyms, big blooms and the merits of the Dutchmen and Frenchmen as peony raisers haunt his dreams. No one who has not had actual experience along this line can imagine the amount of work necessary to straighten out the names and keep all true in a large collection but so carefully has this been done each season that there is a very small proportion of rogues present and these are immediately marked to be taken out when lifting time comes around. Great quantities of fine flowers are now being cut and shipped to the Chicago and other markets and there are many thousands of late buds that will carry on the work and the display for sometime yet, though peony lovers who wish to see them at their best should hurry up and accept the firm's invitation and get transportation from Chicago to Western Springs.

Respecting the varieties these are almost endless and we make no attempt at describing them all, simply noting a few that, at the time of our visit, were showing good form and appeared of exceptional merit. First of all the grand old Festiva Maxima must be noted. It is grown in immense numbers and there are plants of all ages. This is one of the finest, if not the finest, of the white varieties for cutting and the great favorite on the Chicago market. Delicatissima is another old favorite, a pretty rosy pink of fine form, the flowers coming on good stiff stems and lasting well. Of deeper color and an exquisite peony is Lady Leonore Bramwell; the fragrance of this is very distinct and Mathilde Mechin is a new ball shaped flower and one of the finest pink peonies in existence. Mme. Breon has the outer petals pale rose with center petals yellowish, a pretty flower. The old reliable Edulis Superba is another of the finest for cutting and a good light red with strong stem. Mons. Jules Elie is a splendid large flower of grand shape, strong stem and exquisite rose color. It is exceedingly free and a fine grower. Faust is a lovely pink, like a Malmaison carnation. M. Boucharlat has also yellowish or chamois center and like Triomphe Gandavensis is a very good lawn peony. Mme. Ducel (Modele de Perfection of some growers), is a grand light pink without a fault and Jeanne d' Arc is a distinct and pretty variety very full and a profitable one to grow. Mme. de Verneville is a lovely thing, the flower very full in the center, rosy white with crimson streaks on the middle petals. Modeste Guerin is a pretty two-shaded flower, carmine and light rose, a tall grower with excellent stems and Felix Crousse is another desirable form. Mme. Bucquet is a very deep red and the old Officinalis is also largely grown. Queen Victoria, Couronne d' Or, Duchess de Nemours, Mme. Calot, Louis Van Houtte, Rubra Triumphans, Lee's Rubra Grandiflora (a splendid late red), Delachii, Pulcherrima and many others are to be seen in this fine collection which is well worthy a visit from all peony lovers.

The Temple Show.

The Royal Horticultural Society of England just held its twenty-second flower show in the historic Temple gardens. Rumor has it that it is the last show of this kind that will be held in these gardens. The Royal Horticultural Society is now financially richer than ever it has been before in its 105 years of existence, and is in no humor to put up much longer with the petulant complaints that are incessantly being made both before and during the show by the Temple garden authorities. However, much may happen in 12 months, and both parties may see their way to having the show just once more.

As an exhibition, there is no more to be said than in previous years. Every available inch of space has been filled in past years, but this year, perhaps a little more space was devoted to the outdoor exhibits. Unfortunately each day of the show was wet. There were about 130 exhibitors altogether from all parts of the United Kingdom also a few from Belgium and Holland. The most noteworthy groups of plants consisted as usual of orchids, roses, American carnations, hardy perennials and alpines, begonias, gloxinias, cinerarias, ferns, caladiums, azaleas, tulips, streptocarpuses, clematises, ornamental trees and shrubs, with smaller displays of fruits and vegetables grown on intensive principles. The most important exhibits were naturally made by trade growers, who usually reap a good harvest at this show and are prepared to spend money in putting up a worthy exhibit. Amongst the orchidists were such well-known firms as Sander & Sons, St. Albans, and Hugh Low & Co., Bush Hill, both of whom had magnificent groups. The accompanying photograph shows a glimpse of Sander & Sons' group. It was a model of perfection so far as staging was concerned, and it is difficult to beat this veteran firm in matters of tasteful arrangement. Odontoglossums of rare color and luster, fine oncidiums and laelio-cattleyas, cypripediums, wreaths of phalænopsis, numerous dendrobes, etc., formed the striking features, while a noble specimen of Cyrtopodium St. Legerianum (seen to the left in the picture near the pole) crowned the highest point in the center of the group.

Carnations were very much in evidence, amongst the exhibitors being a new one called the American Carnation Nursery, who competed with such well-known people as Cutbush & Son, W. H. Page, H. Burnett, R. W. Bath, C. W. Breadmore, H. Mortimer, C. Englemann, Hugh Low & Co. and A. F. Dutton. The flowers were all charming and included Robert Craig, White Perfection, Enchantress, Lady Coventry and Britannia. Rhododendrons from John Waterer & Sons—notably their ever lovely Pink Pearl—and Ghent and American azaleas from Cuthbert & Son, were quite up to the standard of previous years and attracted numerous customers. Caladiums are apparently losing ground, the most notable exhibit this year being from John Peed & Sons, Norwood, who had some real champions in their group. Although fallen on evil days the old firm of Richard Smith & Co., of Worcester, came up smiling once more with large flowering clematis, and was well backed up by another old firm, Jackman & Son, of Woking who did some wonderful things in the way of training their plants into pyramids, globes, etc. The tuberous begonias were finer than ever—if that were possible. Some curious ragged-flowered hybrid begonias were shown by an amateur, Frank Doyd of Croydon. They were of various hues between scarlet and white and were by no means unattractive. Indeed it is possible that with the changing fashions the very irregularity of the blossoms may appeal to many.

Ferns were shown in profusion by May & Sons, and Hill & Sons, both firms of good standing from Edmonton, some of the American forms of nephrolepis being particularly charming. Roses of course, next to orchids, constitute one of the chief features and in addition to such well-known growers as the Pauls of Cheshunt, and of Waltham Cross, Geo. Prince of Oxford, Chas. Turner of Slough, Cutbush of Highgate, Smith of Worcester, Frank Cant & Ben Cant, both of Colchester, Geo. Mount of Canterbury, Hobbies of Norfolk, we noticed Cannell of Swanley with a group of small rambler roses and a new hardy American Pillar with large single crimson flowers having a white center.

Sweet peas become more and more popular each year and on this occasion there were some fine exhibits from such firms as Dobbie & Co, Rothesay, Breadmore, Winchester, E. W. Knight & Co., Coggeshall, H. J. Jones, Lewisham, R. Sydenham, Birmingham, J. & A. Clark, Dover, G. Stark & Son, Ryburgh, and R. Chaplin, Waltham Cross. Amongst the varieties shown were White Spencer, Geo. Herbert, E. J. Castle, Mrs Collier, Lord Charles Beresford, Evelyn Hemus, Princess Juliana, (a pale primrose, named after the Dutch princess).

Of herbaceous and alpine plants there were some 40 to 50 exhibitors from all parts, and naturally there was a good deal of repetition in the species and varieties shown in such great profusion. The most noteworthy new plants were Primula Forresti and P. Bulleyana—both lovely yellow kinds from China, shown by Bees, Ltd., Liverpool. Amongst special groups, mention should be made of Sutton's begonias, gloxinias, star cinerarias and nemesias. Outside the tents in the open air, were some of the most tasteful exhibits in the show. They consisted for the most part of ornamental trees and shrubs. There were also several groups of topiary work, box trees and yews being cut into various fantastic shapes. Pigmy trees from Japan were also in evidence and still appear to attract some attention. But perhaps the chief features of interest in the open air were the tastefully arranged rock gardens. This style of exhibit is now popular not only at the Temple but at some of the large provincial shows, and considering the great cost of carriage of stone and material, it evidently pays to go to the trouble and expense of erecting artistic rockeries wherever sufficient space can be obtained. W.

F. SANDER & SON'S GROUP OF ORCHIDS AT THE TEMPLE SHOW.

THE VIOLET.

Notes in Season.

In the rush of spring work do not neglect the young violet plants outside. Keep the surface of the soil well stirred from the very beginning of the season, and remember that a dust mulch is as good or better than one of other material and that plants so protected will stand a lot of hot, dry weather. Though not generally so considered we believe that weeds are a blessing to the grower. Plenty of small weeds necessitate a lot of cultivation and that is what the plants require. Watering may sometimes be necessary. Fertilizer may or may not be required, but a continual stirring of the surface soil is the prime factor in the successful culture of all outdoor crops. The wide-awake man will accomplish more on poor land, without water or manure, than the sluggard on the best of soils.

The runners have not started much yet, but when they appear they should be promptly cut (not torn) off. For this purpose we use an ordinary edge cutter such as is used for edging flower beds and lawns. See that the edge is sharp, likewise your eyes, and a lot of backaches, and perhaps some language as torrid as the July weather can be saved. With the single varieties the above is about all that is required until the time comes to bench, usually in October. But although the task is simple, see that it is done when required. A little neglect now will surely spoil the prospects of a profitable winter crop. If Mrs. Smith's geranium bed and the violets need attention the same day, don't neglect the violets, that's all.

WHITE VARIETIES.

The only commercial white now in cultivation is Swanley White—a double variety. This is but little grown for the reason that it is as difficult to handle as all the varieties of the Marie Louise type, and also that, as ready for sale, it is usually far from white. The long time required to open a double flower nearly always results in the blooms becoming badly discolored before they are matured. In singles the White Czar is too small for commercial purposes, but we think all will agree that a white approaching in size and freedom Princess of Wales would be a decided acquisition. A single violet opens its flowers so quickly that they can be used while still white. In the choicest of work and for the best trade a real good white violet is needed. For a number of years there have been rumors of such a variety, but careful investigation reveals nothing but mere rumors. Once we traced the will o' the wisp to the king's greenhouses at Sandringham, but on inquiry the head gardener had not heard of it. Some day such a variety will make its appearance and will receive an enthusiastic welcome. Who will be the lucky, or rather the persistent, grower to give it to us?

VIOLA.

HERINGTON, KANS. Chas. Rissmon is building a large greenhouse.

COLORADO SPRINGS, COLO.—A terrific hailstorm struck the town June 11, doing considerable damage to several establishments.

WAUKEGAN, ILL.—Theodore Meyer had an excellent Decoration day trade, geraniums being in great demand. He has an excellent stock of hydrangeas with 20 or more flowers on each plant. The entire place is in fine order as always is the case here.

American Association of Nurserymen.

Rochester Convention a Record Success. Nurserymen Go to St. Louis Next Year.

OFFICERS FOR THE ENSUING YEAR.

F. H. Stannard, Ottawa, Kans., President. | Geo. C. Seager, Rochester, N. Y., Sec'y.
W. P. Stark, Louisiana, Mo., Vice-Pres. | C. L. Yates, Rochester, N. Y., Treasurer.

Seeing the Flower City.

After the morning session of the American Association of Nurserymen on June 9, as reported in our last issue, the 400 visitors and friends had a most inspiring and enjoyable trip about the Flower City, visiting the principal parks that have made it famous and attending a band concert in Highland park, where the photograph was made from which the illustration on page 1061 was made. From Highland park they were taken to Genesee Valley park and did not return to the convention quarters at the Hotel Seneca until 6:30. Several cities were suggested for holding the convention in next year, St. Louis and Denver being the principal rivals, the former eventually winning out.

It was planned to have State Commissioner of Agriculture C. A. Pearson deliver an address, but he did not reach the city. During the day there were insistent calls on the long-distance telephone for him, but he could not be located. In the afternoon Secretary Seager was notified that Mr. Pearson had been stopped at Canandaigua early in the morning by a telegram from Philadelphia to the effect that, through an accidental break in a gas pipe in their home, his mother and brother had been overcome by gas on Tuesday night, and his mother was not expected to live. Mr. Pearson at once left the Rochester train and proceeded on the next train to Philadelphia.

President Brown's Address.

THE CONVENTION CITY.

You have already been warmly welcomed to my native and home city, yet I cannot refrain from telling you how very happy the western New York nurserymen are that you decided at Milwaukee to honor Rochester, the cradle of the nursery industry, with your convention this week. Those who attended the last meeting here some 26 years ago, at which time Wm. C. Barry was your president, and who have not kept in touch with Rochester since that time, will hardly know her. We have now one of the three cities of the first class in the Empire state. We have here all the advantages of the larger cities. We have what every city must have to prosper, our full quota of public spirited citizens.

Rochester has not been standing still any of these 26 years. Yet it is but within the recent past that she has fully awakened to her possibilities. It remained for a young man from out of the far west to shake us up as we had never before been shaken and to point out to us what we have here. Sidney R. Clarke came to us from California as secretary to our chamber of commerce. He set the wheels all agoing. Among other things he suggested that we as a city collectively and individually adopt the motto, "Do it for Rochester." This suggestion was enthusiastically endorsed and every man, woman and child has been consistently "doing it for Rochester" ever since. I would suggest that when you return to your homes you promulgate this doctrine. Adopt this slogan, "Do it for Fredonia." Do it for whatever your home town name may be.

F. H. Stannard.
President-elect American Ass'n of Nurserymen.

We are proud of our city, proud of her position among her sister cities, proud of our parks and boulevards. We have hundreds of acres of beautifully developed parks, affording opportunities for rest and recreation to all our citizens and playgrounds for our children. We are proud of that great captain of industry, George Eastman, of kodak fame, through whose business ability and generosity Rochester has greatly profited and who, in conjunction with that other public minded citizen, Dr. Durand, has just given Rochester 500 acres on the lake shore. This will soon be one of the finest parks in the country.

We are not going to keep you indoors much. We want to show you Rochester and let you decide if she deserves the name, the Flower City, and also whether or no she is a good convention town. I shall endeavor to make a record for brevity in my remarks because we have with us many excellent speakers who will occupy the short time at our disposal much more profitably.

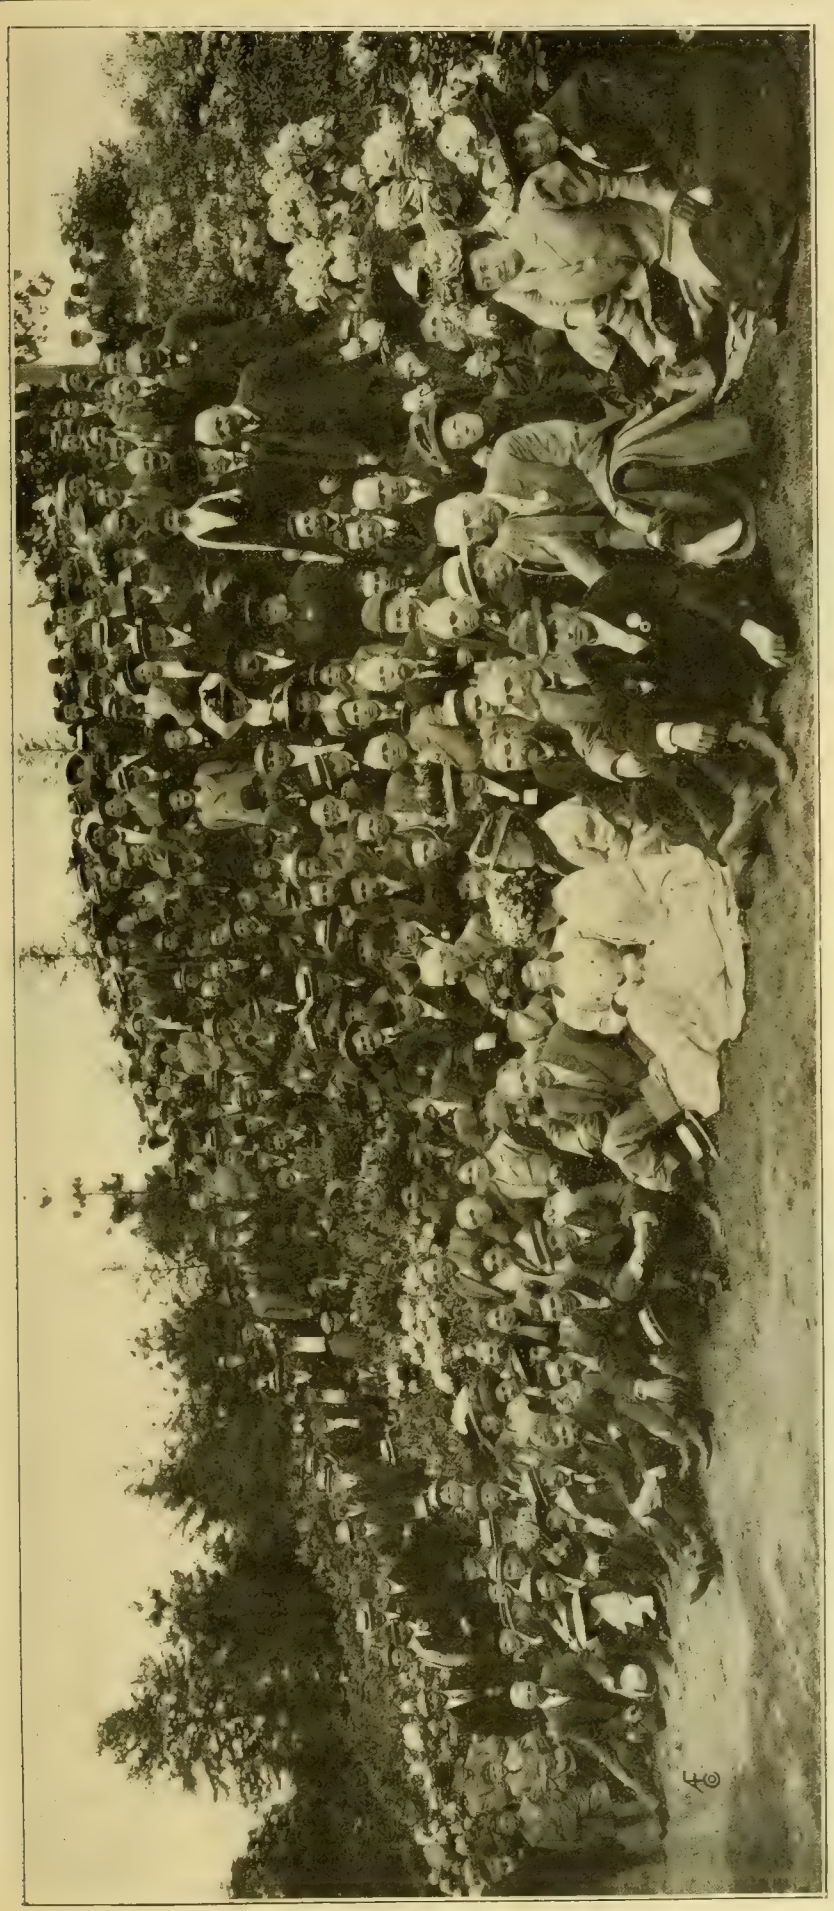
SPRING BUSINESS.

So far as I can learn, the past spring's business has been a record breaker with you all. Stock has been in such demand that good prices have ruled and practically everything has been sold. To cap this excellent condition, collections have been prompt and everybody is working along smoothly, happily and contentedly. For these conditions how thankful we all are. Gentlemen, taking all in all we are following perhaps the pleasantest vocation in the world with its daily contact with nature, and if there is any man in the world who should be an enthusiastic outdoor man, who should encourage in every way in his power the civic societies, neighborhood garden, tree and plant associations, local park boards, forestry movements, etc., it is the nurserymen, for he more than most others is in daily contact with the things with which these organizations have to do and so the more fully can measure the great good possible. Many towns are slow in making appropriations for parks, playgrounds and other breathing places. Hold up the hands of the leaders in these movements and work up public sentiment in the community with which you are identified favorable to liberal expenditure of money for these purposes.

There are many practical subjects for the interchange of opinion and experiences. One subject which was brought very forcibly to my attention a few weeks ago by one who has been very successful as a result of keen foresight and who has been and is today still backing up his convictions is that of investment in lands. How much of his capital can the average nurseryman afford to put into land? Is it not better to own land than to rent it? How have land investments paid nurserymen in the past as compared with their other investments? Should not every nurseryman be a considerable land owner? Is he not in a position to carry land cheaper than the average investor?

The gentleman of whom I speak is connected with large business interests, travels extensively and is intimately acquainted with land values of the world. He states unqualifiedly that for a long investment extending over a period of years nothing is so sure to pay well as land in the eastern half of the United States where he lives. The same may be equally true of the western half. There may be new lands in the west and south which some here know about in which we should all have a few dollars. If so why not tell one another? There may be unusual opportunities for the young man in certain localities. If we should know of them why not put the young man wise?

These meetings to my mind should be experience meetings. A word might be dropped by any member which would greatly cheer and assist some other. Let us therefore in coming together try to help one another by referring to the things that we have found helpful to us in our daily experiences. Your committees have been composed of most excellent men and I wish to thank them all for their loyalty and faithfulness. I will but touch upon their good work, leaving it to the chairman of each committee to make its report from which you can



GROUP OF MEMBERS OF THE AMERICAN ASSOCIATION OF NURSERYMEN AND THEIR FRIENDS AT HIGHLAND PARK, ROCHESTER, N. Y.

judge somewhat of the debt of gratitude we owe to men who have devoted such a large amount of valuable time to the work of this association.

I would be dull indeed if I did not appreciate the great honor you have paid me in choosing me as your president this year when our convention is in my home city. I know you will deal gently with all my shortcomings as a presiding officer and I shall be glad to be corrected when in error. And now, gentlemen, in closing, welcome to our city and may your sojourn with us rest and cheer you and may you return to your homes feeling that it was good to have come to this place.

Election of Officers.

The officers nominated at the evening session on June 9 and elected on Thursday morning were as follows:

F. H. Stannard, Ottawa, Kans., president.

W. P. Stark, Louisiana, Mo., vice-president.

Geo. C. Seager, Rochester, N. Y., secretary (re-elected).

C. L. Yates, Rochester, N. Y., treasurer (re-elected).

This makes Mr. Seager's sixteenth term as secretary, and his re-election was very popular. Wm. Pitkin, chairman of the legislature committee, summarized a bill that was introduced at the last session of congress, but defeated by his committee. He pointed out some of its defects and made suggestions for a new bill, saying in part:

Nursery Stock Inspection Bill.

"Perhaps the most important matter which has come up for action by this committee was a bill introduced in the last congress providing for the inspection of foreign nursery stock at ports of entry. Contrary to a tacit understanding, which had existed for a number of years, this bill was prepared by Dr. Howard of the Department of Agriculture at Washington in connection with several state entomologists, and without consulting our association. The bill passed the house of representatives, and had been reported favorably by the senate committee on agriculture, before your legislative committee had any information regarding the matter. The chairman of the committee called to his assistance Irving Rouse, James M. Pitkin, J. H. Dayton, Abner Hoopes, W. H. Moon and Thomas B. Meehan, and the committee went to Washington, and after a hard fight succeeded in killing the measure for the last session of congress.

"It was agreed that the bill would be laid over, with the understanding that before the next session of congress the legislative committees of your association, together with Dr. Howard of the Department of Agriculture, and other entomologists would get together and endeavor to agree on a bill that would be mutually satisfactory. Following this agreement, and at the suggestion of Dr. Howard, your committee formulated a bill and sent it to Dr. Howard for his consideration about two months ago. Shortly after that time your chairman and some of the members of the committee were in Washington in connection with matters of tariff, and called on Dr. Howard for the purpose of dis-

cussing the proposed bill, but he had not had time to consider the matter, and was not ready to discuss it. It was therefore left for future consideration, and your committee would suggest that the legislative committee for next year be given authority to act on this matter following the general lines of the bill presented for Dr. Howard's consideration."

Other Addresses.

Professor L. H. Bailey of Cornell University gave an interesting address on "The Science Point of View;" L. H. Berckmans of Augusta, Ga., spoke on "The Experiment Station and The Fruit Interests;" E. S. Osborne, Rochester, "Relations Between the Grower and the Retailer." Reports were made by C. J. Maloy of Rochester on the National Council of Horticulture; T. B. Meehan of Dresher, Pa., on exhibits; J. M. Irvine of St. Joseph, Mo., on publicity, and Orlando Harrison of Berlin, Md., on the plan to obtain co-operation between nurserymen and entomologists.

At 12:45 the ladies who were at the convention with their husbands repaired to the Genesee Valley club, where a luncheon was served. Local women were the hostesses. In the evening there was a theater party for the women and a smoker at Masonic temple for the men. In addition to the election of officers at this meeting the following members were elected as an executive committee, of which the officers of the association are members ex-officio: H. B. Chase, Huntsville, Ala.; J. H. Dayton, Painesville, O.; E. M. Sherman, Charles City, Ia.

Trade Exhibits.

The trade exhibition was large and varied, the following being included among the exhibits:

Ellwanger & Barry, Rochester, hardy nursery stock.

Wm. Cooper & Nephews, Chicago, Cooper's spray fluid.

Jackson & Perkins, Newark, N. Y., roses and other hardy stock.

T. J. Farmer, Pulaski, N. Y., strawberry plants.

Rochester Lithographing Co., lithographs and catalogues.

The McFarland Publicity Service, Harrisburg, Pa., autochromes and catalogues.

Dayton Fruit Tree Label Co., labels.

John Charlton & Sons, Rochester, peonies, iris and rhubarb.

Brown Bros., Rochester, fine catalogues and plates.

C. Betscher, Canal Dover, O., peonies and irises.

Thos. Meehan & Sons (inc.), Dresher, Pa., red raffia and calipers.

Harrison Nurseries, Berlin, Md., fruit trees and other hardy stock.

P. J. Berkmann Co., Augusta, Ga., nursery stock.

C. M. Hooker & Sons, Rochester, Perfection currant.

Vincennes Nurseries (W. C. Reed), cherry trees.

Chase Nursery Co., Huntsville, Ala., horticultural tools and appliances.

The Fruit Grower, St. Joseph, Mo., catalogues.

The National Nurseryman, Rochester, N. Y., samples.

The Macmillan Co., New York, Bailey's Cyclopedia of Horticulture and Agriculture.

The Vredenburg Co. Rochester, lithographs.

Clark Nursery Co., Rochester, peach seed.

Stecher Co., Rochester, lithographs.

M. Brunswick & Co., Rochester, hand painted and colored plates.

McHutchinson & Co., New York, raffia.

B. G. Pratt, New York, scalecide.

Clinton Falls Nursery Co., Owatonna, Minn., tree planter and firmer.

L. F. Dittmann, Bellville, Ill., simple tree baler.

Dundee Nursery Co. (D. Hill), Dundee, Ill., hardy conifers.

Niagara Sprayer Co., Middlesport, N. Y., sprayers and spraying mixtures.

Frank B. White, Chicago, special advertising.

The E. C. Brown Co., Rochester, autosprayers.

Perfection Planter Co., Carleton, Mich., perfection planters for potatoes and peach pits.

J. W. McNary, Dayton, O., Hydrangea arborescens sterilis, showing leaf variations; grown by T. A. McBetty, Springfield, O.

Paul C. Koeber Co., New York, art folios in natural colors.

Report of Transportation Committee.

About the only thing your committee on transportation has to report is the matter of changing the release clause on nursery stock. The clause formerly read: "Nursery stock prepaid or guaranteed, invoice value not exceeding $5 per 100 pounds and so receipted for, etc." Notice was received December 31, 1908, that the western classification committee would meet at Mobile, Ala., on January 13 and that they had placed on their docket the revision of the valuation on nursery stock. My time was so fully occupied that it was impossible for me to attend this meeting. W. C. Reed of Vincennes, Ind., kindly consented to go and Stark Bros. Co., of Louisiana, Mo., very generously offered to send their traffic manager, Chas. Sizemore, who is a railroad man of wide experience.

Grass Walk in Ellwanger & Barry's Nursery.

These gentlemen were in attendance at Mobile 11 days before this subject was reached by the classification committee; however, they were not idle during this time. They were interviewing the different members of the committee and corresponding with different nursery firms, getting information and statistics so that when the opportunity was offered they presented the matter in an able and most satisfactory way and were successful in having the release clause stricken out altogether and it was through the strong showing made, that nursery stock in a general way does not exceed $5.00 per 100 pounds, that this clause was stricken out and your committee would therefore urge that when it is necessary to make a claim that it be made on a reasonable and proper basis.

F. H. STANNARD,
Chairman of committee on transportation.

Main Street, Rochester, N. Y.

Local Feature Committees.

The following were the local committees in charge of the features of the convention:

Finance—W. C. Barry, Irving Rouse, Nelson Bogue, Geo. C. Perkins, Geo. S. Josselyn, Theodore J. Smith, John B. Morey, Wm. C. Maloney.

Smoker—E. S. Osborne, Chas. L. Yates, O. G. Chase, J. M. Pitkin, E. O. Graham, Walter W. Wyman, Chas. H. Vick.

Rides and Excursions—Chas. J. Maloy, M. B. Fox, B. F. Allen, F. E. Grover, Chas. H. Hawes, R. D. Leutchford, A. L. Wood.

Entertainment of Ladies—Horace Hooker, R. G. Salter, J. F. Dale, E. S. Mayo, A. A. Mosher, Thos. F. Brown, C. H. Chase, Mrs. C. J. Brown, Mrs. G. C. Seager.

Decorations—A. H. Salter, J. M. Charlton, Geo. F. Crossman, J. M. Keller, Fred. W. Vick, Fred Schlegel.

Executive—Wm. Pitkin, J. M. Pitkin, Chas. J. Maloy, E. S. Osborne, Horace Hooker, Wm. C. Barry, A. H. Salter, Geo. C. Seager.

Press—H. C. Goodwin, John Craig, Chas. A. Green.

Convention Notes.

The Moons, Samuel C. and William H. of Morrisville, Pa., were conspicuous figures in the convention. The name of Moon is particularly appropriate when applied to William H., for his face is round and smiling, shedding happiness, just as the full moon does. Samuel C. Moon might easily be taken for a college president, a great preacher or a great philanthropist. We believe he could fill any of these positions better than some who are now on the jobs.

And, speaking again of Rochester, it is a great convention city. The statewide Sunday school workers, the Lutherans and several other religious bodies were there in convention contemporary with the nurserymen, and it was all very appropriate.

Politics came in for some hard knocks in the reports and papers. Politics is the canker worm, the gypsy moth and the San Jose scale to the tree of patriotism and statesmanship, or it is worse than all of them combined.

The little flurry of opposition to the re-election of Secretary Geo. C. Seager was but a short time in passing. He was too good a man to turn down, and the delegates wisely saw it in time.

Both the west and south were well represented. Kansas, Missouri, Tennessee, Alabama and others who once were foes, joined hands to uplift the noble art of horticulture. Now we know that the war is over.

Many of the delegates will long remember Highland park, its rhododendrons, azaleas and other beautiful flowering shrubs and plants, likewise John Dunbar.

Isn't that joke about the yellows in peaches getting rather stale? To the best of our recollection it had whiskers a foot long when we were children.

It is some distance from Rochester to Oregon, but there was at least one delegate from that state. There was also one from France.

ELLWANGER & BARRY'S NURSERY, ROCHESTER, N. Y.

Entrance to Grounds and Offices.

E. G. Hill of Richmond, Ind., is as much at home among nurserymen as florists and he is even said to know a little about seeds.

Considering that some people persist in calling New Jersey a foreign country, it was well represented.

Rochester is a great city. "Ask me, I live here," was the motto during convention week.

It was a great convention!

New Style "Nursery" Rhymes.

(By Josselyn.)

James wrote, "Come and help us and git
off that fence,"
And said "on most themes your mind is
quite dense."
Work your poetry pedal, you never talk
sense,
We hardly expect it at Rochester.

The Genial President.

The case and grace with which Charles J. Brown of Rochester presides over the sessions of the convention were acquired when he used to wield the gavel as chairman of the Monroe County Republican General Committee.—Rochester Herald.

Said sailor: "Where bound? How trim you
must feel
In full store-clothes rig from your truck
to your keel."
I'm goin' to big town where they sarve a
square meal.
And that's how they do it in Rochester."

At Milwaukee last year we seemed fairly
well bred
Stepped softly, dined wisely, went early to
bed.
Old Cutter warn't there; he was dead, so
they said.
Is he with us in Spirit in Rochester?

Once at Seneca tavern I ate kangaroo,
Tho 'twas French on menu, seemed like fine
Irish stew.
Should judge 'twould blend well with Bartholomay brew.
They sometimes do that too, in Rochester.

From platform of Empire Kang tried to
jump down,
The conductor grabbed us and said with a
frown
"Wait a mile or two, here you would muss
up the town,
Can't allow you to do it in Rochester."

I know of a crank who spells egg with
one g,
Another writes hoss h-o- double s-e,
In pronouncin' and grammar, how "intristing" we be.
Now how do they do it in Rochester?

Said a kid: "Pa, what's this gag about family tree,
Did the Lord make you and ma, sister and
me?"
"Sure son. When you've read the Good
Book you will see."
"Say dad, don't he improve right along
here in Rochester?"

I remarked to a friend that I'd bought real
estate,
"Did you?" said he. "Yes. They 'did me'
'not' straight,
Next time I'll have better judgment and
wait."
How I wish I had bought all of
Rochester.

At banquet a stranger in language quite
terse
Said: "Are you the landlord?" "No, sir. I've
done worse,
But could never keep tavern nor yet drive a
hearse."
That gent undertakes it for Rochester.

At these outings our boys will make eyes at
the fair
At Dallas one charmer had kinks in her
hair,
These youths must awhile with flirting forbear,
Nicest gals don't do it in Rochester.

At next turn of the wheel the Poe slipped
a cog,
Its grist must be veiled like a barn in a
fog,
It was rhymin' Jim's yarn about hoss or a
dog.
Repeat it? Can't do it in Rochester.

[And yet they did not shoot the rhymster.
—Ed.]

"Ain't You Glad You Came?"

"It's 26 years since the association has convened in Rochester; but I don't think they'll stay away so long again. This is the place to come for up-to-date ideas on nursery matters."—William Pitkin, State Fair Commissioner.—Rochester Herald

Relations of Nurseryman and Farmer.

BY T. B. WILSON.

The subject of my talk is "The Relation of the Nurseryman to the Farmer." This relation should be so close and harmonious that the one could whisper in the other's ear at any time. Such, however, is not the case. They have really fought each other. The nurserymen seem to class themselves apart and, although they are right in the sense that they are self-elected and their trade requires more business methods than the ordinary farmer is willing to apply to his work, the fruit grower resents such an attitude.

The farmer should be raised up a notch. This can come by education only. On the other hand the nurseryman ought to be willing to come down a notch and put himself in the farmer's place part of the time. I believe both intend to be honest, but are hardly fair with each other and the one is probably as much at fault as the other. The practices of some nurserymen are unfair to the fruit grower. It is of these practices that I wish to speak.

SUBSTITUTION UNFAIR.

One of these is the right of substitution, the right claimed by some nurserymen. The purchaser of nursery stock has no assurance of the varieties he is getting until the trees commence to bear. The guarantee of the nurserymen is to replace any tree not true to name. Of what value to the grower is a nursery tree in place of a bearing tree in the orchard? Unquestionably of insignificant value when compared with the loss to the grower. The nurseryman ought to recognize the grower's position more fully and make a fairer settlement of these difficulties.

Again some nurserymen are not particular enough in filling orders to select first-class stock only. Especially is this true when the trees go to sections where fruit growing is carried on to a small extent. Such discrimination, it is true, offers an avenue for the disposal of inferior stock where the nurseryman thinks no objection will be made, but it takes undue advantage of the farmer and should be stopped. It will be unprofitable for the nurseryman in the end, as it will discourage future sales in such localities. There are a few men, advertising as nurserymen, who in reality buy all their stock—many who buy part of their stock. Such stock is secured from sources of most advantage to the purchaser. This practice is a serious drawback to the fruit grower and has made many a customer dissatisfied. It should be discouraged.

PEDIGREE STOCK.

I want to suggest for your consideration the subject of pedigree stock. Increasing competition in the dairy districts has compelled the weeding out of all but the first cows—cows that are not only of the first breed, but are the best in that breed. The time has now come when the fruit grower can no better afford to have unproductive and unprofitable individuals in his orchard than the dairyman in his herd. We cannot blind ourselves to the fact that an apple tree possesses individuality just as much as a cow does—that two trees of the same variety and similarly grown in every respect, except that they are from two different scions, often differ greatly in the amount and quality of their fruit.

By the time an orchard has come into bearing it is a troublesome matter for the fruit grower to rework those trees that prove to be below standard. The place for such selection is in the nursery row, and as long as buds and scions are taken from nursery trees and not from bearing trees of known quality, such selection will never be accomplished. The problems above mentioned seem to me to present the most serious difficulties between the nurseryman and the growers. Nor is the nurseryman entirely to blame for these. Too often the grower himself is at fault. Honesty and fairness to all men and by all men will do much to correct these difficulties.

Relations Between Grower and Retailer.

BY E. S. OSBORNE.

The subject which has been assigned to me is of sufficient range to permit one to talk on indefinitely. I shall not, however, take up a great deal of your time, as I know you are anxious to hear the reports of your committees, attend the other meetings that are scheduled for this afternoon, and also to get in training for the smoker which is to be held this evening. It has been my pleasure to attend a number of conventions of your association, but in all the papers which have been read and addresses made, little attention has been paid to the retail end of the nursery business, yet we count among our membership a great many firms, the bulk of whose business is retail, the wholesale department being used more to dispose of the surplus stock, which any firm doing any growing at all is bound to have.

With all due respect to our wholesale brethren, I believe the time has come when something of interest to the retail nurseryman should come up at all of our meetings, and I hope that in the future the committee on programme will arrange for papers that will treat on the nursery business from the retail standpoint. I confess I do not know why the committee on programme used the words "Reliable Retailer" in naming my subject, for all retail nurserymen are supposed to be reliable.

The relations between the grower and the retailer should be of the pleasantest character, and each should strive to do his best to assist the other and to protect him, for the very reason that the success of each is dependent upon the success of the other. It is true the grower could say that he could get along very well without the retailer, that he could market his trees at perhaps a bigger price than he is getting for them now, but is he fitted by experience and ability to go ahead and do so? On the other hand, the retailer might say that he could go ahead and grow stock and be independent of the grower, but the same question arises again, is he experienced and has he the ability to go ahead and do so? I think you will agree with me that in the majority of cases neither one is fitted or experienced for the duties of the other. Such being the case then both are helpless without the assistance and good will of the other. It, therefore, behooves the grower to protect and assist the retailer and the retailer to do likewise.

The grower should be careful in the propagation of his stock, should see that his varieties are not mixed, and above all, that the stock is absolutely true to name. Care should also be exercised in grading so that the most exacting retailer will have no cause for complaint when stock is delivered to him, for there is nothing more exasperating when a fine lot of stock is expected than to find on delivery that it is not up to grade either in height, caliper or quality, and delivery of this kind only means loss to both parties and an added additional expense. On the other hand, the retailer should remember that nature is not as good to some varieties as to others, all of which should be taken into account when trees are being sorted.

There is another point I wish to draw the attention of the grower to and that is the practice of sending wholesale price lists and surplus lists to the consumer. If there is anything that is unfair or unjust to the retail nurseryman it is this unfair practice. There is no reason under the sun why a consumer should be able to buy trees and shrubs at wholesale. You would not expect to go into a wholesale clothing house and buy a suit of clothes at the same price as the retail clothing merchant, and I can see no reason why the consumer in our line should be accorded this privilege. Do not understand me as saying that anyone here makes this a practice, but I have had a number of wholesale lists sent into our office by our agents which have been picked up by them from prospective customers. If you are in the wholesale business be satisfied to dispose of your products to the retailer and I am sure that if the stock is good and prices are right you will have no trouble on this score.

Before closing there is just one question I wish to call to your attention and that is, whether the professional landscape gardener is entitled to receive the wholesale price list of the grower. I would answer this question in two ways: Yes, provided he would resell the stock to those for whom he is employed at an advance, taking a reasonable profit, and there is no reason that I can see why he should not take this profit. On the other hand, if professional etiquette will not permit him to do this, then I cannot see why he should be allowed to buy stock at wholesale and turn the bills over to his employer, the consumer, permitting him to buy a small quantity of stock for home consumption at the same price as the retailer pays who buys in large quantities.

Be Sure To See Our Parks.

John Dunbar, assistant superintendent of Rochester's parks was a happy man when he pointed out some of Rochester's floral beauties to the visitors on their sightseeing tour, and there is no one who could do the job more expertly.—Rochester Herald.

Nurserymen Pulling Together.

BY J. H. DAYTON.

I have been assured that there is never too much of a good thing, yet have sometimes thought that a reduction in the number of nurserymen might be a benefit to the trade. Yet when we consider the joys that flow into his life, how near he is to nature's heart, how calm, sweet and peaceful an existence he leads, how cares, worries and perplexities skip him by, the wonder is not that we have so many but that many more are not scorning the temptations to engage in some well organized, well conducted business with established customs, rules and regulations, and becoming a free lance in the tree world, where every man can be a law unto himself, and unlimited competion take the place of organized effort.

TROUBLES AND TRIALS.

It certainly is fine fun to chase the elusive wooly aphis to his lair, with a swab of fish-oil, to bend the gentle swaying branch of the cherry or apple heavily laden with black or green aphis down into the depths of the pail of tobacco juice, to listen to the wily tree buyer, as he calmly convinces you that trees you thought were worth 15 cents on your grounds are in reality high at 7½ cents, boxed and freight paid; to open the letter dated April 7, saying—"Gentlemen: We have as yet received no notice of the shipment of our trees, as per our order of the fifth. We call on heaven and earth to witness that everything else ordered the same date is in, that it is impossible to bill up a single order until your shipment is received, and eternal and everlasting ruin is our portion, unless your shipment reaches us at once." You grab your telephone, order the foreman to drop everything else and rush that shipment off. The next letter opened is from the same firm ordering a long list of assorted stock, shipped with their first order. Joy is not everything on this mundane sphere regarding it as a business, as it surely is; is not the percent of actual cash cleaned up on our investment about the only true criterion as to its value?

To judge from the letters published, the papers read at some of the fruit growers and horticultural societies, the remarks made and laws introduced into some of our legislatures, the sole object of every nurseryman is to do up his customers, mislabel and kill as many of his trees as possible before shipment. The truth is, that, outside of the few genuine mistakes that are bound to occur in any business, the swindling dealer or nurseryman is able to carry on his operations only by the ignorance or cupidity of the buyer. The consumer, who will use as much brain work in buying nursery stock as his wife does in buying clothing for the kids, will get what he buys and pays for. However well established our reputation seems to be for deeds that are dark, do you not think a little honest striving together might eliminate some abuses, destroy some bad habits and set us a little nearer right in the eyes of the consumer?

ACTIVE CO-OPERATION NEEDED.

We will all agree, that, taking into consideration the inevitable task in growing and handling perishable stock, the experience and care that must be exercised to produce good stock, the capital that must be provided and locked up in growing blocks for from one to 10 years or more, that the returns are not and have not been at all commensurate and that in any series of years, more stock leaves the actual grower's hands at an actual loss than at a profit. Who ever heard of a rich nurseryman who obtained his filthy lucre from the profits in growing stock? Who is to blame? Well you and I, if we are honest about it will shoulder the responsibility and acknowledge it is our own fault. We cannot figure to a certainty the cost of our products, as does the manufacturer, who is able to control conditions and to insure both his finished product and raw material, but can we not establish a table of values and fix a basis below which everyone will understand he is selling at a loss? Can we not educate ourselves as to the true value of our stock and the amount we must procure, if it is sold at a profit? In fact, do you not know, that active intelligent co-operation among nurserymen could be made to establish us on a genuine business basis and establish confidence among ourselves and in our dealings with the public?

Commerce is not war and the good bargain benefits both parties. I understand the first fruit trust was organized in the Garden of Eden, with his satanic majesty as promotor. Perhaps the disastrous result of that speculation is one of the reasons why it seems almost an impossibility to secure active, honest co-operation amongst the growers of agricultural and nursery products. I remember hearing Mr. Collingwood make a statement, something like this, "If you should lock up seven farmers (he might have said nurserymen) in a room, give them a week to deliberate and their choice of coming out to pool their issues, buy and sell their products as one, directing one or two of their number to attend to their business as officers; or to be hung, there would be seven hangings on the seventh day."

TIME RIPE FOR ACTION.

Is not now a good time for concerted action in a common cause? Cannot we agree on some things we know and acknowledge to be wrong, eliminate and bury them so deep that their specters will never again trouble even the dreams of our trade? Cannot a few things, that we all know would improve our business and put money in our pockets, be adopted and lived up to by enough of our members to make them so essentially the rules of our trade, that no one will think of breaking them?

What about price lists? Like some ministers' texts, are they not often used only as a point of departure, only we run prices down, while the reverend is trying to elevate. What about the price list of steel or iron, or a thousand other manufactures? In what other convention in the world could I step from the platform and receive such a variety of prices on what purported to be the same article, and on what other commodity would there be such a diversity in grade or value when delivery was made?

If you knew nothing about our business and were made a trustee of some institution, who desired a bill of trees for its grounds, you make up a list, ask prices and receive bids, offering exactly the same lot of stock at from $318 to $675, and every offer from a reliable house, long in the business, well quoted in commercial reports and capable of filling their contracts, what would you think of the business sense and sagacity of the organized nurserymen? If a tree is worth $1 of any planter's money the first day of April, is it worth only 20 cents the first day of May? Have we not deliberately educated buyers to the fact that our products have no fixed value and that our estimated value fluctuates from day to day during the season, according to the way our mail opens up, or our food agrees or disagrees with us? Why are we so anxious to dispose of a little surplus at prices far below cost, that we seem to be willing to, and do make every effort as the season advances to demoralize prices, and trade demoralize our standing in the eyes of business men, demoralize our chances for selling our next year's products on a reasonable basis?

BURN SURPLUS STOCK.

Figure it out, and you will find the ash heap one of the most profitable articles on the nursery grounds. About 99 times out of 100, it is cash in our pockets to sell what we can at a fixed profitable rate and burn the surplus, to say nothing of the better condition we are in for future trade. As long as our price basis is that we can grow and sell as cheap as the other fellow, or indeed, go him one better, can we expect anything but meagre returns, or none? Are not the cut rates, reduced lists and cheap offers that flood our mails late every season, simply an admission of our incapacity to dispose of our stock at fair and reasonable profits?

What about grades? Perhaps no one standard will be adapted to every section, but is it beyond the capacity of this body of men, to fix and put in operation a system of grading that any man can learn and apply, and that will make us reasonably sure of what we shall find in our cars, and boxes when delivered? What about buyers at wholesale? Who are entitled to trade prices? Would it not be possible to have a list of actual wholesale traders, revised from year to year? Is the man who occasionally buys a few trees from his neighbor or who every year disposes of the products of a few acres of small fruits entitled to trade rates and surplus lists?

Take our own state, Ohio. Last year 567 applications were made for certificates, 509 issued. Of these 87 cultivated ten or more acres, one, ⅛ of an acre, 82 one acre or less, the large majority small fruit growers and sell nothing but their surplus plants, yet their names find their way into our mailing lists as nurserymen. Are the public institutions, parks, etc., who buy one to three large bills for the planting of their grounds entitled to same rates as fellow nurserymen? Why not decide and have some ruling that we could all know and understand, instead of as at present, everyone a law unto themselves? What about the man who buys an estate and pays the landscape architect a large price for planting plans and supervision? Should we supply the stock at lowest trade rates, assuming as we have to, all the risk and rebates expected by the retail purchaser? Ought not we to fix our own terms and methods of handling this business instead of allowing another organization to dictate them to us?

Perhaps none of these things and none that might be mentioned could be changed to suit us in one or two years, but taken up in a spirit of fairness and co-operation by the majority of the nurserymen at this convention, any or all of them could be made practically obligatory for the entire trade in a few seasons. We trust each other in every way until we come to the marketing of our products, when we usually act as though we thought every competitor had the principles of a Sioux Indian and was out with his little tomahawk to do us up, and hang our bleeding scalps in the sacred precincts of the bankruptcy court.

No nurseryman can live to himself alone; anything that hurts one firm hurts all; any method adopted by one or more that elevates the business and standing of one firm elevates all. Should we not stand together, or rather move forward together, co-operating not only with one another, but with all kindred organizations, not only to receive some of the results hinted at here, but in connection with civic improvement bodies, the Council of Horticulture, or any or all agencies, of which the object

is to make a cleaner, brighter and better planted America. Every back yard cleaned and planted, every scholar interested in a school garden, every farmer shown the possibilities of fruit culture, are bound to extend our business and make a better outlet for our stock.

Do not think I have no faith in our business or in my fellow tree man. Every one on the programme has a dispensation to knock a little. All of us, who have for years been trying to reach an automobile income, and have been sweetened by adversity until we now have all faith in walking, as an exercise and a sure way to get there, all know that through our organization much has been accomplished, that there is a better understanding, more of a disposition to look at things with the other fellow's eye, a strong desire here and there to get together and put the nursery interest on its proper plane. We have done many things, we can do many more.

Crow's-foot Elm.

AUSTRALIAN SUBSTITUTE FOR HICKORY.

In response to inquiries made by American wagon manufacturers, Consular Agent Asbury Caldwell, of Brisbane, furnishes the following information concerning the crow's-foot elm of Queensland and its use as a probable substitute for hickory:

"In a previous report attention was called to the fact that the director of forests in Queensland had urged upon carriage manufacturers the value of crow's-foot elm as a timber for use in that trade as a substitute for the rapidly disappearing American hickory. In response to a request made through the department of commerce and labor for further information, it may be stated that crow's-foot elm is a perfect substitute for American hickory for use in wheels, shafts, poles and spokes. The chief engineer for railways in Queensland reports that exhaustive tests of the timber are being made by his department, the result of which will be placed at my disposal at a later date. The director of forests, P. MacManon, supplies the following statistics:

"'Crow's-foot elm is Tarrietia argyrodendron (Bentham). There are two varieties. One is dark in color and the other is light. The latter is found in the southern part of Queensland, where it is often called hickory, to which wood it bears a decided resemblance. The darker variety is found chiefly in north Queensland, where it occurs in great abundance, attaining a height of over 100 feet, with a long clean barrel having a diameter of from three to five feet and sometimes more. The dark variety is also found in south Queensland, where, though quite a large tree, it does not attain the same size nor is it so plentiful as in the north.

"'The wood of the darker variety is very beautiful when cut in the radial direction, being of a light golden ground mottled with flakes of bright brown. The color changes as the wood is held at different angles to the light. It is now being used by the government railways for railway carriage fittings, on account of the beautiful color and grain. It is extremely elastic. I have had it made into trout rods and have tested it in several ways. A carriage woodware company at Nundah is using it for spokes and it is being made into ax and hammer handles in a factory in Cairnes, north Queensland. I have had it tested at the physical laboratory of Melbourne University, when pieces 36 inches span by 1.96 inches breadth by 1.92 inches depth having a breaking load of 2,350 pounds, the modulus of rupture being 17,560 pounds. The weight per cubic foot is about 46 pounds.

Twenty Years Ago.

JUNE, 1889.

The fourteenth annual convention of the American Association of Nurserymen was held in Chicago. Substitution was then, as now, a point widely discussed and Robt. Douglas expressed the belief that some nurserymen only draw the line at substituting a Norway spruce for a Ben Davis apple.

Growers were apt to include too great a variety in their stocks, especially in the bedding plant line, to make the best profit.

Bon Silene roses sold at $6 per 100 for the Decoration day trade at Boston.

A cross between a lily and an iris was one of the wonders which were "talked about."

The climbing sport of Niphetos rose was one of the novelties, White Perle was another.

The Phipps conservatories were built in the Allegheny city parks.

"Nature's way" was how overhead heating was described.

Frost in June did a great deal of damage to the bedding in the Chicago parks.

To Be Done Now.

IN THE GREENHOUSES.

Give a good coat of lime wash to all empty benches and let it dry well before filling in the soil.

Look out for the first attacks of thrips or red spider in the young cyclamens and fumigate at once if any are seen.

It is no use keeping callas longer under glass except for special purposes. Get them outside and give them a good rest.

Finish potting or flatting up the stevias and plunge them outdoors; shade lightly until established.

Never neglect to thoroughly clean a house, roof, benches and walls when it is empty or nearly so, as it can be done much more easily than when filled with plants.

Pot Begonia Gloire de Lorraine and place the plants in a light position, shaded from bright sunlight.

Begin to feed tomatoes as soon as the first bunches of fruit are set and swelling freely, keep the laterals pinched out closely, and when growing too freely shorten the leaves a little.

To induce crotons to flower and seed keep them pinched for pot room and grow in a clear light, keeping the roots on the dry side.

When cucumbers are fruiting freely feed the plants regularly and topdress with rich soil thinly once in two weeks.

Dry off and cut back a few marguerites and place them in a cool frame or house. Spray them freely and a number of excellent cuttings will result that will make fine stock for winter flowering.

A few lantanas and heliotropes potted now and plunged outside to be cut back later will give far better cuttings for stock in autumn than planted out specimens.

OUTDOORS.

Keep the soil moving between all crops and growth will be quicker and the plants healthier than if left alone.

Plant squash or pole beans in any out-of-the-way corner where there is something unsightly to hide.

Plant up plenty of geraniums for stock in an open position, if the grounds do not admit of planting for display. Where beds can be planted near the greenhouses and carefully tended they form a good advertisement.

Phloxes may be propagated by means of cuttings made of the young shoots now pushing up from the old stools.

Place supports early to all herbaceous and annual subjects needing this attention.

Propagate primroses and polyanthuses by division now, planting the young stock in a cool and moderately shaded position and watering freely until new roots start.

It is not too late to sow seeds of wallflowers, myosotis, primroses, Campanula pyramidalis and others in nursery beds for flowering next spring.

Keep closely after the climbing roses on pergolas, arches, etc., and spray them for insects, especially aphis.

Propagate arabis, aubretia and alyssum by seed and division, and, after the flowers are over, clip back the plants somewhat hard to prevent their getting long and straggly.

When thinning of fruit is practiced—and it should be everywhere—do it early, so that the trees are relieved of the strain of carrying the superfluous fruit.

Horticultural Inspection in Utah.

John P. Sorenson, horticultural inspector, submitted the following report for the month just ended to the county commissioners June 1: "In the month of May the deputy inspectors worked from 12 to 15 days each, as it was considered needful in the different districts, making a total of 78 days' work. In the first part of the month there were some 10,000 trees imported and about 25,000 sent out from the nurseries. Most of the imported trees, as well as the ones dug up in the nurseries, were sent out of the county and a large part out of the state.

"There were set out in the nurseries and planted about 700,000 seedlings, about 200,000 of which were foreign importations. The spraying for the codlin moth larva is now on and should be prosecuted with the utmost vigor during the next 10 days if we want apples free from worms. After we get through with the first summer spraying it will be time to search out and clean out the pear blight, if any of our trees shall be preserved."

Botanists at Philadelphia.

Thoroughness characterized the annual scientific assembly of the Botanic Society of Pennsylvania, which met June 5 in Biological hall under the auspices of the University of Pennsylvania at Philadelphia. A large audience was present and the field covered was a large one. Provost Harrison, the honorary president, called the session to order and delivered a felicitous address of welcome.

The programme of addresses consisted of the following: Miss Myra Dock, "A Little Journey in the Pennsylvania Forest Preserves;" Dr. Henry Leffmann, "Parisitism in Plants;" W. B. Davis and George B. Kaiser, "Botanical Wonders Revealed by the Micro-Lantern;" Dr. S. C. Schmucker, "Nature's Rotation in Crops;" Dr. Bertha M. Clark, "Parallelism of Vegetation Changes and Rock Changes;" T. H. Toothaker, "A Few Useful Plants." The most interesting number was the address of G. Nahai, the Japanese botanist, who spoke with a quaint accent on "Plant Scenery of Japan." His remarks were illustrated by means of some superior colored slides.

BROOKLYN, N. Y.—Aloysius Gross, who shot and killed his employer, John Scott, of 566 Midwood street, April 19, was arraigned for trial June 7. He pleaded guilty to manslaughter in the first degree. This plea was accepted by the court, and Gross saved himself from the death penalty, as he was indicted for murder in the first degree. Gross was remanded for sentence and he may get a sentence of 20 years. Subsequently this plea was withdrawn.

THE AMERICAN FLORIST

1885 TWENTY-FOURTH YEAR. 1909

Subscription, United States and Mexico, $1.00 a year; Canada $2.00; Europe and Countries in Postal Union, $2.50. Subscriptions accepted only from those in the trade.

When sending us change of address always send the old address at the same time

Advertising rates on application.

From the first issue the AMERICAN FLORIST has accepted only trade advertisements

Advertisements must reach us Tuesday (earlier if possible), as we go to press Wednesday.

We do not assume any responsibility for the opinions of correspondents.

Eastern Representatives:

They have no pride of birth,
No choice of regal bower;
The humblest, lowliest spot on earth
May claim the fairest flower.

A CLEAN start in a clean house is a good start for all crops, cut flowers, plants or vegetables.

REPORTS from peony growers respecting the behavior and reliability of new and standard varieties would be welcome.

FARMING ON PAPER.—An article in Market Gardeners' section, this issue, is well worth reading.

THE increased information re steamship sailings, relative to the piers from which the boats start and the time of sailing, will be of great assistance to retailers forwarding flowers to meet these sailings.

WHILE many are using concrete benches there are many others that favor wood benches and the excellent illustrated articles in this issue, in which practical and lasting benches are described and figured, will be of interest.

OUR Baltimore correspondent says that "no flowers" appears on some commencement invitations, so that Chicago is not the only city in which these joyous occasions are threatened with a funereal appearance. Fortunately, he says "the rule is the other way."

The general average condition of crop growth, based upon crops reported to the Department of Agriculture to June 1 was approximately four per cent below conditions on June 1, 1908, but about eight per cent better than on June 1, 1907. The reports include cereal, vegetable, hay and fruit crops.

As an instance of spirited local advertising the five-page announcement of J. W. Ross of Centralia, Ill., is worthy of mention. In the Centralia Sentinel Mr. Ross had this amount of space recently, covered with good illustrations, descriptions, prices, etc., of his specialties in plants, seeds and bulbs, quite a catalogue in short. This was on the occasion of his spring opening.

AT the risk of being charged with repetition we again urge on growers the need for care in handling poisonous insecticides and fumigating compounds. It is positively criminal to leave such things around where children, inexperienced or careless persons have access to them. A recent case is reported in England in which a boy took some nicotine preparation home from his work and his mother used it on two of her children's heads. Both were rendered unconscious, and their lives were only saved by prompt medical treatment.

THE Proceedings of the Seventh Annual Meeting of the Chrysanthemum Society of America contains an excellent portrait of President Elmer D. Smith, his report and also a full report of the meeting at the Coliseum, Chicago, in November last, including the reports of officers. The official judging scales are also given for commercial, exhibition, single and pompon varieties, as well as a list of all varieties disseminated during 1908 and descriptions, also a list of members and affiliated societies. All interested in the chrysanthemum should send for a copy to Secretary Chas. W. Johnson, Rockford, Ill., enclosing the membership fee of $2, an amount ridiculously small in comparison with the benefits accruing from membership in the national society.

Society of American Florists.

TRADE EXHIBITS.

Superintendent Wm. Murphy is out with a large circular including map and all details regarding coming exhibition. Write for it to Wm. Murphy, 311 Main street, Cincinnati, O.

Florists' Hail Association.

Another batch of losses, aggregating $5,000, are on the table of the secretary of the Florists' Hail Association. These will be paid as soon as adjustments can be made. This will be the banner year for the Florists' Hail Association in payment of losses, the present estimate being at least $25,000 for the year.

Greehouse Building and Heating.

Based on the past season's experience, growers will be formulating plans for new houses, alterations and improvements, heating apparatus, water supply and other work of a kindred nature. We would appreciate it if all who have this work in progress or in view would send us full particulars as to what they are doing or intend to do, the class of construction they intend to use and their various reasons for using it. Even if not planning work in the immediate future, criticisms or notes on the many appliances and aids along this line would be interesting and instructive to others looking for this information.

The Way the Wind Blows.

Mark Twain says the wind blows from the north, or the south, or the east, or the west, or some point approximating in those general directions.

Memorial day has again passed into history. It is certainly a beautiful custom of the Americans to honor their dead and more so that the custom belongs to no class or creed, but a generally accepted day for every one. The florist is benefited greatly and he should see to it that the flowers are reasonably fresh. Every year brings its quota of complaints and we should do all that is possible to keep that which gives the golden egg.

Almost a year since Alex. Wallace passed beyond, a man of sterling merit loved by those who knew him and respected by those acquainted in a business way. A man with more than ordinary talents, who, like most of those who cross the pond, worked hard and used them, and through sheer grit landed in the front ranks. I remember reading in a London horticultural journal an article pertaining to famous Scotchmen in America, men whom he considered in the front ranks of horticultural pursuits. Would it not be a pleasing thing if those men whom he eulogized would start a movement for a monument to his memory. The whole profession, I am sure, would join in with their mites and erect something to a man who made something out of nothing. It seems a pity that a man cannot know the esteem in which he is held before he dies, but such seems to be the way of the world.

I see my friend Elliott takes exceptions in a recent issue of THE FLORIST. Mr. Elliott need not feel so bad, for it is only the top-notchers that get criticized. Men from whom we expect to learn something. Just look at Prof. Corbett about refraction. The bunch got after him like a gang of Kilkenny cats, with their claws sharpened. Having passed the third degree and all the various degrees in all stages, I am delegated to act as shepherd of the florist flock and keep the members right in line. To return to friend Elliott, his reasoning, theory or otherwise, which he don't seem to be quite sure of him-

self, about the blanket of cold air, seems to be out of place in nature. I could give him a mass of figures, but he would probably say I was wrong. I received a letter from a friend in Boston, thus: "Dear Raffia Strings. At a lecture given by a representative of Lord & Burnham before the Boston Gardeners and Florists' Club some years ago, Mr. Montgomery in reply to Mr. Stevens said regarding the upper air of his big house, that the difference in temperature six feet above the floor of the house and that of the upper air, almost at the ridge, was only two degrees, that of the top air being higher." Asked by the same gentleman if he noticed any higher temperature in the upper air on a cold night with the wind from the south, the reply came: "On cold nights the wind never was from that point." Now those two gentlemen have different opinions and I will let the trade judge who is right. I thank that friend very much. He signed himself F. P. Whether he meant fair play or not I don't know, but probably the New Hampshire air makes all the difference in the greenhouse heating.

I see Peter Bissett had a paper read on water plants before the Boston Club last month. Boston was never great on water. I remember some of the Boston delegation and also the New York delegation who visited Washington some years ago drank water and were promptly sick. Word is always passed along when they go from home to be careful of the water boys. They always take the precaution to mix it.

Some peculiar events happen these days. Isn't it about time we had a report of the proceedings of the Ananias Club? Last fall W. N. Rudd issued a notice in THE FLORIST that the above named club would hold session at Chicago at the National Flower Show. I and many more were surprised that the call should come from such a man as Willis. We had no idea that he was eligible for membership or office holding in the above association, but others see just as funny things as RAFFIA STRINGS.

Meetings Next Week.

Detroit, Mich., June 21, 8 p. m.—Detroit Florists' Club, Cowie building, corner Farron and Gratiot streets.

Grand Rapids, Mich., June 21.—Grand Rapids Gardeners' and Florists' Club, Board of Trade rooms, Pearl street.

Hartford, Conn., June 25, 8 p. m.—The Connecticut Horticultural Society, County building.

Montreal, Que., June 21.—Montreal Gardeners' and Florists' Club, Royal Guardians' building, 211 Sherbrook street, West.

New London, Conn., June 23.—New London County Horticultural Society, Elks' hall.

Providence, R. I., June 21, 8 p. m.—Florists' and Gardeners' Club of Rhode Island, 96 Westminster street.

Toledo, O., June 23.—Toledo Florists' Club.

Winnipeg, Man., June 24.—Winnipeg Florists' Association.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc

Situation Wanted—By experienced seedsman, either in house or on road.
Address Key 833, care American Florist.

Situation Wanted—By florist who thoroughly understands the growing of cut flowers, pot plants, ferns, palms, nursery stock; state wages in first letter; strictly sober; good designer.
Key 837, care American Florist.

Situation Wanted—By experienced grower of roses, carnations, violets chrysanthemums decorative and bedding plants; middle aged single, sober; state wages. Address
Key 822, care American Florist.

Situation Wanted—By sober, young man; 24; experienced as rose carnation and 'mum grower; capable of taking charge of section or commercial place; kindly state wages. Address
Key 824 care American Florist.

Situation Wanted—By practical all 'round man; inside or out; private or commercial; eight years in last position; married; English; 25 years' experience on private and commercial places. Address Key 821, care American Florist.

Situation Wanted—Gardener, 20 years' experience; German, single capable of managing and taking care of private place or grounds; am an all around handy man with tools; good Christian, honest, sober and industrious; best of reference.
Key 832, care American Florist.

Situation Wanted—Near Phila., as manager or working foreman on commercial or private place; 10 years experience in growing carnations 'mums, vegetables and bedding plants; age 28; married; best of references; state particulars.
Key 828, care American Florist.

Situation Wanted—By young married man, German, as foreman and grower of carnations; can also grow roses and other plants; am strictly sober and good worker; when writing state highest wages you are willing to pay, also full particulars.
Key 830 care American Florist.

Help Wanted—Competent carnation grower to take section under foreman.
G. VAN BOCHOVE & BRO., Kalamazoo, Mich.

Help Wanted—Experienced grower of carnations and roses; state experience and wages wanted. THE BRENNER FLORAL CO.,
Shawnee, Oklahoma.

Help Wanted—Expert store man and decorator; must have ability and be of good address; state salary and former employers.
L. F. DARNELL
1035 Prospect Ave., Cleveland, O.

Help Wanted—Florist for general greenhouse work; experienced in propagating potted plants and care of outdoor work; if married man can furnish residence; first-class opportunity.
NEAL & CO., Lebanon, Ind.

Help Wanted—Experienced seedsman especially for house work on garden seed and packet seed department; also to travel on the road three to four months during the season. Address
Key 857, care American Florist

Help Wanted—A good working foreman, middle aged married man preferred; no booze fighters; this is a desirable place; good surroundings and five room house.
L. SWARTHOUT, Washington, Pa.

For Rent—Four greenhouses in good condition, good home trade R. VIRUS,
1939 W. Leland Ave., Jefferson Park, Chicago.

For Sale—Greenhouse property; 10,000 feet of glass; ideal location; write for particulars to
Box 114, Lansing, Mich.

For Sale—A valuable greenhouse property in a good town; no competition; ill health.
DWIGHT GREENHOUSES, Dwight, Ill.

For Sale—Greenhouse in Salida, Colorado 6000 feet of glass, good trade, no competition; price low; address owner.
J. H. FREEMAN, Salida, Colo.

For Sale—First-class florist's establishment on the south side, Chicago; a bargain; must be sold atonce; owner leaving city. Address
Key 831, care American Florist.

For Sale—$3000 on easy terms will buy a desirable florist business in Tennessee; about two acres of ground, four greenhouses, barn, outbuildings and a nice 3-room cottage. Address
Key 838 care American Florist.

For Sale—Two firebox return flue pattern hot water boilers, used four years; will heat 6,000 ft. 4 in. pipe. Price $215.00 each. One Kroeschell pattern hot water boiler, used four years; will heat 4500 ft. 4-in pipe. Price $190.00; complete with grate bars, smoke box and ashpit doors. All in good condition. 5000 ft. 4-in cast iron pipe at ten cents per foot. 2000 ft 5-in. cast iron pipe at twelve cents per foot. Three No. 2 Morehead steam traps in good working order at $45.00 each. One high pressure steam pump 3-in suction, 2½-in. discharge; in running condition; price $500.00. Sixty Evans ventilator arms, complete at twenty cents each. Address GEORGE REINBERG, 51 Wabash Ave., Chicago.

WANTED --- At Once

A good grower of roses, carnations, 'mums and general line of pot plants; must be able to produce results; permanent position and good pay.

——Address ——

St. Louis.

GLUT OF STOCK.

The past week has seen one of the worst gluts of the year. The wholesalers wear a tired look as they see their counters filled with flowers of all kinds and little or no demand. Carnations have been selling all week at 5 and 10 cents per dozen, roses 10 cents. What the grower gets the less one talks about the better, but this state of things disgusts any one. Surely the grower would do better to dump such stock or carefully go over it and ship only the best. Outdoor flowers add to the situation, but it is to be hoped we have passed over the worst and with the throwing out and cleaning up the supply will be lessened and a more normal state of things will prevail. Weddings and graduating exercises have been the only redeeming features. The last of the month will end these and then comes the dull months.

decorations at the villa cascades and sunken gardens at the Delmar gardens by W. C. Young, Jr., on the occasion of the celebration of his father's fifty-second birthday as reported in our last notes on page 1015, issue of June 12. These decorations were very creditable. Around the tank were S. A. Nutt geraniums, bordered with Mme. Salleroi, while around the water were groups of flowers and shrubs and 20 fine vases of vines and flowering plants. The whole affair was a great success.

The Florists' Club meeting took place last Thursday; Will Young in the chair and 21 members present. The picnic was announced to take place July 21 at Ramona park. Sports and games of all kinds will be indulged in, the ball game between the wholesalers and retailers being the most important event. The retailers have determined to turn the tables and are talking loudly of what they expect to do, but the wholesalers are taking care of their end and only figure by how many runs they will win the game.

Geo. Waldbart had the closing exercises at the Mary institute; the colors were white and green. George is now receiving some very fancy sweet peas from his place at Clayton, and he has cut a great many peonies.

Alex. Siegel and Kahrs Floral Co. had special sales of carnations at 5 and 10 cents per dozen. No ferns or boxes were given with these, and all deliveries were made with extra charges.

J. Quinn has removed a few doors south near the corner of Tenney and Grand to a larger and more commodious store.

The Mullanphy Floral Co. is building a new store north of the present location and expects to run the two.

ROSES VERY POOR.

With the volume of business of midsummer proportions and every express wagon bringing more consignments it is an easy matter to figure results. Peonies and carnations are the biggest kind of a glut. What few good roses there are command good prices, the majority, however, being mildewed and growing smaller every day; in fact it would pay the grower to keep them at home as they are absolutely unsalable. Lily of the valley and sweet peas are fine in quality and find a ready market. Shasta daisies are to be had in limited quantities, Tom Windram being first in the market with these. There is a good call for green goods of all kinds with a bountiful supply.

FLORISTS' SOCIETY AND S. A. F. MATTERS.

The regular monthly meeting of the Florists' Society was held Saturday night in the club rooms with a good attendance. The time was taken up with all matters pertaining to the convention. Dan Carmichael for the souvenir committee stated that the books will be ready by July 10. Wm. Gardner for the shooting committee reported everything in readiness for the shoot and would like very much for all members of the S. A. F. wishing to compete to drop him a line that he will know how many there are to be provided for. Frank Dellar, who has baseball affairs at his fingers' ends, says he will have his ball team right on edge and we will see a fast and intelligent team when they go on the field to represent the Queen City next August.

NOTES.

Gus Meir of the Hyde Park Rose Co. is very anxious to begin throwing out the old rose plants and get the young stock on the benches but, owing to the continual rains, it is impossible to get the soil into the houses. His only wish is that we have a week of dry weather so he can get the work under way.

Quite an event in society the past week was the marriage of Chas. M. Bosworth of the J. M. McCullough's Sons Co. to Miss Natalia Breed of Grandin road. The local press furnished an elaborate account of the wedding and the young couple have the best wishes of a host of friends.

A wedding of interest to those engaged in the business was the marriage of Joseph Linfoot of College Hill to Isabella D. Ross. The wedding was a quiet home affair and was celebrated at the home of the bride on McMillan street, the Rev. James Cosby officiating.

Frank Ball and Fred Gear were two of the craft of this city to go with the Shriners to Louisville, Ky., the past week and report having had a delightful time. Frank Ball says the ball at the armory was the grandest affair he ever feasted his eyes upon.

Louis Kyrk is handling some of the best sweet peas coming into the market.

Has anybody seen C. E. Critchell of late?

The Trade vs. the School Board.

The trade in Chicago is loud in its praise of the movement started by THE FLORIST to secure the repeal of the rule now in force prohibiting the presentation of flowers at school exercises. This movement is of vital interest to every man who sells flowers, whether grower, commission man or retailer, and the success of the movement depends on the concerted action of every one connected with the trade. Continual and continuous plugging and the working of every angle is needed to accomplish any results. Simply because there is no immediate return in dollars and cents is no excuse for any man to be lukewarm. It may mean a year of fighting, but it is almost trite to say that nothing is worth having that is not worth fighting for. There are one or two dissentient voices, but these are just as welcome to our columns as those who favor the lifting of the ban, an open argument being in every sense desirable. We print below a few more comments:

ED. AMERICAN FLORIST:—

Will be pleased to co-operate with you in trying to persuade the school board to again allow flowers at the commencement exercises as in former years, and will gladly donate our share of flowers to the children that are unprovided for at the exercise.

WIETOR BROS.

ED. AMERICAN FLORIST:—

We are certainly in sympathy with the movement in progress in regard to the flower question, with reference to the school closing, at the exercises of which flowers are banned at the present time. Anything that can be done to open up the field again so that flowers can be presented to the pupils at their closing exercises will of course be a benefit to all the florists.

GEO. WITTBOLD CO.

ED. AMERICAN FLORIST:—

In regard to the matter of presenting flowers to the graduates at June commencements I beg to state that I take the view of President Schneider, and in my opinion it would not be a good idea to present flowers to the poorer children for the simple reason that the flowers donated would be of an inferior grade and the children receiving these flowers would feel slighted anyway. Probably this is not a businesslike view, but stands for my personal view of this matter.

ERNST WIENHOEBER.

ED. AMERICAN FLORIST:—

I fully believe the old rule prohibiting the giving of flowers to the graduates at the commencements should be rescinded. It seems to me the board has taken something in its own hands that is unjust in every detail. Florists of this city have felt it very much from a business standpoint. We have all looked forward to a busy month in June up to the time this unfair rule was established. Many a father, mother or friend would like to send flowers to their dear ones on this occasion, but under these existing circumstances they cannot do so. I may say here, I think there are many persons who never think of buying a bunch of flowers only once a year and that once is commencement time. I sincerely hope something will be done.

W. J. SMYTH.

ED. AMERICAN FLORIST:—

We think it is a good move in the right direction that THE FLORIST, through its representative, T. C. Yarnall, is making, in getting the trade interested again in trying to have the order rescinded, putting a ban on cut flowers being sent to children at the public schools of Chicago, for commencements. This rule was established by the late Superintendent Cooley some few years ago. Efforts were made at that time to have the order rescinded but the power wielded by Mr. Cooley was too much for the body of florists who went before the board of education. All arguments had no effect. Our committee was told that they

Roses and Carnations A Specialty.....

WHOLESALE GROWER of **CUT FLOWERS**

could pin flowers on the walls of the school rooms if they wished; that was the best they could do for us.

Now that the czar (Mr. Cooley) is no longer superintendent of schools, we hope the trade of the city will get together and assist Mr. Yarnall. The florists are losing at least $100,000 every year by this rule. Before it was in effect, the florists were busy up to July 1, with school commencements, which gave them a nice profit, and was figured on as a busy month. Now business is practically shut down June 1, excepting for the weddings.

Mr. Cooley said it was made to protect the poor who could not afford to buy flowers. We ask them, why not do away with the costly fads like collecting and exacting money in schools for pictures, statuary, etc., and give the poor cheaper books? Why this class legislation against one line of business and not against others? The school board should see that the children end the school year with as much happiness as possible. It is the one thing children talk about and work and long for, months before; and when the last words are spoken and they are applauded, why deprive them of receiving a bunch of flowers, which is so appropriate and makes their hearts glad? POEHLMANN BROS. CO.

ED. AMERICAN FLORIST:—

May a New Yorker, who admires the progress of the west, butt into the controversy concerning graduation flowers? In your issue of June 12 I notice but one side given, that of trade. There appears to be considerable soreness evinced in the letters giving rise to statements that "there is no such thing as equality in this life," and "Ex.-Superintendent Cooley's position smacks too much of socialism."

I think that every florist realizes that the public in general has one best bet up its sleeve, and that is this: In dealing with our craft they are not oversure in confidence of "such things as equality," nor do our business exactions "smack of socialism." A craft which as a general practice will make public by talk and the trade papers monetary and other details of funeral orders, for instance, can hardly be expected to hesitate at hurting the feelings of poor children who upon one proud day of their youth must bear the injustice of having no blossoms for their graduation. For what more natural than flowers and children together, but never when some must go without. It is hoped that most of your writers have gone through a graduation in early life and not forgotten all it meant.

There is rather too much intent to consider our vocation as a bartering medium on a basis with shoestrings and peanuts instead of a calling which should demand the highest ethics in laying forth our product. If your Chicago board of education could be induced to grant each year as a necessary outlay a certain amount for floral decorations in schools at commencement time, and then after the exercises divide among the graduates some share of flowers, they would then be valued the more as, from Alma Mater; none would be slighted and I think the florist would feel more comfortable with the proceeds, if his scruples against socialism did not hold him too fast by the coat-tails whilst it urged him in the wrong direction. CARL STUMM.

Chicago.

DULL SEASON APPROACHING.

While the condition of the flower market remains practically unchanged from that reported a week ago, there has been a slight falling off in the demand all along the line that, to the man who has his ear close to the ground, presages the approach of the dull season. As is usual at this time, peonies are the prominent factor, and the abundant rain that we have had has brought one of the largest crops that have ever come into this market.

A GLUT OF PEONIES.

A great many shipments are reaching the market in such an advanced stage that it is hard to realize the charges on them, while had they been cut and shipped close they would have brought a good price. This great mass of poor stock has had a tendency to lower the price on the choice flowers, and they are not bringing what they did a year ago. This in turn has had its effect on all other flowers, and while the volume of business is possibly larger than at this time last year, the returns are not so satisfactory.

ROSES ALSO SUFFER.

Good American Beauty and some of the summer roses are in fair demand and are bringing good prices, but there is a great deal of winter stock now on the market that is mildewed and thrips eaten which is very hard to move at any price. Kaiserin and Killarney are probably next in importance, and are uniformly good, while Bride and Bridesmaid are not as large a factor as they have been.

SWEET PEAS AND CARNATIONS.

A great many sweet peas are reaching the market in very poor condition and for these there is no demand at all, while the small proportion of good stock is moving freely at fair prices. Carnations are still coming in in large quantities and of extra fine quality, considering the season, but the demand for good stock is limited and the balance is being sacrificed. In fact, any sale is a good sale and any price is a good price. While the abundant rains of the past few weeks have been especially favorable to the peony crop, it has just the opposite effect on the small outdoor flowers and they are not as plentiful as in former years; in fact, up to the present time, their presence has not been appreciably felt.

NOTES.

E. A. Riehl, the peony grower of Alton, was here for a few days this week inspecting the different peony fields around the city. He states that he has shipped over 4,000 dozen peonies to the J. B. Deamud Co. this year. In this connection J. B. Deamud says that peonies which are being cut and received in prime condition by the wholesalers are bringing good money, both in Chicago and for shipment. Other peonies which are too far advanced are being sold for whatever price they will bring.

At a meeting of the florists on Saturday, T. C. Yarnall of THE FLORIST was instructed to appoint a committee to wait on the school management committee of the board of education with a view to having the board rescind its rule prohibiting flowers at school exercises.

John Lambros has secured the concession from the Union Loop Co. to sell flowers on the loop platforms, and has been doing a thriving business the past week. He has proved a very good outlet for the overcharged market, though some of the retailers are complaining that he is hurting their business.

G. Raedlein of the firm of R. Raedlein, basket manufacturers of Weidhausen and Ebersdorf, Germany, has opened a stock room at 375 Milwaukee avenue. This house is one of the oldest in the business, having been established in 1851.

The greenhouses in Garfield park are in a dilapidated condition, and the park commissioners have asked for bids for rebuilding along the lines of the original specifications. The bids will be opened next Tuesday.

A. L. Randall left on Saturday last for Conneaut, O., to attend a family reunion. His brother Webb joined the family group on Monday. This is the first time in 22 years that the family have all been together.

Mrs. Moore, of N. C. Moore & Co., who was taken ill on the market on Decoration day, is still confined to the house. Miss Tonner is looking after her business on the Flower Growers' Market.

The A. L. Randall Co. was showing some especially fine Killarney roses this week. They stood out especially strong alongside the great mass of poor stock that was visible all over.

All lines led to the Cub ball park on Wednesday when the World's Champions raised their new flag. Leonard Kill was in the forefront of the fray.

Victor Bergman, buyer for Ernst Wienhoeber, was the guest of J. B. Deamud on a visit to the Vaughan peony beds at Western Springs on Friday.

J. G. Crozer of Cedar Rapids, who was on the market this week, reports an exceptionally good year and says he is glad he built his new houses last fall.

O. B. Stevens of Shenandoah, Ia., revisited this week the school he attended 31 years ago. He was the guest of his son while in the city.

O. P. Bassett returned on Saturday from a two weeks' automobile trip. He reports the roads around West Baden uniformly good.

Visitors: E. A. Riehl, Alton; R. R. Davis, Morison; J. G. Crozer, Cedar Rapids, Ia.; O. B. Stevens, Shenandoah, Ia.; A. Weaver, Massillon, O.; W. W. Coles, Kokomo, Ind.; H. Greensmith, Cincinnati, O.

Green Worms on Chrysanthemums.

ED. AMERICAN FLORIST:

Do you know of anything that will kill the green worm, the kind that turns into a butterfly? The worms are bad on the chrysanthemums. Tobak-ine helps to kill them.

N.

The preparation you mention is an excellent one for many insects, but for this particular grub we have found nothing so good as spraying with hot water. The proper temperature is around 130°; much less will not kill the insects while a much higher temperature will injure the plants. Arsenical sprays, kerosene emulsion and pyrethrum are also useful, and, of course, hand picking. Endeavor to keep the butterflies out of the house as much as possible to prevent their laying their eggs on the plants.

New York.*

TRADE BETTER THAN LAST YEAR.

Business has been moving along very quietly during the past week. While everything is rather slow, it is generally conceded that present conditions are an improvement over those of a year ago. Though weddings have not greatly enriched the florists, they have helped some. School commencements are expected to bring in considerable business during the remainder of the month. Happily, there is not, so far as we are aware, any ban here on the pleasing custom of presenting the sweet girl graduate with a bouquet.

The American Beauty roses that have been coming in during the past week have been of rather indifferent quality and this stock has moved slowly. Peonies are now plentiful. Though the home crop has been slow in going out, some very fair stock has been shipped here from southern points. The peonies while they last will, as a matter of course, put a damper on all other stocks.

June 14.—The market is weak and inactive this morning with falling prices. Much inferior rose stock is coming in. There are plenty of peonies but this week is likely to bring the finish of Festiva Maxima, which sells if anything in peonies can be sold. Though a few carnations are selling for three cents, $2-$2.50 per 100 are the ruling prices for the best varieties. Lily of the valley is one of the best sellers.

NO BAN ON COMMENCEMENT FLOWERS.

In this connection, we heartily sympathize with the members of the trade in Chicago who are seeking to have an unreasonable rule set aside. Possibly the people who are trying to banish flowers from commencement exercises, funerals and other public events think they are right. We have no doubt that those, in the years and centuries that have passed, who upheld human slavery, religious persecution and kindred horrors, also believed that they were right. Considering the amount of what the colored preacher called "low down cussedness" that must be combated in this country of ours, we think that preachers and teachers cannot do better than to fight it with renewed vigor, without wasting their energies on innocent and pleasing customs.

NOTES.

Aloysius Gross, who shot and killed John Scott, the well-known Brooklyn florist, created a great sensation in part five of the supreme court, before Justice Maddox, on June 14. Gross had been permitted to plead guilty to manslaughter in the first degree, the maximum penalty for which is 20 years in prison. He was remanded for sentence on the above named date. Greatly to the surprise, apparently, of his attorney, Edward J. Reilly, as well as others in court, Gross asked permission to withdraw his plea of manslaughter and take his chance at being tried for murder. Justice Maddox ordered Gross back to jail and directed him to prepare for trial in two weeks.

Miss Ella Ballard, for the past four years bookkeeper for A. H. Langjahr, the well-known wholesaler of 55 West Twenty-eighth street, died in Brooklyn June 11. About a month ago, on account of failing health, she resigned her position and since then, it is understood, has been under medical treatment. Miss Ballard was a faithful and efficient young woman and her kind and engaging manner won her many friends who sincerely mourn her untimely death.

The venerable N. Hallock of Queens was an interested and interesting visitor to the peony exhibition. Mr. Hallock formerly owned the land now known as the Cottage Gardens. Though now 87 years old, he would easily be taken for a man of 60 or even less. The late lamented E. V. Hallock was his nephew.

E. Allen Peirce of Peirce Bros., Waltham, Mass., was in the city June 12 to 14, and visited the peony exhibition at Queens. The Peirce Bros. are noted throughout New England for the great crop of Easter lilies which they annually send to market.

Schedules in bankruptcy of the Fleischman Floral Co. show liabilities $108,991, and assets $20,748, consisting of cash $65, stock $4,000, fixtures $5,000, autos, wagons and harness, $4,400, and accounts $7,283, due from about 300 customers.

Far be it from us to do any "knocking;" nevertheless, it did seem that leading men of both the wholesale and retail trade of this city might have taken more interest in the peony exhibition, as it was held almost at their doors.

Alexander Scott, Sr., member of the firm of Robert Scott & Son, Sharon Hill, Pa., was a visitor during the peony exhibition. It will be recalled that the rose, Mrs. Jardine, was disseminated from the Scott range.

Professor John Craig of Cornell University came down from the nurserymen's convention in time to visit Queens, where he efficiently presided over the deliberations of the American Peony Society.

Robert M. Schultz of Madison, N. J., is shipping to J. K. Allen a remarkably fine line of Richmond roses. These are deserving of special mention, as is this season Richmond is, as a rule, very poor.

W. A. Peterson, of Chicago, who has been here attending the peony exhibition and convention, was not well pleased on account of his peonies not being in bloom in time for the exhibition.

Walter F. Sheridan is handling very fine tea roses considering the lateness of the season. Mr. Sheridan is not a man who wants the whole earth, but what he does get he wants it to be A1.

John Seligman of West Twenty-sixth street is smiling. To be sure that is not unusual for John, but this time the cause thereof is a baby boy and all doing well.

Wm. Enggren of Woodhaven, who is a familiar figure in the flower markets of the Coogan building, visited the peony exhibition at Queens, accompanied by Mrs. Enggren.

Peter F. McKenney, formerly with Chas. Thorley, opens his new store this week at Fifth avenue and Forty-second street.

Mrs. Emma Jackson was granted a divorce from her husband, Andrew Jackson, of Fulton street, June 9.

*Remember the Florists' Club outing July 1, and make no arrangments that will interfere with your being p esent.

New York Florists' Club.

The regular monthly meeting of the New York Florists' Club was held on the night of June 14 in the Grand Opera House building, with a good attendance. Resolutions on the death of Herman Dreyer, a member of the club, were read and adopted; also resolutions on the death of John Scott.

The committee appointed at the May meeting in relation to a plant market reported. It is its wish to secure a permanent lease on the ground now occupied at Canal and Washington streets, and they ask the co-operation of the club to assist in maintaining the present site, without compensation or graft. John Birnie and Charles H. Totty spoke in favor of the report and suggested A. L. Miller, a member of the club, as a suitable man to wait on the board of aldermen and properly state the situation. On motion the following committee was appointed to wait on the aldermen: A. L. Miller, Anton Schultheis, Herman C. Steinhoff, John Birnie and Frank Traendly.

Frank Traendly, for the transportation committee, reported that the Central railroad of New Jersey and the New York Central railroad had agreed to make a one-way rate to the S. A. F. convention at Cincinnati of $15.15.

Chairman Bunyard of the outing committee reported progress. Gratifying success has attended the efforts of the committee in securing contributions for prizes. The souvenir will be ready in one week.

W. A. Manda, South Orange, N. J., exhibited a fine collection of flowers of hardy herbaceous plants, including Dianthus deltoides, D. crystal, D. albus, Country Lassie and Crimson Eye. Also Aquilegia chrysantha and Campanula celtidifolia, for which he was awarded a cultural certificate.

W. P. Roy of 15 Barclay street, Chas. Peters and Wm. Peters of Hempstead, N. Y., were proposed for membership in the club. There was a spirited discussion over the appointment of a nominating committee. F. W. Wagenfohr thought that nomination should be from the floor. Patrick O'Mara said that the fact of nominations being made by a committee deprived no member of the right to vote for whom he pleased, and he added that the members had a month to think over it. After considerable discussion, part of which was amusing, the following nominating committee was appointed: Chas. Weathered, Chas. H. Totty, J. A. Manda, Jas. McManus, W. J. Elliott, John Birnie and Harry Bunyard. The following committee was appointed to prepare suitable resolutions on the death of Chas. L. Allen: Patrick O'Mara, W. A. Manda and — Hendrickson.

Samuel Luba, an employe of the department of city parks, asked the co-operation of the club in securing the park gardeners a wage rate of $90 per month; $2.50 per day is the present wages. Robert Berry spoke in support of Mr. Luba's request and scattered some fine bouquets of oratory in this connection. The matter was referred to the legislative committee. This was the closing meeting for the season and adjournment was taken till September. In the interim, many things are likely to happen.

BUSINESS DULL.

Business is fast getting down to a summer basis, as most of the regular buyers of the season are now out of town. There are still a few commencements with the usual dinners of the alumni. There are also a few weddings. "Bon Voyage" messages use up some of the choicest blooms, and with the usual demand for the last rites, the supply is still far from exhausted, and the street men clean up the balance at their own prices. The market is without feature, except possibly that the cattleyas, which were quite plentiful for a week or two, are now quite scarce and held firm at from 50 to 60 cents each. The bad weather of the past few days was hard on sweet peas, which come in in poor shape; in fact, everything seems to be lacking in quality and will retrograde rapidly from now on. Lily of the valley and Easter lilies may be cited as exceptions. Some of the retarded Easter lilies are very fine, as if they were improved by their long rest. A few fine gladioli are coming from down east, where the climate puts a finish to the flowers that is not possible about here at this season.

ROSES AT DREER'S.

The H. A. Dreer Co. at the nurseries at Riverton, N. J., is now trying out all the new roses that are recommended for outdoor culture, and Jacob G. Eisele says these experimental rose borders are to him one of the most interesting parts of the grounds. Over 200 varieties containing a few of the tried out generally acknowledged best are placed there for comparison, the balance being the latest introductions of this country and Europe. These trial beds, which are now in their second year, will no doubt grow to be one of the features of the establishment. Mr. Eisele says it is a great pleasure to him to visit these roses early in the morning and note the beauty of the buds, as they are then at their best. He is a believer in severe pruning and nearly all of the stock had been cut to within six inches of the ground. The result was strong shoots, each bearing well developed flowers. Among the novelties in flowers on June 10 were The Lyon coral red, shading with chrome yellow in center and strong pink at the edge. It is a remarkable looking flower. Harry Kirk, a deep sulphur yellow, a superb flower and a strong grower. Ned Leon Pain, a flesh pink, Nina Barbonson, a great pink like La France. Molly Sharman Crawford, fine white. Carl Laurent, the best dark red bedder, better than Richmond or Liberty. W. R. Smith is coming to the front as one of the best. Mrs. Aaron Ward and La Detroit, which Mr. Eisele said was one of the best bedders. The following 12 varieties he regards as the best bedders for American culture at the present time: Prince of Bulgaria, Farbenkonigan, La Detroit, Mme. Ravery, Kaiserin Augusta Victoria, Antoine Rivoire, Mme. Jules Grolez, Vicountess Folkestone, Caroline Testout, Richmond and Killarney.

A curious condition has been discovered in water lily culture. Many of the varieties seemed to fail in their ponds, which was attributed to various causes, but nothing definite was determined until it was noticed that those allowed to remain in pots when planted were uniformly good, while the plants set out in the soil of the bottom of the pond made but a feeble growth. On examination it was found that the soil being very light the roots sank into it, dragging the crown down until the plant smothered. Now the pots are not removed and the growth is uniform, all varieties doing well. Nephrolepsis Scholzeli, the crested Scottii, has had a great sale, Mr. Eisele's prediction that it would become a favorite with the public being fully demonstrated. Cibotium Schiedei is also sold up almost to the last plant, orders having been booked a year ago for this fall's delivery. A customer last week left an order for 200 plants for the spring of 1910. Moral, grow the good things and they will sell themselves.

NOTES.

The large greenhouse operations in the neighborhood of the city are going forward rapidly. The Florex Gardens have their large house under way; a new system of scaffolding is being erected, a portion of the wall is up and a very large cistern or underground concrete basin is being excavated. This is for manure water, which will be forced through pipes to all parts of the house. Rob't Craig is making good progress and will soon have three houses ready for the glaziers.

Niessen's was a busy market on Saturday, carnations going out by the 5,000 and 10,000 lots. A very fine line of cattleyas is seen here.

Wm. McKissick & Bros. are handling choice gladioli. Their eastern American Beauty roses are also in good demand. K.

Boston.

BUSINESS DULL.

We are in the throes of the annual dull period of summer. There still remain two weeks in which some business is expected, but so far commencements and graduations have developed nothing in the way of business. Many have made their exit to shore and country resorts and even funeral work is coming slowly. The markets are swamped with all sorts of indoor flowers; peonies and lily of the valley are the only outdoor products of any consequence, and neither can be depended upon owing to the varieties of weather we are experiencing. Carnations are coming in by the thousand and the demand makes no impression on the surplus. Roses are overabundant and lacking in quality. Much difficulty is experienced in getting first grade American Beauties, though plenty of medium length and unattractive stock is available. Frame lily of the valley is found on every street corner at 50 cents per bunch of two dozen sprays. Sweet peas are very poor and until something better is found buying will be only under protest. In other years at this time a really attractive line has been open, and proven its popularity, but the present stock conveys no satisfaction at either end.

NOTES.

The beautiful estate, Holm Lea, in Brookline, in the height of all its renowned beauty, was opened to the public June 12-13. This estate is among the finest in the country and with its lakes and gardens is unsurpassed as an example of science and architectural skill. Hundreds of the finest varieties of rhododendrons and azaleas were seen in full bloom, easily outshining the envious collection of superb rarities planted within the grounds. Through the public spiritedness of the host, Prof. Charles S. Sargent, thousands of enthusiasts availed themselves of this annual opportunity of viewing these attractions.

Henry Penn, the Bromfield street retailer, has selected the north shore as his favorite summering resort, and is comfortably located at Nahant. Within easy reach of his place of business, traveling by means of his automobile and with ideal opportunities for recreation in his newly purchased power boat, the summer months will be rapidly passed over, without neglect of business.

"Dud" Hartford, the veteran outdoor lily of the valley man, is distributing an excellent product this year and has run far ahead of last year's marketings. Together with keeping the local market supplied regular shipments are being made to New York. The season is but a short one and a general clean up is due next week, when "Dud" retires for another year to his farm in Bedford.

Elijah Wood, the acknowledged leader among peony growers, is shipping to market an excellent crop, including the finest blooms known. His particular favorite, Festiva Maxima, is showing itself slowly, but this week should bring the flowers out in the pink of condition. B.

Baltimore.

WEATHER DEPRESSING.

Rain, rain, and more rain, not torrid downpours, but chilly easterly storms which have been more like March than the tropical showers supposed to be customary at this season of early summer, although now some delver into past records discovers that June is almost always a month of rain, and that two years ago there were only seven clear days in the month of roses. This year it has rained every day save two. This caused quick growth outdoors, but inside nothing has done well, and in many establishments mildew has been rampant, the night temperature once or twice going down to 54°. One consequence of the fierce storms has been large destruction of strawberries and early cherries, which have rotted under the continuous wet. Trade has been unsatisfactory, due mainly to the depressing effect of the damp chilly weather.

JUNE WEDDINGS.

The wedding list has been a long one, but as a rule no very elaborate decorations have been reported. Geo. N. Black had an order for a beautiful lawn wedding at Catonsville (the Mergenthaler-Feldner nuptials) which the elements threatened to wipe out, but at the last moment a huge tent was ordered, a floor laid and a fine effect provided by the abundant use of evergreens and pot plants, southern smilax and a profusion of flowers. A temporary altar was erected and the ceremony lost none of its beauty and attractiveness due to the temporary character of preparation, and Cupid once more beat out old Jupiter Pluvius.

COMMENCEMENTS.

Commencements now have the call. In some cases the invitations bear the legend, familiarly connected with funeral notices, of "no flowers," but the rule was the other way and a great many bunches are seen at all the ceremonies. Most of these are of the less valuable grades of blossoms, peonies predominating, but this showy flower suffered greatly from the wet season.

Your correspondent is told he hardly estimated the amount of business done this year on Memorial day at its full extent, the result being, generally, quite as satisfactory as former years. It seems that the ceremonies and private decorations of graves was so spread over Saturday, (a half-holiday here) Sunday and Monday that the impression made upon the observer failed to show the extent of the demonstration. Confederate Decoration day does not make much of an element in trade circles here, though the community contributed quite as many soldiers to one army as to the other, but the practical absence of organization which perpetuates the memories of the lost cause accounts largely, probably, for the comparatively meagre celebration.

NOTES.

The extension of our system of parks puts the city in the very foreground of American cities in the provision made for public pleasure grounds and breathing spaces for the people. In the vast suburban development which has been going on for several years the park board has shown foresight in securing for every section lands for new parks before their prices became exorbitant or prohibitive. A million dollars appropriated to this end has been largely drawn upon, the four sections, geographically considered, of the city getting about an equal share; the disbursements for the year amount to $728,000, of which $265,000 was for the land purchases. The development and improvement goes along with all at once, but naturally this is a measure of gradual results. But whilst the extension work has gone on apace, the improvement and beautifying of the older parks keeps up with it, and on every side may be seen evidences of advanced ideas. As illustrating how every taste is provided for, it may be noted that at Patterson park on the eastern side of the city, the extension includes athletic fields and a swimming pool, the amount expended to date being over $55,000.

Frederick C. Bauer, of Govanstown, whose experiments and success with Harrisii lilies, which have been heretofore alluded to and illustrated in THE FLORIST, continues his operations along the lines he established. This year he has raised many more seedlings, encouraged by the promising character of his former crossings. His crop of lilies this year were, as a rule, extraordinarily healthy, of good substance and fine size. There was naturally, some variation in the products, but the comparison between these and the uncertain health of the imported bulbs, encourage him to persevere in his undertaking. S. B.

Pittsburg Florists' Exchange

15 Diamond Sq., PITTSBURG, PA.

Glen Cove, N. Y.

The Nassau County Horticultural Society held its regular monthly meeting in Pembroke hall June 9. There was only a fair attendance owing to the unpleasant weather. Vice-President Elmslie occupied the chair in the absence of President Everett. A great deal of business was transacted. Final arrangements were made for the summer show which is to be held in Pembroke hall on June 23. This is the first summer show that the society has held and everything possible is being done to make it a success. The society intends to hold an annual summer show in future.

Preliminaries were discussed regarding the dahlia and chrysanthemum shows. M. Dean, Glen Cove, offered a silver cup for the best collection of dahlias shown on long stems. Mr. Dean's idea in offering the cup is to encourage the culture of the dahlia as a cut flower. The fall exhibition is to be held the last week of October this year instead of in the first week of November as formerly. The monthly exhibits, as usual, were of a high order. The judges for the month were Messrs. Duthie, Garrett and Holloway. S. J. Trepess exhibited a yellow carnation seedling. V. Cleres was awarded honorable mention for an exhibit of May King lettuce. H. Turner, Castle Gould, Wm. Millard, Oyster Bay, and Wm. Marshall, Glen Cove, have been asked to act as judges at the rose show. J. Hearn, Roslyn, was elected to active membership.

W. H. MACKENZIE, Sec'y.

The Seed Trade.

American Seed Trade Association.

Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1908.

CHAS. P. BRASLAN is in Washington and New York this week.

NEW YORK.—F. H. Henry is leaving this week for Japan, via San Francisco.

BIRMINGHAM, ALA.—The Amzi Godden Seed Co. has built a new warehouse.

WE were in error in stating that J. W. E. Tracy was in California. He will be in Chicago about June 20.

SANTA CLARA, CALIF.—L. M. Roesch of the Fredonia (N. Y.) Seed Co., is inspecting seed crops in the valley.

THE Philadelphia North American reports the purchase of property at Fifth avenue and Buttonwood street by W. Atlee Burpee for $33,000.

SHEBOYGAN, WIS.—The New York state corporation of the John H. Allan Seed Co. has been dissolved and the business re-incorporated under the laws of Wisconsin, capital stock $110,000; incorporators E. M. Parmelee, A. L. Sommer and W. B. Lucas.

THE general average condition of crop growth, based upon crops reported to the Department of Agriculture to June 1 was approximately four per cent below conditions on June 1, 1908, but about eight per cent better than on June 1, 1907. The reports include cereal, vegetable, hay and fruit crops.

TORONTO, ONT.—The travelers, office staff and heads of departments of the Wm. Rennie Co., Limited, seed and plant dealers of this city, were entertained by the firm by a very pleasant automobile trip around the city, and to the trial grounds and greenhouses at Swansea. They were received by the veteran seedsman of Canada, Wm. Rennie, Sr., and on returning to the city were banqueted at the St. Charles, where a most enjoyable evening was spent. The chair was occupied by President Robert Rennie, who was ably supported by Secretary Thomas Rennie. The company congratulated its employes upon the most successful year in the history of the business. J. E. Killen, representative of this firm, has recently had an addition to his family in the form of a baby girl.

CHICAGO.—W. W. Barnard is quite seriously ill and is now in the hospital. His friends are very anxious, fearing some danger of blood poisoning.—Frank Moore, 41 E. Thirty-seventh place, of W. W. Barnard Co., buried his wife Monday; she died on Saturday.—Kirkeby & Gundestrup have sold their interests in their Roseland store to Z. Latimer. They report onion set crops looking fairly well despite rains. Maggots are working considerable damage, especially on fields of mixed sand and clay, seeming to enjoy the wet.—Knud Gundestrup is now in his native town, Aarhaus, Denmark, helping the citizens celebrate the one thousandth anniversary of its existence.—Contract prices on the board of trade June 16 for grass seed were noted as follows: Prime timothy, $3.90 (nominal); white clover, $16.—Visitors: J. E. Northrup, Minneapolis, Minn.; C. L. Kunz of the Madsen Seed Co., Manitowoc, Wis.

American Seed Trade Association.

The New York and southern New England delegation to the seedsmen's convention will leave New York on the Empire State express via N. Y. C. R. R. Monday morning, June 21 at 8:30. Parlor car seats have been reserved for as many as wish to take this train, provided I have notice not later than June 16. A slight saving in fare will be made if round trip tickets are purchased from New York to Niagara Falls. These are unlimited and good for stopover anywhere. Quite a large party has already made reservations with me on the above train.

WATSON S. WOODRUFF,
Orange, Conn. President.

New Seed Law in Tennessee.

Tennessee seedsmen are well stirred up over the new law. State Commissioner of Agriculture J. W. Thompson met with them at Knoxville June 1. The seedsmen complained that the new law works a good deal of a hardship on them but Commissioner Thompson gave his commendation to it in no uncertain terms. All inquiries from the seed dealers in regard to the interpretation and enforcement of the new law will be answered from the State Department of Agriculture. The following seedsmen were present: Joe Broyles, of the Broyles-Hackney Co.; S. Kaiser, of Kaiser Bros.; W. W. Scarborough, of W. W. Scarborough & Co.; F. S. Reap and Geo. Ketchen, of C. W. Henderson & Co., and a representative of Ross Bros., a seed company of Louisville, Ky. Prof. H. A. Morgan of the University of Tennessee represented the agricultural experiment station at the meeting.

Crops on Muscatine Island, Ia.

J. E. Hoopes & Co. write, June 12: "The spring was late here and we were hindered in getting our crops in the ground, but things begin to look much better now. We are finishing setting out the last field of pepper plants for our seed crops. We have had fine weather for setting out plants the last two weeks and they are starting off well. Will have more land in peppers than ever before, and hope for a good crop of seed. We are picking our Alaska peas and they are very good in quality and yield. Sweet potatoes about all planted. Musk and watermelons growing fast and beginning to start vines."

Pansies for Seed.

We have received a photograph, unfortunately not clear enough for reproduction, showing the pansy fields of Peter Brown of Lancaster, Pa. Mr. Brown annually grows a fine lot of seed and his strain is well known for its excellence. He is, moreover, constantly improving it by crossing and selection. He is to visit Europe this summer and will keep his eye lifting for anything new in pansies or any fresh ideas in their culture, and these he will tell the trade about on his return. The present season, with its cool weather, has been ideal for pansy seed development, and the quality should be unusually good.

Warranty of Insecticides.

A case of interest to those handling insecticides is that of E. P. Rand of Rayleigh, Essex, Eng., and Adam Parker & Co., Waltham Cross. Plaintiff's case was that he purchased 40 gallons of a disinfectant called destructo which the defendants' salesman said was the same as clubicide and equally safe to use but cheaper. The results of its use were, however, disastrous as when the sun came out after using it on cucumbers the leaves collapsed and the crop was more or less of a failure. A letter of recent date from the insecticide firm states: "The case in question went against us. This rather opens up the point that, if you sell goods to a fruit grower you also have to present him wtih an insurance policy on his crop."

Gov't. Flower Seeds Prove to be Weeds.

William F. Mangan is feeling bad over some fine flowers, the seed for which was sent him by Congressman F. O. Lowden. The flowers turned out to be weeds and they are running out his strawberry bed.—Sterling, Ill., Standard.

Imports.

During the week ending June 12 imports were received at New York as follows:

H. Frank Darrow, 5 cases plants.
Carrillo & Baldwin, 3 cases live plants.
Maltus & Ware, 3 cases plants.
H. Nungesser & Co., 6 bags clover seed.
F. B. Vandegrift & Co., 21 bags garden seed.
To others, 59 cases plants, 115 tubs laurel trees, 13 cases, 4 bbls. orchids, 219 bags, 10 bbls., 10 pkgs. seed.

Seedsmen's Convention—Niagara Falls—June 22-24, 1909.

The Seedsmen from Chicago and vicinity will use the Wabash road to their Convention at Niagara Falls, leaving Chicago on the 3 p. m. train, Monday, June 21st. Special sleeping car accommodations will be provided on this train for the use of delegates and their friends. The fare from Chicago to Niagara Falls and return is $19.50. Tickets will be good by lake in either direction between Detroit and Buffalo.

Those contemplating a trip to New York after the close of the Convention will be interested in knowing that the Wabash will sell round trip tickets from Chicago to New York and return at a rate of $25.50, good for thirty days, with the privilege of stopping ten days at Niagara Falls. This ticket is good for stopover also at Buffalo, Rochester, Syracuse, Utica, South Schenectady and Albany, N. Y. These tickets are also good without extra charge between Detroit and Buffalo by lake, in either direction, and from Albany to New York down the Hudson river. Apply to J. C. Vaughan, 84 Randolph street, or Wabash Ticket Office, 109 Adams street, for sleeping car accommodations.

Catalogues Received.

Leminnet Fils, Nancy, France, seeds.

Befri Seed.

The publication of the brief report by Consul-General Wm. H. Michael, of Calcutta, on befri seed, in the Daily Consular and Trade Reports, and in many newspapers of the United States, and also in England, caused several persons to write to him for additional information respecting the new discovery. After correspondence with the chief medical officer of Baroda states, he gives the following information on the subject:

"Befri plant is an annual, and belongs to the natural order leguminosæ. Its name is Indigofera glandulosa. It generally grows in black soil, and does not require much water. Befri seed is contained in very small pods, which are gathered after the rainy season is over. Befri contains 21.13 per cent of albuminoids, whereas their proportions in Indian wheat and oatmeal are respectively 13.5 and 16. In other words, befri is 56 per cent more nutritious than wheat and 32 per cent more so than oatmeal. It is ground, mixed with flour of bajri or other less nutritious grains or grass seeds, and made into breads, bhedkl, etc."

PARIS GREEN and arsenate of lead freely used is recommended by the New Mexico College of Agriculture as superior to any other spray when used against the Colorado potato beetle.

BELLAIRE, O.—G. W. Kiger reports trade dull just now but is hopeful that it will improve, in which latter case he will increase his glass, erecting a house for winter vegetables and spring plant trade.

Cultivation.

At this time of the year, cultivation is the most important subject. So much has been said and written about the value of cultivation, that we will spend no time in this direction, believing that every one who works the ground knows the importance of stirring it. We will tackle the opposite—the damage done by cultivation. As a rule operators like to work with fine tools among fine plants and coarse tools among big plants, in other words, to strike surface while plants are small and to plow deeply when they are big. This, as a matter of convenience; they are afraid that rough work will cover the young plants and they believe the big ones will stand hilling.

However, if we study root action we will very soon learn our mistake. As a plant develops its roots extend in all directions and they come very closely to the surface. Thus many plants have their main feeders between the second and fourth inch. A thorough deep plowing at a matured stage will cut off untold numbers of feeding rootlets, and to that extent damage the crop. It is estimated that the average method of cultivating corn reduces the possible yield by 40 per cent. The fact is, we should work deeply while the plants are young and do not occupy the soil, and as they mature decrease the depth until we stir the upper inch only. Proof of this can be seen by the fine crops that can be grown with the exclusive use of a wheel hoe, which will never enter the ground more than an inch. The tendency among best growers is towards more shallow tillage. MARKETMAN.

Greenhouse Vegetable Growers.

ANNUAL MEETING OCTOBER 12.

A meeting of the Greenhouse Vegetable Growers and Market Gardeners' Association of America was held recently in Cleveland, O., when plans were discussed for making its next annual meeting at Ashtabula, O., an interesting and successful one. Special committees were appointed for important work in connection with the vegetable growing business, including investigations into uniform packing and grade of greenhouse vegetables, advertising them, supplying members of the association with reports as to crops and market conditions and the programme of the meeting above mentioned.

In a circular letter sent out by S. W. Severance, secretary of the association, criticisms and suggestions are invited from all members of the association, and these are asked to work to extend its influence by personal suggestions to friends. A cordial invitation is also extended to all to come to the meeting at Ashtabula and bring friends. Briefly put, the objects of the association are to do all in its power to promote and encourage the work of greenhouse vegetable growing. The officers of the association are:

E. A. Dunbar, president.
S. J. Perry, vice-president.
S. W. Severance, secretary.
S. B. Chester, treasurer.

Richard Hittinger, W. F. Massey, W. H. Weinschenk, C. W. Waid, Franklin De Kleine and J. W. Ritterskamp are directors, and all further particulars can be had of Secretary S. W. Severance, 508 Illinois Life Building, Louisville, Ky.

Farming on Paper.

The well known writer, Wm. Dean Howells, in Harper's Monthly, calls attention to the glaring, extravagant utterances of those rustico-agriculturo magazines of popular fiction which are one of the signs of the times, both effect and cause of the back-to-the-land movement — those finely illustrated, sumptuous periodicals that in text and illustration depict rural life so alluringly. Mr. Howell says:

"You can't pry out of the American mind the twin fallacies that anybody can farm and anybody can soldier without any previous training. It takes years to be competent at either. Queer! Nobody disputes that it takes time to learn to be a mechanic, a clerk, a lawyer, a railroad conductor, but anybody can be a farmer immediately. The beginner should go slow and not rush wildly into extracting $10,000 from cabbage, $4,000 from squabs or $3,000 from Canada field peas in one year, and that the first.

"The particular thing that has caused his long-gathering wrath to burst forth is an illustrated article telling how a retired New York business man made $10,000 clear from nine acres of cabbages the very first year

LAST SALE, SO TRY AND BE PRESENT.
This Is an Opportunity Which Presents Itself Only Once a Year.

WM. ELLIOTT & SONS, 42 Vesey St., New York

he tried farming. Such an article deserves severe censure. Men with no aptitude for farming, with little capital, with insufficient physical strength, are every day throwing up good salaried positions to engage in farming, induced to do so by such articles as the one in question.

"In farming hard work, intelligence and experience are rewarded by good returns in money and greater returns in health. From reading the glossy pages of the dilettante agricultural magazines the ordinary man gets the idea that farming is a business of 'snaps,' of "good things,' that smart fellows can beat the game of weather and bugs and weeds by a little finesse and head work and that the failure of the ordinary farmers to get actually rich is due to mere lack of brains and energy. Thus lots of poor fellows are caused not merely disappointment but disaster.

"The middle-aged salaried man who leaves his position to make $10,000 in cabbages and by an unaccountable perversity of dry weather, failure of seed to germinate, flea beetles when the plants push out of the ground, caterpillars and clubfoot afterward, fails to make $10, does not find it easy to step back into a salary again."

[The above statements are equally true with respect to operations of the market gardener and the florist, and it is time that a general caution was issued against these isolated cases of great success, which give the impression that this is the average outcome of such crops. Further unhealthy and unsound competition is also encouraged which hurts those regularly established in these lines.—ED.]

Prices of Indoor Fruits and Vegetables.

The prices of indoor fruits and vegetables at leading points June 5 were as follows: New York, cucumbers, 50 cents per dozen; mushrooms, 75 cents per pound; mint, 25 cents per dozen bunches; tomatoes, 12½ cents per pound; grapes, $1.25 to $2.00 per pound; cantaloupes, $1.50 each; peaches, $6 to $8 per dozen; nectarines, $6 to $8 per dozen; mangoes, $7.50 per dozen. Chicago, cucumbers, $1 to $2 per dozen; head lettuce, $3 to $6 per bbl.; mushrooms, 40 to 85 cents per pound; tomatoes, 10 to 20 cents per pound; radishes, 40 to 60 cents per dozen bunches; grapes, Gros Colmar, $1 to $2 per pound; peaches, $15 per dozen; English melons, $15 per dozen; peppers, 30 to 75 cents per dozen; rhubarb, 6 to 10 cents per pound. Kansas City, cucumbers, 50 cents to 75 cents per dozen. Cincinnati, cucumbers, 22 to 25 cents per dozen; mushrooms, 40 cents per pound. Boston, cucumbers, $3.00 to $3.50 per box.

Plant Lice on Tomatoes.

ED. AMERICAN FLORIST:—

Our tomato crop is being hurt by small plant lice. Tobacco seems to have no effect on them. Can you give us a remedy that will kill them?

Colorado. W.

The tomato leaves sent by "W." are not affected by plant-lice, or aphides, but by a minute insect of the family psyllidæ, determined by E. A. Schwarz, a specialist of this group, as perhaps the species known as Trioza solani (Riley), a form which is known only from the Pacific coast. In regard to remedies, plant lice or aphis remedies are applicable. We would suggest either kerosene-soap emulsion or whale-oil soap solution.

C.

To Destroy Snails.

Ed. AMERICAN FLORIST:—

Please advise me what can be used to destroy snails in the garden. E.

There is no panacea for these troublesome insects. To destroy them it is necessary to keep constantly after them by trapping or by placing substances in their haunts that are destructive to them. The slime that these pests exude is a great protection to them, but soot and lime in equal proportions kept constantly in their runs will destroy them. Neither soot nor lime alone is as powerful as the two in mixture. Powdered alum is also a very effective deterrent. Traps of lettuce or cabbage leaves laid about their haunts are effective if examined regularly, and other aids along this line are to keep all rubbish carefully gathered up in order that the insects have no place to hide and keep the surface soil loose by frequent stirring.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N. Y., President; C. M. Hobbs, Bridgeport, Ind., Vice-President; Geo. C. Seagar, Rochester, N. Y. Sec'y.
Thirty-fifth annual convention to be held at St. Louis, June 1910.

BERBERIS ILICIFOLIA is a most beautiful shrub just now and all through the season, the color on the growing foliage being exquisite.

A NURSERY agent's credential is required of all nurserymen residing in Texas, and they must pay $15 inspection fee to the State Commissioner of Agriculture.

SPOKANE, WASH. — The Greenacres Commercial Orchards Co. has been incorporated with capital stock of $75,000. H. M. Adams and I. D. Brown are incorporators.

YONCALLA, ORE.—E. Drew has established the Southern Oregon Nurseries here, having purchased 86 acres, part of which is now in nursery stock, the remainder to be planted this coming fall and spring. The nurseries already run by Mr. Drew at Kellogg and Oakland will be used as branches. Mail should be addressed here.

THE new orchard and nursery inspection law of Texas, just put into force, requires all nurserymen and florists outside of that state and doing business in Texas to file with the Texas commissioner of agriculture a certified copy of the certificate of nursery inspection issued to such party in his own state. Such certificate being received by the Texas commissioner and found satisfactory and further investigation satisfying said commissioner that such firm is a responsible one and a cash fee of $5 being paid, the Texas commissioner will issue a certificate permitting the applicant to ship into the state. Every package so shipped must be tagged with a copy of such certificate.

Clematis Montana in England.

This hardy deciduous white flowering climber is now in full beauty. Introduced from Nepaul in 1831, it is well known, and its uses are many. There is nothing better for covering any unsightly corners; it is free in growth, and, though leafless in winter, its growth makes a good cover. For suburban gardens it has no equal, as it quickly becomes established, and when in flower lasts over a month. S.

Ulmus Campestris Monumentalis.

This fine variety of the field or English elm is an erect, columnar, compact grower and on this account well suited for planting in narrow streets. We noted some fine young trees of this variety in Vaughan's Nurseries, Western Springs, Ill. Carl Cropp of this firm having seen it growing on his trip to Europe and imported young stock of it. He says that, unlike the majority of elms, it keeps true to its erect habit and one knows what kind of tree to expect from it. Should it prove amenable to climatic conditions here, as seems likely, it should prove a popular park and street tree.

Rhodotypos Kerrioides.

This is such a pretty and effective shrub and flowers so early in the season that it should be more freely planted. The species is said to be not strictly hardy, but the specimen figured herewith is growing in Jackson park, Chicago, quite exposed and no protection of any kind is given in winter. It flowers well annually and the flowers are followed by the black seed pods that remain on all the season afterwards and well into the new year. When in full flower the effect of the starry white flowers on the light green foliage is exquisite and it is a clean growing graceful shrub at all seasons. Winter killing does not affect it to any great extent unless the situation is very much exposed.

Trees and Shrubs in Rochester, N. Y.

LILACS.

As we remarked in former notes this is an off year in the abundant flowering of the numerous varieties of Syringa vulgaris in western New York, but the clusters were unusually large and fine. They were about their best June 1. There is such a wealth of these varieties nowadays that it is difficult to make a selection of the best in about two dozen varieties. As we look at them from year to year our opinions about some of them are apt to change, and they do so. Amongst some of the creamy pink single kinds, Macrostachia is a beautiful form and is one of the newer lilacs. The clusters stand out boldly. Princess Maria has single light bluish lilac flowers and is quite distinct. Montgoflier with single violet purple large flowers is a good form. Christopher Columbus with single flowers that might be described as largely colored with robin's egg blue is very noticeable. Negro has single dark violet purple blossoms that are about one inch in diameter. Edmond Boisser with single flowers about one inch in diameter, and that shade from violet red to bluish lilac is a very handsome form. Charles Sargent with semi-double flowers, fully one inch in diameter, has handsome deep bluish lavender blossoms in dense compound thyrses. Victor Lemoine with double lavender bluish flowers in dense compound clusters is attractive. Maximowiczii has semi-double blossoms that are almost one inch in diameter, and shade from violet red to light purple red, in dense compound thyrses. Siebold is a most remarkable new lilac. It is one of the latest of the vulgaris varieties to flower. The double flowers are pinkish cream in bud, and when open are creamy white with a bluish tinge. There is nothing like it hitherto in lilacs. We sometimes think the Frenchmen must have reached the end of the chain in raising new distinct lilacs, but still they come. Syringa pubescens is a handsome, graceful species from China, with loose clusters of fragrant pale lilac flowers and attractive dark foliage and was in good flower June 1. S. villosa, the handsome lilac from northern China with rosy pinkish clusters, is now, June 12, in good bloom. The Hungarian lilac, S. Josikaea, with violet purple flowers, is now in blossom.

RHODODENDRONS.

At the present date, June 12, the hybrid rhododendrons are the cynosure of all eyes. Amongst some in full flower just now are Album Grandiflorum, with large beautiful blush flowers; Album Elegans, blush flowers, changing to white; Lady Grey Egerton, with large silver blush blossoms; Catawbiensis Alba, with delicate blush white flowers, a most desirable and lovely rhododendron. Mrs. John Clutton, pure white flowers; F. L. Ames, rosy pink flowers with lighter center; Mrs. C. S. Sargent (coming in flower), with deep pink blossoms; H. H. Hunnewell, deep rich crimson flowers; Charles S. Sargent, bright scarlet blossoms; Caractacus, with purplish crimson flowers; Charles Bagley has cherry red blossoms which stand out conspicuously; Roseum Elegans has rosy purplish flowers, and rarely fails to produce an abundant annual display. Hannibal with rosy red flowers is now coming in bloom, and is somewhat shy in setting flower buds. Sefton is one of the darkest flowered kinds we have, and is now coming in bloom with dark maroon blossoms.

RHODOTYPOS KERRIOIDES.
Growing in Jackson Park, Chicago.

AZALEAS.

The Ghent hybrid azaleas in a number of varieties are now in good flower, and amongst some of them are noticeably Gloria Mundi, with deep scarlet flowers; Duc de Provence, with yellowish white flowers. (Duc de Provence is described in some European catalogues as vermilion. The plants as described came from a responsible English grower.) Oscar I. with deep rosy red blossoms; Viscocephala, with white flowers; Cardinal, with pink and yellow flowers; Daviesei, with large whitish showy blossoms, a fine standard variety; Marie Verschaffelti has pinkish red blossoms, and is a charming form; Joseph Bauman, with deep red flowers, is very attractive; Altaclarense, with large deep yellow blossoms and very showy, is now past its best. Azalea calendulacea, native from the Alleghanies southwards, a most beautiful species, with deep yellow to intense orange red flowers is now in full bloom. Enkianthus campanulatus came in flower about June 3, and is still in good bloom. The drooping short racemes of dark red striped flowers present a most attractive appearance. This is said to grow to a height of 30 feet in the forests of Japan, but our plants are not more than four feet tall. It is quite hardy here. Leucothoe Catesbaei, a handsome evergreen shrub with white flower racemes, was in full bloom June 6.

Viburnum tomentosum, which opened its first flowers June 9, is now passing away, but it has been a glorious floral spectacle. V. Opulus sterilis, with its balls of white flowers, was about at its best June 8. V. Opulus flowers later than its sterile form, and is now in good bloom. V. Sargenti, whose flowers much resemble the latter, opened its first flowers June 6, and is now in good bloom. V. plicatum, the Japanese snowball, is now about at its best. V. Sieboldi, with convex white flower clusters was in full bloom on June 6. V. prunifolium, the black haw, with handsome large white cymes, was in full flower on June 1. V. Lentago, the sheep-berry, was in full bloom on June 6. V. rufidulum, with large compound cymes of fertile white flowers, four to six inches in diameter, is now in full bloom. V. pubescens, a common native species on the banks of the Genesee river, is now in good bloom and has been for five to six days.

The snow-drop tree, Halesia tetraptera, was in good bloom June 1. There are two distinct forms of this in cultivation. One form is a large spreading shrub. The other is arborescent, with much larger leaves and larger, showier flowers than the former. We have the two growing side by side, and the differences are quite obvious. H. diptera, which is not very hardy here, was in flower at the same time. Magnolia Fraseri was in bloom May 31, with creamy white flowers, and eight to nine inches in diameter. The sepals are greenish white. M. tripetala, with whitish blossoms, was in bloom June 4. M. cordata, with flowers of a canary yellow color, tinged with green, was in blossom June 4. M. paroiflora, with its lovely drooping pure white flowers and crimson stamens, has been in bloom since June 6. This lovely magnolia is a gem. M. Watsoni resembles the last somewhat, but has larger flowers on short stalks, with a beautiful crimson center and very fragrant, came in flower June 9. It is hardy here. M. acuminata, our native cucumber tree, with greenish yellow blossoms, was in full bloom June 1. M. Soulangeana nigra, which we mentioned in former notes as coming in flower May 23, is still in good bloom.

The handsome Wistaria Sinensis, with its beautiful lavender clusters, was in full bloom June 1. The white flowering variety which blossoms slightly ahead of the type is a charming vine or shrub whichever way it is treated. As a matter of fact, wistarias can be easily grown as vines, shrubs or trees, with a little training manipulation and the pruning shears. Wistaria multijuga alba, with long slender white blossoms, 18 inches in length, was in full bloom June 8.

SPIREAS.

Spiræa chamædryfolia, with white flower clusters and much exserted stamens, was in full bloom June 5. S. Van Houttei, with its drooping branches wreathed with the numerous white flower clusters, was in full bloom at the same date. S. trilobata, a low growing shrub, with flowers much resembling S. Van Houttei, was in full bloom June 7. S. Cantonensis, with its large clusters of white blossoms, was in full flower at the same time. S. Clauda, with large, showy pure white umbels, was in good bloom June 7. In a severe winter this kills back considerably here. Physocarpus Amurensis, with whitish clusters of spiræa-like flowers, was in full bloom June 6.

PRICES LOWER.

The past week has been fairly good. Prices are decidedly lower, but the amount of stock moved makes up the difference, and the supply is very large. Carnations especially are a glut and had to be sold at a sacrifice to move them. Peonies are abundant and very good in quality; many of the better grade of "keepers" are being placed in storage. The American Beauty rose crop is on the toboggan, several growers having thrown out these for replanting. Sweet peas are very scarce and the demand for same very great, but not until outside stock comes in will there be any quantity. The demand for daisies, iris, lilies and callas is very good, the quality on the market being also good. Lily of the valley is very scarce and the demand for same for June wedding shower bouquets makes this a much called for flower. Orchids are about done until the fall.

NOTES.

The coming of the Rt. Rev. John Farrelly, fourth bishop of the Cleveland diocese, was celebrated in a fitting way by the Catholics of this city. The sanctuary of the church, corner East Ninth and Superior, was banked with palms and ferns, while the church was fragrant with flowers, floral offerings being sent by many of the business men. Laurel was used largely in the decorations. C. B. Wilhelmy, 3610 West Twenty-fifth street, had the decorations in the church.

Peter Nichols leaves here June 15 for his old home in Greece. Pete will not return alone, it is said, and wedding cigars will be handed around.

Knoble Bros., 1836 West Twenty-fifth street, are putting a lot of peonies in storage at the Sheriff Street Market & Storage Co.

Smith & Fetters were very busy with the decorations for the Union club for Sunday.

B.

HAZLETON, PA.—Geo. H. Seidel reports that business with him has never been better, especially in the line of plants and shrubbery.

BLUEFIELD, VA.—Edward Schneider will establish a growing business in this city.

White Killarney

It is needless to say much about the value of this

NEW WHITE ROSE

its value is so well established. In support of this statement, we might say that we intend to plant not less than 20,000 for our own growing. We have a splendid stock of both grafted and own root plants which we can deliver immediately on receipt of order—gilt-edged planting stock. We guarantee perfect satisfaction.

Strong plants, 2¼-in. pots, own root.....$30 00 per 100; 250 for $70 00; $250 00 per 1000
Grafted plants..... 35 00 per 100; 250 for 82 50; 300 00 per 1000

"BUSINESS NECESSITY"

Edition of 1909, Postpaid, $3.00.

THIS is the only term which describes the American Florist Company's Directory, just out. This book, 548 pages of facts tersely told, is issued annually and is an aid to business and money making which no wholesaler or traveling salesman can afford to be without. It contains the name of every Florist, Nurserymen and Seedsmen, arranged both by states and towns and alphabetically; and lists of experiment Station Horticulturists, Landscape Architects, Horticultural Supply Concerns and Leading Foreign Firms. It will save many times its cost by enabling you to cover America with your catalogue and at the same time waste no printed matter or postage on dead names.

Price, in square mission tubs, $6 each.

GEO. WITTBOLD CO., 1657 Buckingham Place, Chicago.

Scented Gardens.

In bygone years scented gardens were much more the fashion than they are now, the mania for summer bedding having overcome the more sedate attraction of this particular form of flower gardening, says the Journal of Horticulture. This is somewhat to be regretted, as a good scented garden is very pleasant. Sweet odors appeal to everyone. Who has not at some time been arrested by a breath of perfume that stirs some long dormant memory, bringing back to one's thoughts a picture of other scenes, perhaps thousands of miles away? Fragrance is a very curious thing; it cannot be defined. No one can say how it is one scent attracts and another repels. Perfumes cannot be altogether confined to any one part of a garden; they are everywhere. First, of course, is the rose garden. In planting this, big flowering scentless roses are strictly tabooed; only sweet-smelling ones being chosen, such as the tea-scented roses, the beautiful singles, Rosa Damascena, Rosa Gallica, etc; many of the hybrid perpetuals, the cabbage and moss roses, the Banksians and the sweet briars if desired. Clover-scented carnations, pinks, evening primroses, lilies, and the evening-scented tobacco may be interspersed. A garden of this character is much improved if it can be enclosed by hedges or walls covered with fragrant climbers. Then there may be a herbaceous scented garden, containing such plants as primroses, hyacinths, narcissi, violets, and wallflowers in spring; followed during the summer and autumn months by heliotrope, mignonette, sweet sultan, stocks, sweet peas, bergamot, Romneya Coulteri, sweet alyssum, scented-leaved geraniums, and a host of others; while honeysuckles, scented clematis, odorous jasmine, and wistaria will cover arches and walls. Fragrant shrubs can be planted in the above gardens, or a fragrant shrubbery may be made. In this case such trees and shrubs as allspice (calycanthus), daphne, choisya, lilac, magnolia, mock orange, sweet bay, the lemon-scented verbena, and the winter sweet (Chimonanthus fragrans). The last named flowers during the dark days of December. Space should be found for such small shrubs as rosemary, lavender, southernwood, and sweet basil.

Killarney Bench Plants

Pine Trees.

Oh, the dark pines, and the dim pines, in the misty winter weather
Wreath'd with filmy lace of cobwebs, hung with raindrops tinkling low.
Oh, the green pines, and the gray pines, where the shadows crowd together,
Pines in splendor on the hillside, heedless tho' the storm winds blow.

Oh, the frost chains, oh, the snow stars, in the tossing branches gleaming.
Oh, the wonder of the pine trees when the world lies sheeted white,
Like a row of lovely ladies in the realm of fairy dreaming,
How the pine trees sweep their curtseys holding skirts aglow and light.

Oh, the green pines, oh, the gray pines, when the other trees are sighing,
And the bare boughs sway and shudder in the wild wind as with fear.
Oh, the green pines, oh, the gray pines, when the winter's slowly dying,
And the spring comes in and hails them, bravest children of the year.

Our Pastimes.

Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.

Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

At Washington.

BOWLING.

In a series of practice games previous to the convention, the five bowlers making the highest average will be chosen to form the team.

McLennon	183	205	187
Hamner	181	190	196
Caldwell	167	171	127
Simmonds	191	195	216
Dalglish	102	145	121
Ernest	149	178	177
Shaffer	185	155	183

At Chicago.

The bowlers fell down badly last Friday evening, the only respectable score being made by E. Farley, who rolled 205 in his first attempt, but fell away to nothing afterwards. The high average men of the previous week, with the exception of Henry Kruchten, who did not roll, all had an off night and their averages suffered accordingly. Even John Zeck, who can usually be counted on to stay around the double century mark, felt the effects of the slump and ran into railroad after railroad with heart-breaking regularity. The attendance was light and it is hoped that every one will make it a point to get out to be on hand this week, as every man must bowl at least 21 games to qualify for the team, which will be chosen to represent the club at Cincinnati. The 10 high average men are: H. Kruchten, 193 1-3; J. Zeck, 182; A. Zeck, 171; J. Degnan, 166; V. Bergman, 164 2-3; G. Asmus, 163; W. Wolf, 161 1-3; E. Schultz, 157 2-3 F. Pasternick, 156 2-3; T. C. Yarnall, 156 1-3.

Evergreen Conifers.

PART I.

A paper read by Samuel C. Moon, Morrisville, Pa., at the convention of the American Nurserymen's Association at Rochester, N. Y., June 9-11.

The aim of this paper shall be to encourage a more general planting of evergreens about rural and suburban homes and an enlargement of the number of species used for this purpose. I have no new varieties to exploit and no new discoveries to advance, but simply wish to reiterate and emphasize the statement that the rural homes of our country need more evergreen trees about them.

The proof of this statement must be conspicuously evident to observing persons who travel about. A farm house or country home without a touch of greenness about its surroundings in winter, lacks an important element of rural beauty. Another very important need for evergreens, particularly on the exposed quarter of a country home, is the protection which they afford as wind-breaks. The economy and comfort which such a barrier affords is not sufficiently appreciated. Fifty years ago the conifers that were planted about farmers' homes were limited to about 10 species, Austrian, Scotch and white pines, Norway and hemlock spruces, balsam fir, American and Siberian arbor-vitæs, larch and deciduous cypress. These were good and useful, and in the vicinity of ornamental nurseries they were planted more or less extensively, but there is a large field for missionary service on the part of nurserymen who employ traveling salesmen in exerting themselves to push the sale of such trees and benefit mankind and our country thereby.

I am not now arguing for the improvement of the lawns and large estates of wealthy land owners. Landscape designers and engineers take care of these and are probably doing their work fairly well. But the multitude of country home owners who are neither very wealthy nor very poor, who do not consult landscape gardeners and who have not had their attention called to some of their own needs nor learned to appreciate them, require the sympathy, encouragement and assistance of the nurserymen. Every nurseryman who raises ornamental trees for sale should have himself, or else have in his employ one who has, some knowledge about the simple arrangement and planting of home grounds and it should be his duty and his pleasure to freely assist his neighbors and patrons with suggestions in such lines.

Among the conifers to be recommended for ordinary planting I would include at least 50 species. These recommendations are based upon experience and observations met with in southeastern Pennsylvania and will no doubt differ somewhat from the results observed by those of larger experience. Long acquaintance with some of these species may cause a modification of opinion regarding them, but, as I know them at present, they are all giving satisfactory results in suitable locations.

THE ABIES.

Abies concolor, or white fir, of the Pacific slope is one of the newer conifers conspicuous by its long, light colored foliage and the light or yellowish bark on the young branches. It forms an elegant specimen and appears to be well adapted for general cultivation. It is rapidly increasing in popularity and is being planted as rapidly as good plants can be produced. Seedling plants vary considerably in shade of color, those with a bluish tint being especially valued, although all shades of them are attractive and desirable.

Abies Nordmanniana or Nordman's fir, is one of the most difficult plants to manage while young, and when well grown one of the finest conifers. I am unable to explain why the terminal buds are so liable to injury or why it is so difficult to develop a new leader when necessary, but these peculiarities and its impatience about being transplanted render it an uncertain subject, requiring especially careful treatment at all times, but the magnificence of well grown plants justifies an extra amount of care, labor and risk being bestowed upon it. Its persistent tendency to send down deep tap roots renders frequent transplanting necessary, and unless the plants are moved every two or three years, they are of little value when transplanted. Severe pruning of side branches is recommended, but never of the terminal shoot. It is to be regreted that in some localities its foliage is occasionally browned by winter, but in the vicinity of Philadelphia, in favorable situations, it is one of the choicest ornaments of a lawn.

Abies balsamea, our common balsam fir; A. Frazeri, the Carolina balsam fir; A. Veitchii, a Japanese species; A. Sibirica, better known as A. picta and A. Cilicica from Asia Minor, are five fine, dark green species of erect and slender habit bearing some resemblance to one another and all of them well adapted for limited areas where there is not room for wide spreading species. All get thin in their lower branches after a few years and thus lose much of their attractiveness. They are more useful in the hands of experienced planters for producing special or formal effects than they are for general planting, although A. balsamea is one of the best cheap rapid growers for use as temporary nurse plants or fillers in new plantations. A. Cilicica and A. Sibirica transplant quite easily, but they start growth so early in spring that their available season is much shorter than that of most other conifers.

A. Cephalonica, from Greece, is another magnificent aristocrat among its congeners. The short leaved, dull green seedlings of this species, as imported from Europe, are very inferior to some of the best specimens seen in this country which have much larger, stiffer foliage of a glaucous shade and are in every way much finer. But grafted plants of these are difficult subjects and slow to develop into good specimens. For this reason good plants are scarce and high priced, but their increased culture should be encouraged.

PICEAS OR SPRUCES.

Turning to the piceas or spruces, for the past 100 years Norway spruce has been, perhaps, more generally planted in the eastern United States than any other conifer and has been of great value. Within the past 10 years and more conspicuously within the last five years, many large and flourishing Norway spruces have unexpectedly shown signs of decline and after lingering for a few years die. Small patches of dead or brown spots appear on the leaves, giving a rusty and unsightly appearance to the tree, until many of these leaves finally drop either that year or the next, leaving the tree thin or naked looking. Small twigs and larger branches continue to die piecemeal until finally the whole tree is dead. I have heard poverty of soil, smoke and gases with which the atmosphere is charged by the ever increasing consumption of coal, fungus diseases, etc., attributed as the cause of this disorder, none of which appear an entirely satisfactory explanation, and I do not know that it has been clearly demonstrated just what is the cause of the trouble. It is a condition greatly to be regretted and for which it is to be hoped a remedy can be found, for it would be a great loss to be deprived of the Norway spruce.

There are several fine varieties of Picea excelsa possessing the good

Henry H. Barrows & Son, WHITMAN MASS.

qualities of the typical form with interesting variations. The pendulous form known as Wales Weeping, with erect trunk and long horizontal branches with pendulous branchlets, and Alata, another variety of similar character but with pendulous branchlets longer and more slender than the Wales, are both very effective. The weeping form known as Inversa, or more frequently called Inverta, is a freak, liable to assume almost any sprawling shape, and while very efective when appropriately introduced, is not of general adaptabillty for ordinary surroundings.

In P. excelsa aurea the new growth is of a fine golden hue for about one month, and is then very showy, but this color soon changes to the normal green, which differs but little from the type. P. excelsa compacta and Gregoriana form compact little bushes larger in diameter than in height, and are very useful for small yards and formal gardens where an evergreen that will stay small is needed. P. polita, the tiger tail spruce from Japan, is a hardy, dense, symmetrical plant of moderate growth, with stiff sharp pointed leaves, and is very desirable for lawn specimens in grounds of moderate size. It may possibly attain a height of 10 feet in twice as many years. It is in my grounds, the latest evergreen to start into growth in spring, a characteristic which sometimes makes it very convenient in supplying the needs of belated planters and I think it can be safely recommended for ordinary locations.

P. orientalis, the eastern spruce from Asia Minor, is a gem of this genus with much to recommend and nothing to disparage it for general use in almost any position. Elegant enough for the finest park and neat enough for the humblest cottage, and withal hardy enough to stand uninjured in cold, bleak situations where the leaves are blown off of Norway and hemlock spruces and they reduced to skeletons. Eastern spruce and Nordman's fir are indigenous in the same forests in the Caucasus, and they seem particularly suitable companions for associating in ornamental planting, the compact symmetry and elegance of habit of each harmonizing admirably and the distinctive shades of green contrasting with equal effectiveness. These two, with the addition of the silvery blue foliage of Abies Cephalonica, A. concolor or Picea pungens glauca form a trio of rare effectiveness.

THE BLUE SPRUCE.

Picea pungens, or Colorado spruce, in its various shades of green and blue, finds much favor and the choice blue specimens are admired by most persons who see them, although some seem to prefer the green shades as being more natural and more in conformity with their ideas of what an evergreen should be. It is fortunate for nurserymen that it is so, else we might be burdened with a surplus of green spruces left on hand. It is easy to graft Picea pungens on the Norway spruce, but it requires years of patient care in staking and pruning to get them into straight and symmetrical trees. The name of the Holland nurseryman, Koster, has been associated with Colorado spruce until it is looked upon by some planters as an almost essential appendage to a true blue tree. Koster's, however, is not the only desirable type and there are thousands of splendid plants in the country with the rich blue sheen and long massive foliage which are not of the Koster strain.

TSUGA CANADENSIS.

Among all the conifers there are none that can supersede the hemlock spruce in beauty or usefulness as an ornamental tree. For a lawn specimen or for effective grouping or for ornamental hedges it is equally valuable. When I was a boy my father told me to plant 5,000 young hemlocks every year I was in the nursery business. That this country never had been and he did not believe it ever would be, overstocked with good hemlocks. Among the mistakes of my business career I think I may include the fact that I have not always heeded his admonition on this point.

The weeping form known as Sargent's weeping hemlock forms a unique drooping bush. Small plants of it are not very pretty and are therefore disappointing and unsalable, but those who can be induced to plant, on the faith of another's recommendation, one of these plants in an appropriate nook, will in a few years be rewarded by a rare attraction to their garden. It grafts readily on the common hemlock.

BANGOR, ME.—Frank P. Lane has sold out his business on Columbia street and the greenhouses on Mt. Hope avenue to Carl Beers, from whom he purchased them some time ago. Mr. Beers will continue the business as in the past.

KILL PLANT BUGS and DOG FLEAS

with Lemon Oil Insecticide, adding 30 parts water. No odor, no poison—advantages over Fish Oil or Tobacco products Used everywhere If not sold by your seedsman, write WEATHERBY BROS. Baltimore, Md., for full information

Beverly, Mass.

A trip among the growers here showed them all busy putting out bedding stock for which there has been a heavy demand this spring. Owing to the coming of President Taft everyone seems trying to make their places more beautiful. We are situated in the heart of the aristocratic north shore of Massachusetts bay, one of the exclusive summer resorts of the country. All report Memorial day trade as fine, ahead of anything yet. Probably after the bedding season is over the usual summer quiet will prevail. The weather is fine.

C. S.

GLOVERSVILLE, N. Y.—Richard E. Loeben is building another large greenhouse containing about 10,000 square feet, necessitated by the rapidly increasing demand for his products. He is also thinking of opening a store down town.

Washington.

TRADE FALLING OFF.

Owing to the dull weather outdoor stock has suffered considerably; aside from this business is none too good. The sale of graduating bouquets and baskets has not come up to the standard of former years; the reason for this no one seems to know definitely. Next week no doubt will help to wind up the season, as the majority of schools will close and that means a long rest for us. Funeral work, the mainstay of the trade, has been very scarce, and June brides do not seem to be in evidence so far. Some of the retailers are putting in their summer windows, which are mostly made to represent some sort of aquatic scene.

NOTES.

David Grillbortzer of Alexandria has thrown out all his old stock and is busy getting ready for the next season. He expects to almost double his quantity of roses and carnations.

The store of Geo. C. Shaffer was entered by burglars early Sunday morning. This is the second time that this store has been robbed.

David Saunders has practically disposed of his abundant assortment of bedding plants. He makes a specialty of this sort of stock.

C. Brooke of Chevy Chase is cutting some remarkably good carnations for this season of the year. He also had some excellent peonies.

Clarke Bros. are doing well with their Carnot and Columbia roses, and claim that the demand is greater than the supply.

Alex B. Garden's stock, in spite of the unfavorable weather, is in good shape. He is sending in a lot of fine poppies.

J. H. Small & Sons show a very unique window; it is composed of a bank of rocks, with appropriate plants; at the base is arranged a pond with aquatic plants, and a half dozen young ducks make merry in the water. The ducks have been a great source of attraction. G. S.

Springfield, O.

The market for cut flowers has been rather dull, the demand not nearly equaling the supply. The Decoration day rush came up to everyone's expectations and serves as a consolation for the lull now. Carnations seem to dominate the market, although the peonies are splendid in quality, but not so much in quantity. We are pleased to see the lawns and residences showing an originality in the arrangement of bedding plants, vases and porch boxes never exhibited before; in fact, everywhere presents an air of festivity.

NOTES.

Everyone will be pleased to hear that Gustav Schneider has already commenced work on two additional new houses. Business has come rapidly to him, he having won his way into the hearts of the people here by his excellent work and courteous treatment of all. He recently made the purchase of an up-to-date delivery wagon, with a driver well uniformed to match. We feel that people in this city are becoming more and more appreciative of a well appointed turnout, even for a florist, and this addition made by Mr. Schneider is hailed with delight by all.

Opha Jackson, F. E. Good of this city and S. W. Crowell of Rich, Miss., attended the Nurserymen's convention at Rochester, N. Y. All had a very jolly time and continue with their praises of the wonderful hospitality tendered them while there. They also made a trip to Niagara Falls enjoying Natures' Beauty Spot of our great and glorious country to the fullest extent. All returned home, ready to go back next year, claiming they had a trip never to be forgotten.

Reeser & Youngstrand have completed their quite extensive greenhouses and are now ready for business. Mr. Reeser was formerly a well-known florist of this city, but sold out some time ago, imagining he was more fitted for brokerage affairs. He soon found that his flower loving nature could only be satisfied by being among and cultivating the objects of his longing, so we find him again entering the lists. He is indeed welcome and all wish him success.

S. W. Crowell, manager of United States Nursery Co., of Rich, Miss., is paying his annual visit to his many friends in this city. His arrival just at ths time came as rather much of a surprise, but none the less pleasant and agreeable.

S. F. McGrew, receiver of Fairview Floral Co., has accepted application for sale of the property, as it has been decided that same cannot be run on a paying basis.

Schmidt & Botley recently made an addition of 25 acres to their property for the purpose of growing nursery stock. C. G.

ST. LOUIS, MO.—Seeking shelter from the storm, 50 track laborers employed by the United Railways Co. "rushed" the establishment of John F. Quinn, 1047 North Grand avenue. Quinn did not accord his callers a hearty welcome. On the contrary, he tried to eject them from his place. The ejecting process resulted in a stampede on the part of the laborers, many of whom got jammed in the doorway and involved a riot call for the police. Incidentally, the laborers played havoc with the flowers and did considerable damage.

BOOKS FOR FLORISTS

The following books should be in every florist's and gardener's library. A good book on any subject in which you are specially interested is worth years of experience and should be kept convenient for reference at all times.

Send prices quoted and we send the books.

THE AMERICAN CARNATION (C. W. Ward).—A complete treatment of all the most modern methods of cultivating this most important flower. Illustrated. $3.50.

THE HORTICULTURISTS' RULE-BOOK (L. H. Bailey).—Contains information valuable to all those engaged in any branch of horticulture. Illustrated. 312 pages. 75 cents.

MANUAL OF THE TREES OF NORTH AMERICA (Sargent).—The most complete and authentic work on the subject. The pages number 826, with over 600 illustrations. $6.00.

THE ROSE.—Its cultivation, varieties, etc. (H. B. Ellwanger).—A complete guide of the cultivation of the rose, together with the classification of all the leading varieties. $1.25.

HOW TO MAKE MONEY GROWING VIOLETS (Saltford).—This is by a practical grower who has made a success of the business. No grower of violets can afford to be without it. 25 cents.

GREENHOUSE CONSTRUCTION (Taft).—It tells the whole story about how to build and heat a greenhouse, be it large or small, and that, too, in a plain, easily understood, practical way. It has 118 illustrations. $1.50.

GINSENG (Kains).—At the present time, when so much interest is taken in ginseng, it will be interesting to peruse this volume, which tells all about the plant in a way that all may understand. The 144 pages are freely illustrated. 50 cents.

YARD AND GARDEN (Baker). An excellent book treating on the method of making home gardens attractive. The author covers a wide range of subjects in quite an able manner and the book is full of interest for the amateur gardener; 140 illustrations, 420 pages, $2.

SUCCESS IN MARKET GARDENING (Rawson).—Written by one of the most prominent and successful market gardeners in the country, and who has the large t glasshouses for forcing vegetables for market in America. Outdoor and indoor crops are treated. Illustrated, $1.00.

HEDGES, WINDBREAKS, ETC. (Powell).—A treatise on the planting, growth and management of hedge plants for country and suburban homes. A volume of 140 pages, with twenty-two illustrations. 50 cents.

VAUGHAN'S SEED STORE, CHICAGO NEW YORK

To the man who needs a Boiler

THE KROESCHELL BOILER

was installed to heat over six million (6,000,000) square feet of glass during the past three years.

Expressions from the Men Who Know:

Used steam: was advised to change to your hot water boiler. Find it about half the work with your boiler. We would have no other.
STERNITZKE BROS., Park Ridge, Ill.

Have handled many greenhouse boilers of other makes but Kroeschell beats them all. I get perfect circulation in 30 minutes.
WM. OTTO, Oshkosh, Wis.

Former boiler, 16 horse power steam: as much difference as between day and night. Your boiler does not need recommendation. Will recommend itself wherever used.
THEO. F. DAMEROW, Grosse Pointe Mich.

Your boiler, in our estimation, is the best in use today. We have two of them.
POTTER & SONS, Waukegan, Ill.

When we rebuilt our plant we were undecided whether to use your boiler or a cast iron boiler. We are satisfied we made no mistake in using Kroeschell.
YEATMAN & WAY, Kennett Square, Pa.

Have fired greenhouse boilers since 1885, both steam and hot water. Yours suits me the best. I have two of your boilers. At one time I had two cast iron boilers working together and during a blizzard the rear section of one boiler gave out and the front section of the other sprung a crack a couple of months later. No more cast iron boilers for me. I came very close to freezing out in both instances. G. M. THOST, De Soto, Mo.

The Kroeschell Generator

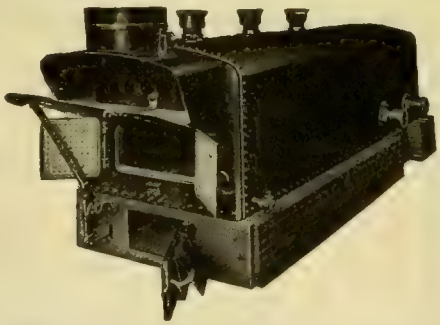
prevents boiling over, cures sluggish circulation, saves fuel, smaller mains can be used, water can be heated to 240° without boiling, increases circulation, 3 to 5 times faster; no hot water system complete without it.

HAVE YOU EVER INVESTIGATED

the one sure thing

KROESCHELL BOILERS

See the simplicity of construction. Plate material, **NOT CAST IRON.** Long fire travel, thin water ways. **The best and the most heating surface in the world for the money.**



THE KROESCHELL BOILER will give you more heat with the same piping required by other boilers, and with less fuel.

Send for our catalogue.

KROESCHELL BROS CO.

45 Erie St., CHICAGO.

THE KROESCHELL BOILER

replaced 1,346 cast iron boilers in 1905, 1906, 1907 and many in 1908.

Expressions from the Men Who Know:

We are very well pleased with your boiler. I have had fourteen years' experience in heating, six with gravity steam and eight with vacuum but give me the hot water system for all purposes. Use me for references any time.
E. LIGHTHISER & SON, Xenia, O.

Have used upright boilers, tubular boilers and cast iron boilers. Your boiler heats up better and easier than any boiler we have ever had anothing to do with. If we ever buy another boiler, it will certainly be a Kroeschell. POOLE & PURLLANT, Washington C. H., O.

I have fired boilers both here and in Europe for the last forty years. The Kroeschell is the best type of boiler I have ever used. I have two cast iron boilers, also a locomotive boiler, coupled with yours, but did not need to use the cast iron boilers this winter. Your No. 7 boiler is rated at 15 000 sq. ft. of glass and carries 25,000 sq. ft. of glass until the outside temperature goes down to 10° of frost. We have no trouble to keep temperatures in our houses with easy firing since we installed your boiler. The main flows and returns are heating our potting shed and packing room which are not included in the amount of square feet of glass. From the boiler to the farthest end of our violet houses and return is 800 ft. and circulates very quickly.
THE SALTFORD FLOWER SHOP, Wm. D. Saltford, Pres., Poughkeepsie, N. Y.

THE KROESCHELL PIPING SYSTEM

is being installed by many progressive florists. $1\frac{1}{4}$, $1\frac{1}{2}$ or 2-in. threaded pipe, or 4-in. tubing, is used. Boiler can be set on level with greenhouse walks. You do not need deep boiler pits.

The Allied Trades

Descriptive particulars—with drawings or photographs, if possible—of any new apparatus or device which may prove helpful to the trade are solicited for this department.

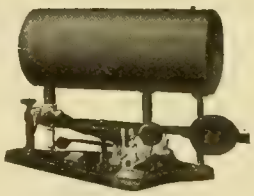
Economical Hot Water Boilers.

ED. AMERICAN FLORIST:—

Will you please inform me which is the most economical hot water boiler for greenhouse purposes, that is, one in which the gases pass under the shell of the boiler for its entire length and then return through the tubes or one in which the gases pass direct from the fire box to the tubes, the tubes being divided whereby the gases return to the front of boiler the same as in the first proposition.
M. R. T.

The kind of boiler to be used should be determined largely by the draft that can be furnished. Ordinarily a boiler in which the gases pass under the boiler and return through the tubes will give the best results, but with a tall chimney and a little more attention to firing, it will be more economical to have the gases pass directly from the fire-box to the tubes, especially if the boiler has to be forced to furnish the heat needed in the coldest weather. L. R. T.

For The Greenhouse



MOREHEAD Return Steam Traps

The present improved **Morehead Automatic Return Steam Traps** are the result of twenty years' use and development in thousands of heating and steam plants throughout the world. The "Morehead" was the **original** and has at all times been the **standard** by which the comparative values of other traps have been measured. They've stood the test for 20 years, and have gained the well-done" of all users. Will you join the ranks? **Catalogue on request.**

BUSINESS FAIR.

The past week has been a very trying one; business was fair, but could have been better. The only kick coming is the amount of stock flooding this market, the surplus being enormous. Funerals and weddings were quite numerous this week which tends to liven things up a bit. Some very fine stocks, American Beauty roses and feverfew are seen.

NOTES.

The piscatorial artists of the various floral stores are overhauling their fishing tackle and getting ready for a trip to the far north, among the lakes.

The United Floral Co. reports everything moving nicely and some very fine carnations are being cut.

Nicholas Harris, of Harris Bros., sails for Greece shortly. We do not look for him to return alone.

Anton Krut, of Butler, reports Decoration day trade good and is starting to remodel his plant.

Frank Faulk of the North Side Market, who has been very sick, is back at his post again.

B. F. Engle of Rochester, Pa., has had several large weddings the past week.

Butz Bros., of New Castle, are growing some fine Cattleya Mossiæ.

A. W. Smith is having an enormous run on plants.

We can supply in any size or length and in carloads or any quantity

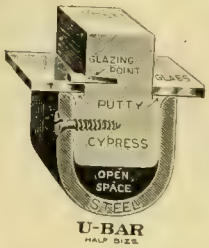
THE ADVANCE CO.,
RICHMOND, IND.

Lenox, Mass.

The regular meeting of the Horticultural Society held June 5 was largely attended, President A. Jenkins occupying the chair. J. Cant, W. Green, W. McGregor, and L. C. Peters were elected active members of the society. An exhibit on which special praise was bestowed was a magnificent vase of extra fine varieties of Odontoglossom crispum exhibited by A. J. Loveless; the flowers were remarkable for their size and substance, some of the spikes being fully three feet in length, and we question if a finer exhibit of Odontoglossum crispum varieties has ever been seen in Berkshire county. They certainly reflect great credit upon the grower, and were unanimously awarded the society's highest award, first class certificate and cultural commendation. Mr. Loveless gave a short talk on orchid culture, which was greatly enjoyed by all present. E. Jenkins was awarded a diploma for a fine vase of Gladiolus Golden West.

We were all pleased to welcome back Geo. Foulsham, who has lately been appointed to take charge of W. B. D. Field's estate and gave an interesting description of his recent sojourn in Savannah, Ga. He also spoke of his recent visit to Messrs Charlesworth's orchid nurseries in England. The following firms have generously donated premiums towards our fall exhibition: A. T. Boddington, R. & J. Farquhar, W. W. Rawson, Scott Bros., Bay State Nurseries, Bon Arbor Chemical Co., Pierson U. Bar Co., Howard & Morrow, Hews & Co., Lager & Hurrell, Peter Henderson Co., W. E. Marshall Co., Chas. H. Totty and Julius Roehrs Co.

G. H. INSTONE, Secy.



About That New Catalogue of Ours

A year and a half is a long time to be getting out a catalog, but when you gardeners and superintendents see how complete it is in every detail — what an unusual collection of illustrations and practical plans are shown, and how beautifully it is printed, you will agree with us that it is worth all the time it has taken.

Rather than keep you waiting for the entire catalog, we are binding up sections of advance sheets as soon as they come from the press, and mailing out these sections separately.

If you want to know why the U-Bar Greenhouses are the best houses built — the ideal construction for parks, private places and florists' show rooms — why no other concern can build a house that approaches them in lightness, attractiveness and durability, just send us your name and address, and let us know what you are thinking of building, and the first section of 64 pages will come to you by return mail.

Our Supplements.

Subscribers should see that they get copies of the fine supplementary illustrations showing high grade design and decorative work. These fine supplements appear with each issue and should be carefully preserved, as they mean much to the retail florists in dealing with their customers, illustrating as they do the various kinds of work that the everyday florist is called upon to perform.

The papers in which the supplements appear should be likewise preserved, as they contain much valuable data with regard to these special illustrations. Subscribers should see that they get every issue as otherwise they may miss some of this high grade work.

AMERICAN SEED TRADE ASSOCIATION.

Twenty-Seventh Annual Convention at the Clifton House, Niagara Falls, Ont., June 22-24.

Tuesday Morning's Session.

The first session of the American Seed Trade Association convention met in the convention room of the Clifton House, Niagara Falls, Ont., June 22, with nearly 100 members present. President Woodruff's very able and complete address was given close attention, and at its conclusion met with a most hearty round of applause and a vote of thanks was proposed by Burnet Landreth.

Secretary Kendel's report showed that the total membership in June, 1908, was 155. At the Detroit convention 12 members were received into the association. Five have resigned or otherwise dropped, making the net gain seven, with a present membership of 162. The treasurer's report showed a good cash balance on hand. The feature of this session was the very complete report of Chairman Geo. S. Green of the legislative committee, before discussion of which adjournment was taken for luncheon. New members proposed at this session were the Corgell Elevator Co., Minneapolis, Minn.; Williams Seed Co., Norfolk, Va.; Edw. C. Foltz, Southern Seed Co., Louisville, Ky.; D. B. Gurney, Yankton, N. D.; the Northern Seed Co., Valley City, N. D., and H. A. Scuethorpe, Port Hope, Ont.

Tuesday Evening's Session.

Wholesale grass seed dealers, clover seed dealers and members making a specialty of grass seed, to the number of 30, met on Tuesday evening with Chas. D. Boyles in the chair. A committee of nine was appointed to report on the advisability of formng a wholesale grass seed dealers' association having for its object such measures for the protection of that branch of the trade as in their judgment seemed advisable. A committee consisting of Messrs. Wood, McCullough and Lupton was formed to urge irrigation experiment project at Washington. Professor Zavitz of the Ontario Experiment Staton read a paper on root crops, Edgar Brown of the Department of Agriculture, Washington, D. C., made an informal talk on the seed testing work of the department.

Professor L. H. Bailey personally read his paper on "Rural Progress" on Wednesday afternoon. It was received with great interest. At 2:30 the whole party, including ladies and guests, took carriage rides to the American side, visiting the prominent establishments there. Many took the Gorge ride in the evening. On Thursday forenoon the election of officers will take place.

President Woodruff's Address.

This twenty-seventh annual convention finds us as a whole still further elevated on the swelling tide of prosperous business conditions that each of my predecessors has reported for past four or five years. As far as I can learn, not a member of our association has to report aught but a most properous and successful business year, and the fact that not a member of our national association has met with failure in business for several years, surely speaks well for the trade as a class of merchants of above the ordinary ability and integrity.

THE DEATH ROLL.

Death has claimed three of our members during the past year: Warren W. Rawson, Boston, Mass., died August 9, 1908; S. W. Flower, Toledo, Ohio, died November 13, 1908; C. L. Allen, Floral Park, N. Y., died May 21, 1909.

LEGISLATION.

We have been spared the anxiety and labor that came so severely upon President Green and his associates in struggling with the Mann pure seed bill in March and April, 1908, and as far as federal seed legislation is concerned, the immediate future seems to offer no special resist-

ance. However, Mr. Green, chairman of committee on seed legislation, has, with characteristic diplomacy, worked out a draft of a bill which he will tell you more about in his report later on. A persistent wave of state legislation has occupied the attention of many of our members in the various states, and we are greatly indebted to those members who have so unselfishly and strenuously exerted every effort by giving their time and means in the rush season to successfully for the most part, shape state legislation in a safe and sane direction.

Bills regulating the sale of agricultural seeds have been introduced in 1909 and sessions of the following named state legislatures: New Hampshire, Wyoming, North Carolina, North Dakota, Michigan, Missouri, New York, South Dakota, Wisconsin, Iowa, Rhode Island and Minnesota. New Hampshire required a guarantee of the purity and germination of all agricultural seeds; Wyoming a label classifying seeds "pure," "uncleaned," or "mixed." "Pure" seeds require an arbitrary standard of purity and viability, and the other two classes freedom from certain named weed seeds. Applies to all seeds.

North Dakota applies to all seeds, freedom from certain named weed seeds. Seeds must be true to name. Not applied to unclean seeds. The Michgan act guided by the efforts of seedsmen, applies to all seeds except corn, peas, beans, cucumbers, melon, pumpkin and squashes; not more than two per cent of certain named weed seeds and the seeds must be five per cent pure and variety named, but leaves the whole matter to the discrimination of the director of the agricultural station; Missouri applies to all seeds arbitrary standards of purity and germination; Wisconsin, all seeds, label containing the purity and the germination; Rhode Island, standard of purity and germination. I have not before me the bills from North Carolina, Iowa and Minnesota, and as to New York, South Dakota and Iowa, the bills have been in the hands of local seedsmen and if not changed to suit seedsmen, bills have been killed.

BILLS THAT HAVE BECOME LAW.

Bills have become laws in the following states: New Hampshire, Wyoming, North Carolina, North Dakota, Wisconsin. The Michigan bill was recently passed by the house of representatives and was before the senate, but I am not informed whether bill was finally passed before the legislature adjourned or not.

We now come to what I consider one of the most serious matters for consideration that our association has ever had to face. I might go so far as to call it a crisis, viz.: The subject above alluded to at length, seed legislation. In President Green's address last year one of the most important features was his discussion of legislation affecting the sale of agricultural seeds. His urgent recommendation that the most important work of opposing unwise legislation or advocating reasonable legislation was promptly and unanimously adopted by the convention by the appointment of a committee of seven, a consolidation of the two former standing committees on seed legislation and seed adulteration. This committee of seven in the last year has done a great deal of valuable work and its members deserve the sincere gratitude of this association in their able, unselfish devotion of valuable time and strength to the cause so wisely placed in their hands. It is a self evident fact that the committee's efforts have materially assisted in some states to avoid the enactment of undesirable legislative acts.

It is true that about nine states, prior to 1909, enacted statutes affecting seeds, but this current year, 1909, has been notable for the wide spread interest in this subject by legislative bodies. So many seed bills have been filed, some fairly reasonable in their requirements, but most of them so severe that a contemplation of the effect of such laws, if passed generally, on the legitimate seed trade is not merely disquieting, it is alarming. Within the past year these bills have been introduced in the legislatures of 12 states and eight states have placed in their statute books so-called pure seed acts. In one state, the statute requires a guarantee of the percentage of both purity and germination of all seeds, a warranty which seed organizations and seed growers and merchants generally have after careful, and mature consideration deemed unfair, impracticable and impossible. Already from that state are coming demands on seedsmen in other states to warrant the purity and germination of their seeds. As most legislation is usually the adoption of the legislation of other countries or states, the example of this state, just mentioned, will undoubtedly be felt in future legislation.

Vice-President J. C. Robinson.

Popular Western Seedsman Favored by Many for President.

LICENSE TAXES.

Another state statute, besides requiring warranty of purity and germination, demands that whoever sells seeds in that state shall pay a license tax of $25 per annum. This is the first attempt in this line, which if generally followed, may entail rather a heavy item of expense to seedsmen doing a large interstate business. The constitutionality of this act is at least questionable but it is nevertheless a statute law, and must be treated as such until it has been thoroughly tried out. Several states have recently proposed to fix arbitrary standards of purity and viability of seeds. Such legislation is highly questionable. In Europe, where all of these questions have been prominently considered, no country has enacted by law arbitrary standards, for well known and oft repeated reasons. Other features of recent seed legislation are the elimination of weed seeds, locality where seed is grown, names of seed merchants or growers, applicability of law only to seeds sold in package or in bulk of one pound or more, severe fines or imprisonment, or both, etc. Not one statute or proposed bill adopts the principle of intentional deception. The Kentucky seed act, passed many years ago, stands alone in American statutes adopting this reasonable principle,—similar to the adulteration of seeds act of Great Britain. There is no attempt to relieve the seedsmen from the rigors of the law in the case of an honest mistake. It is hardly possible or necessary in my brief discussion of this subject to state in detail the many important features of legislation affecting our business because we all, to a greater or less extent within the past year, have had contact with the serious conditions raised by this legislative interference.

ACTIVE CAMPAIGN NEEDED.

The proper and successful method or policies to be suggested or adopted by this important association and by seedsmen generally to meet the situation are not easily or lightly determined. In the first place seedsmen are usually very busy men at the time of year when legislatures are considering these laws. It is, therefore, most trying to and almost impossible for them to keep an eye open for the introduction of seed bills if they are proposed to carry on an active campaign of objection to apparently ill advised legislation. Much more difficult is it to ask merchants individually or as officers of this association, to create and systematically conduct an organization which shall take prompt and effective notice of all bills introduced in congress and all the state or territorial legislatures in the United States. There is no question that to do this is necessary. I am told that in one legislature last winter a severe seed bill was enacted and no seedsmen in that state or any other knew about it till some time after its passage though there were, as members of that legislature, three seedsmen, two of whom were chairmen of important committees.

Another difficulty is to understand the legal effect of some of these seed bills, some of which are long, ambiguous and involved in legal technicalties and phraseology. It is highly necessary that we should have the aid of counsel who knows about the difficulties under which the seed business is carried on, who will study the question broadly, who will create and manage the work of legislative information above outlined, and who will judiciously, forcibly and opportunely present our cause preferably in the early days of framing legislation or if necessary in the courts. It is not suggested that counsel shall become the sole representative of this association. It seems wise to me that a committee of five shall be appointed by this convention here and now assembled from the members of this association, to which shall be intrusted the general work connected with seed legislation and all legal questions guided by the directions of this convention as to policies, and that counsel be retained annually under a reasonable retainer.

THE WHOLESALE SEEDSMEN'S LEAGUE.

The Wholesale Seedsmen's League is, as you all know, a corporation closely associated in spirit and in active measures with this association. In fact this association is a member of the league and has always had the closest and most satisfactory relations with it. Nineteen of the league's 22 members are members of our association, and the officers and directors of our association hold similar positions in the league. For the purpose of securing an effective organization to supply the service in legislative affairs above suggested, it is most fitting and proper for our association to join with the league in this work, our

ideas and objects being identical. At a meeting of the board of directors of the league in New York on April 1, 1909, to which were invited the officers and members of the executive committee of this association, your president and several members of said committee attending, it was unanimously voted to appoint a committee of five, styled the "committee on legal affairs," to be composed of three directors of the league who shall be members of this association and the president and members of the executive committee of this association, and the duties of that committee were carefully and clearly stated.

Curtiss Nye Smith, of Boston, Mass., was considered competent to fill the position of counsel to this committee and to the associations and he was retained from April 1 for one year at a retainer of $1200 per annum, the expenses and salary to be shared by both associations. The duties of this committee and of counsel have been fully stated in a circular letter sent in April to all members of both associations, so I shall only briefly state, to refresh your memory, that these duties are to acquire prompt knowledge of bills, affecting seed interests, introduced in congress, state legislatures, and to oppose unfair or advocate wise legislation. Counsel shall collect all seed laws, bulletins and cases, prepare opinions and, when asked, conduct, legislative hearings. Besides advising the officers of the associations, counsel will advise, without charge, members of both associations on any legal matter pertaining to their business as seedsmen except that debts shall not be collected nor cases tried by counsel except under a special arrangement of fees. A prominent firm of seedsmen, not members of either seed association, expressing their approval of this scheme, volunteered to contribute $100 annually to the expenses. Supported by the unanimous approval of your officers and members of the executive committee and by my own judgment, I gave my conditional approval of this plan, the condition being, that this convention having the whole matter before it, give its formal approval and acceptance.

I desire to add that since April, counsel has taken active measures to assist local seedsmen in their opposition to legislation in Missouri, Michigan and Rhode Island. He has written opinions, petitions, supplied lists of cases for seedsmen in litigation and given legal advice to seedsmen in their private business. He has organized, subject to the co-operation of this association in the plan above suggested, a system, quietly, quickly and efficiently to supply legislative information. His reports to the committee indicate an undertsanding of the needs and requirements of the situation and I believe he will be entirely successful in not only relieving seedsmen of a great burden of detail work but also supply us with that legal advice which will materially assist us in the important work before us. I therefore present these matters to the convention with my recommendation that this association co-operate with the Wholesale Seedsmen's League in the appointment of the standing committee of legal affairs, and the purpose for which said committee is organized and in retaining C. N. Smith of Boston as counsel for said committee and this association for the year April 1, 1909, to April 1, 1910, and that this association make a proportionate contribution as its share of the expense thereof. Furthermore I recommend that any resolutions of this convention directing or suggesting the policies of this association in regard to seed legislation or on legal matters be transmitted to the chairman of said committee on legal affairs.

Before passing this most important subject, I desire to further emphasize the necessity of providing separately laws or paragraphs governing sale of vegetable and flower seeds from those governing sale of grass, clover, and field seeds. The physical possibility to determine accurately from samples of the seed itself seeds of most grasses and clovers, and the physical impossibility of judging vegetable and flower seeds by sample, puts each in a class by itself, and consequently it is my opinion that no legislation can or should be enacted in a single act that will be either workable, fair or just.

THE TARIFF.

Next in importance to seed legislation to this association is in my opinion the tariff, and a vast amount of work has been done by the committee on tariffs and customs. To our chairman, J. C. Vaughan, in particular, is due the utmost thanks of this association for the persistent and strenuous effort he has given in calling and attending meetings in New York, Buffalo, N. Y., and Washington. Mr. Vaughan has been assisted greatly by the large number of personal letters that our members have written their congressmen and senators. The great and all important question has been the desire of the trade for specific duties in place of the present ad valorem schedule. The difficulties and objections to the ad valorem schedule are too obvious and well known to here enumerate.

At this writing no man can predict the final disposition that will be made of the seed schedule, but I am pleased to say that present indications point very strongly to the specific schedule being adopted. I have been kept informed by letters constantly from United States Senator Morgan G. Bulkeley of Connecticut of the status of the seed paragraph. On May 30, section 262 was agreed to by the senate. This section revised as it now stands reads as follows: "262 seeds.—Castor beans or seeds, 25 cents per bushel of 50 pounds; flaxseed or linseed and other oil seeds not specially provided for in this section, 25 cents per bushel of 56 pounds; poppy seed, 15 cents per bushel; mushroom spawn and spinach seed, one cent per pound; beet, except sugar beet, carrot, corn salad, parsley, parsnip, radish, turnip and rutabaga seed, four cents per pound; cabbage, collard, kale and kohlrabi seed, eight cents per pound; egg plant and pepper seed, 20 cents per pound; seeds of all kinds not specially provided for in this section, 10 cents per pound."

If therefore, the house now concurs with the senate, we shall have what we all so eagerly desire, specific duties. It is difficult to place the credit for this where it belongs; several perhaps may claim it, in fact one seedsman, a member of the association, told me a few days ago that we were indebted to one of the senators from his state for the whole seed schedule. Be this as it may, it matters not who claims or deserves the credit. The main point is to get specific duties and to use the words of a famous admiral "There will be glory enough for us all." I am firmly of the belief that the death knell of low grade seeds is sounding throughout our land, and that seeds of high grade will command much better prices than formerly, and cheap, or low grade seeds will go begging.

THE PRESENT DISCLAIMER.

I question if as many as five per cent of the planters of the nation would purchase so termed "low grade" or "cheap" seeds at any price, if they were told or knew the quality at time of purchase. I am convinced that the time is rapidly approaching when we must sell our goods under a more liberal disclaimer than we have done for so many years. No one is more reluctant than I to abandon the bridge that has carried safely, but new demands and changes will eventually force a label that is more specific, enlightening and equitable than the mere statement of a name of a variety of seed, and the accompanying disclaimer now in general use. I am well aware of the temporary injurious effect that might ensue from the use of a label specific in its statement of per cent of purity and vitality. To illustrate, some 12 years ago when the crop of

VAUGHAN'S SEED STORE, CHICAGO, WEST SIDE BRANCH AND WAREHOUSE.

onion seed due purely to natural conditions was far below the normal in vitality; I knew a house actuated by noble purpose who placed in a particular variety of onion seed a conspicuous label in addition to the regular label reading thus "This onion seed owing to unfavorable weather conditions at harvest time shows a germinating power of 74 per cent. Please make your plantings accordingly so as to get a full stand. We are sending you 25 per cent more seed than your order calls for, gratis." Admittedly, this was a fair proposition, but what of the result? Many planters returned the seed, nearly all were so suspicious that they consented to use the seed only after a voluminous individual correspondence, a rare few were thankful for the information given, and planted accordingly. This incident would almost prove the truth of the converse of the old adage "What one don't know don't hurt him." One of the most prominent and successful houses in the trade makes much of the phrase "The plain truth about seeds." Does any one question the wisdom of the elaborate use (backed up by scrutinous practice) of this phrase on the part of this successful house?

THE FREE SEED QUESTION.

Publicity is the cure for many abuses as has been so forcibly illustrated throughout our land for the past few years, and we as an association should not only welcome, but assist in every way consistent efforts to correct any abuses that may exist in our trade. The government seed shop is working on full time and doing a most flourishing and growing business. An ugly and vicious animal will often hang himself if given rope enough, and it has been my hope that this monster would ultimately sink of its own weight, but alas, on the contrary, the powers that be have elected that this congressional pet should be further nursed by increased appropriations and the amount appropriated for free government seeds for 1910 has been increased $75,000 or a total for the year of $317,960. Congress therefore forces the Department of Agriculture to expend this enormous amount of the people's money to disseminate common varieties of seeds procurable at any corner grocery store in the land, and in addition to this, nearly a like amount of cost to the postal department in transporting this vast amount of mail matter through the mails. During the last nine years our government has expended this enormous total of $2,197,800 for the distribution of seeds of which it is safe to say not 10 per cent are ever used for seed purposes. In the act making appropriations for the Department of Agriculture under the clause "For the purchase, propagation, testing, and distributing of valuable seeds, bulbs, trees, shrubs, vines, cuttings and plants, and all other necessary expenses, etc." The following sums have been provided from 1903 to 1909, inclusive:

1903, $270,000; 1904, $290,000; 1905, $290,000; 1906, $242,920; 1907, $240,920; 1908, $238,000; 1908, $50,000; 1909, $268,000; 1910, $317,960; Total, $2,197,800.

Next year, 1910, each senator, member and delegate will be allotted 20,000 packages of vegetable seeds, 2000 packages of flower seeds. These statistics are of course common knowledge, but I have reviewed them so that we may have them printed in our report for ready reference. The free seed matter has been given such careful thought and study for years by the association, and the able committee we now have on this subject may have some recommendations further than to keep up a perpetual warfare whenever a vulnerable spot shows itself. I have nothing new to recommend by way of fighting this monstrous evil.

This association put itself on record last year as favoring a parcels post, and instructed committee on postal laws to prepare suitable resolutions and forward same to the postmaster general and to the committee on postal affairs of the house and senate. I presume this committee followed the instructions of this body and added its influence and arguments to the cumulative mass of similar data before the congressional committee on postal laws.

Postal facilities at present seem to be quite satisfactory and adequate for the expeditious and proper handling of the mail matter of the seed trade and there seems to be no particular demand for any radical changes on the part of our association, and considering also the amount of work before congress that both the present and the future holds for us in the tariff and legislation, that it might be well for us to let the postal matters rest for a while without further agitation. Legislative bodies are liable to get tired if pounded too much by any one interest or organization, and the importance of the larger interests above alluded to outweigh in my opinion anything we need from the postal department. Fractional currency, the "shin plaster" if you please, would do more for the mail order seed houses than anything short of parcels post, but even this is a subject that while it is well to keep it alive in our thoughts, is very far from an achievement.

Seedhouse of O. H. Will & Co., Bismarck, N. D.

INSURANCE.

Albert McCullough presented to our last convention in a very able and well studied manner, the matter of insurance and a most enlightening discussion followed. Mr. McCullough was entirely right that we should look most carefully to this expense item in our business and made valuable suggestions. No formal action has been taken to my knowledge, but I recommend that a new standing committee of three on insurance be created for the purpose of working out the whole subject in tangible form for our next annual convention. Mr. McCullough's discussion last year was confined largely to his recommendations of grading or classifying risks. It is my opinion that a mutual plan of insurance can be worked out, possibly a mutual company formed and judging by the many hardware mutual insurance companies in the various states, most of whom are in a flourishing condition, the plan is a decided success. I was informed that a saving of from 25 per cent to 50 per cent in insurance rates has resulted from the mutual hardware insurance companies.

THE PRESIDENT OPTIMISTIC.

It has been the custom of the association to pay the actual traveling expenses of its executive committee up to an amount less $10 of the expense in attending the regular winter meeting. I recommend that the entire actual traveling expense of the executive committee at its annual meeting, also the entire traveling expense of the legal committee be paid from the treasury, and I also recommend that the chairman of the committee on customs and tariff, J. C. Vaughan, be reimbursed for his traveling expenses to all meetings he has attended for this purpose during the past year. In conclusion, I beg to state that I am an optimist through and through on the future of the American seed trade. I cannot too strongly emphasize the object of our association as outlined in Article II of our constitution, viz.: "All stand together in the effort to improve and perfect a standard of business integrity which shall include purity of stocks, honesty of representation, carefulness of obligations, and promptness of execution." Let us make quality our watchword in the fullest sense of the term, and put it in practice in deed as well as in word, and our reward will be sure and positive, if we will be the means of making two blades of grass to grow where one grew before, we will indeed leave the world the better for our having lived in it.

SEED GROUNDS OF WATKINS & SIMPSON, ENGLAND.

One-eighth Acre of Gypsophila Paniculata Compacta (Like a Dropped Cloud).

A SEED trade visitor lately in Washington believes the Aldrich bill will become a law before August 1, and that the seed trade will secure specific duties. He says it is believed President Taft will sign the bill.

Seed Legislation.—Its Uses and Abuses.

BY L. H. PAMMEL, AMES, IA.

I am pleased to present this paper to you because our interests in this matter are alike, namely, to improve the quality of seed sold in America. This means that the seller should not only secure the best seed from the farmer, but he should offer him the best that can be had. The business should be so conducted that only the best seed should be demanded by the consumer and he should be willing to pay for it. A cheap article always, or nearly always, means a poor class of goods. The passage of laws in Europe has improved the quality of seed sold to the home consumer and has thrown upon our market a poor quality of seed.

SEED TESTING.

The beginning of seed testing work was started in Tharandt, Germany, in 1867, where the pioneer worker, Dr. Nobbe, established his laboratory. At this early date Dr. Nobbe revealed some startling conditions in the German seed trade. Later other seed control stations were established in other parts of Europe. Laws were passed correcting the abuses of the seed trade, which crept into the business. On this side of the Atlantic much work has been done, but the pioneer work was done by Dr. Jenkins of Connecticut about 30 years ago. Subsequently Gerard McCarthy of North Carolina, Dr. Beal of Michigan, Butz of Pennsylvania, Deval, Selby and Hicks of Ohio, Hillman of Nevada, Roberts and Freeman of Kansas, Harvey of Maine, Garman of Kentucky, Stewart, Rolfs, Pammel and King of Iowa, Jones of Vermont, Hicks, Pieters, Brown, Key and Hillman of the U. S. Department of Agriculture, Clark, Paton and Saunders of Canada have contributed papers on the subject. These investigations have revealed the necessity of the passage of some laws to restrict the sale of seeds containing weed impurities of some kinds and to demand a reasonable standard of vitality.

There are two opposing factors in the American seed trade. One, the farmer, who is anxious to put all the blame on the seed merchant for his failures. The seed merchant, on the other hand, claims that he cannot be held responsible for the seed after it has left his hands. This is certainly true in part as to vitality, but is not true when it comes to purity. In many cases there is no excuse for selling Canadian bluegrass seed for Kentucky bluegrass. The introduction of many noxious weeds is a serious detriment to the American farmer. No doubt the farmer in many cases is responsible for the weediness of the seeds. Throughout our land the slogan of the farmer should be to clean the fields of weeds. The farmer is annually wasting millions of dollars in non-productive crops by allowing weeds to grow. The fields should be like gardens, kept free from weeds. If this could be done the seedsmen would have an easier time.

S. F. LEONARD SEED CO.'S COLUMBUS, (WIS.), WAREHOUSE. (See Page 1138.)

STANDARDS OF PURITY AND VITALITY.

My experience leads me to believe that it is not wise to pass a law fixing the standards of purity and vitality, as was done in Iowa, against my judgment, and as some of the proposed laws in other states and national law have suggested. It seems to me that it would be better to allow a commission to fix these every year; this is especially true of the vitality. Seed under the best of conditions will vary somewhat in its power to germinate, its vitality depends on so many different extreme factors. Take corn as an illustration of the changeable conditions of vitality. Some years ago the writer had some seed corn which was kept in an office. This germinated 100 per cent, but 60 days later dropped to 80 per cent. This corn was never wet or dampened in any way, yet there was a loss in vitality due to the absorption of atmospheric moisture, a small amount to be sure, but sufficient to cause respiration to proceed with a speedy loss of vitality. Seasons vary because of difference due to the amount of moisture in the atmosphere; this will change the vitality of corn or any other seed. Several kinds of mould have the power to enter the seed and so rapid deterioration is brought about. Prof. Holden has shown how poor the vitality of corn is under different Iowa conditions. Prof. Holden states that 800 samples sent from farmers in the state showed a vitality of only 80 per cent. Similar results have since been obtained from 3,300 samples, 70 per cent of which gave good strong germination, 15 per cent weak, and 15 per cent worthless.

What is true of corn also occurs in other seeds. The seed merchant must depend for his supply of seed from the farmer. In many cases the growing of farm seeds is a secondary consideration with the farmer. If the crop of clover seed promises well, the seed is saved. The seed may have been exposed to varying conditions of weather which causes a rapid deterioration of the seed. I have seen clover for seed in shock all winter or well into freezing weather. Under these varying conditions the clover becomes mouldy and hence the seed likewise is mouldy and will show a poor vitality. It seems to me that the varying conditions must be taken into consideration, and that no law can fix the standard of vitality. It must needs be changed slightly from year to year; as to purity the matter is more fixed because of the methods of cleaning, a mechanical process and yet there are some conditions that cannot always be fixed. Some new and dangerous weed is occasionally introduced and this must be dealt with at once. I would prefer to have some general law and then leave the standards of purity and vitality to the judgment of some commission. In the case of the United States to the secretary of agriculture, the seed expert and some seedsman on the commission. This would be a fair and impartial tribunal. In the case of different states the matter can be placed in the hands of the botanist, the director of the experiment station and a third member to be selected from some seedsmen.

UNIFORM LAWS.

As far as possible the different states should have uniform laws, so that seedsmen can adjust their business to the conditions imposed by law. I do not believe any law should be passed which cannot be met honestly and fairly well enforced. In the passing of laws two things must be taken into consideration, (1) the farmer who needs the seed to sow on his land, (2) the seed merchant who offers his goods for sale. The farmer, so far as my experience goes, is more interested in seeds that are free from noxious weeds. He will not buy, knowingly, seeds of clover that contain Canada thistle, and other noxious weeds. It means much to him not to have Canada thistle, dodder or buckthorn in his field. The farmer would rather sow a little more clover seed to the acre than introduce bad weeds. I have on my table a letter from a farmer in Story county, Iowa, who sowed something like 25 acres of oats which contained quack grass seed. It is hard to say how much it will cost him to remove this quack grass. It seems to me, therefore, it is well to include in our laws some forbidden noxious weeds which shall only be present in very small amounts or traces. These weed seeds should be

mentioned on a label. The person who buys then knows what he is getting. Some noxious weed seeds may find their way into the seeds by accident in spite of care. Every law should contain sections on the adulteration of seed. Every honest dealer, and I am sure that the vast majority of American dealers should be classed here, do not favor the adulteration of commercial seeds. An honest business causes an increase in trade. Substitution should not be tolerated, and I am sure this association would not sanction the misbranding or adulteration of seeds. I am sure it has exerted a wholesome influence on the seed trade and can do much more by insisting on care in this respect.

THE FARMER AND THE SEEDSMEN.

In most of the laws which have been enacted in this country and in Canada the farmer is given an advantage in the sale of seed. He can dispose of his seed to farmers or for recleaning; it seems to me that the farmer should be subject to the same laws governing the sale of seed as the merchant is. Why should he be allowed to sell seeds foul with noxious weed seeds? I know of farmers in Iowa whose clover seed contained many noxious weeds which were sold direct to the consumer. This is one way of spreading many of the noxious weeds. Should not the farmer be held responsible as much as the seedsmen?

INSPECTION OF FIELDS.

I believe it a good policy for the seedsman or some reliable expert to examine clover and grass fields for weeds before the crop is harvested. A casual inspection by an expert will easily detect weeds and fields that are especially foul with weeds should not be harvested for seed. There is no reason why the different docks, especially curled dock, should be in a clover field, because the weed is easily destroyed. It is difficult to remove all of this weed seed by any mechanical process.

EDUCATIONAL FEATURES.

The various laws which have been passed in the several states have been of great benefit in that the farmers have insisted on better seed and the local merchants have had their seed examined. I am told by Mr. Page that in many cases farmers prefer to buy the cheaper grade of seed. I am not informed, but from correspondents over the state I am inclined to think there has been a greater demand for good seed. I am inclined to think that the farmers and merchants have been more vigilant since the passage of seed laws.

The various experiment stations and the Department of Agriculture should publish more bulletins giving information about seeds. This is to be a campaign of education, not only for the seed merchants, but the farmer. It will help to clean the fields, and in doing this we have won a great battle for American agriculture. I doubt whether it is a wise plan to publish the names of seed merchants who have sold seeds that are not up to the requirements. In all of our own publications we have purposely refrained from the publication of names of seedsmen who have sold seeds not up to requirement. The publication of these facts will not better the conditions. What we need is the active co-operation of seedsmen, farmers and seed merchants. In this way we can increase the efficiency of the business. The experiment stations, farmers and seedsmen should stand on mutual ground. The nearer the seedsmen try to conform to a just law the less need for drastic legislation. May I add here, let us all pull together for ose common aim? The first great step in the right direction will be a law to inspect the imported seed from Europe, which finds its way into our markets from various sources. Some law which will stop the importation of seeds containing Canadian bluegrass, Canada thistle and dodder in clover seed, a law which will be fair to the importer. This association can well put itself on record in favor of the bill which has been proposed by Mr. Green to be introduced in Congress. I can see nothing wrong in its provisions.

UNIFORM METHODS.

Those who have had any experience in testing seeds know that most divergent results are given as the result of seed tests made by the various stations and the Department of Agriculture. Edgar Brown of the Department of Agriculture as chairman

Design for Italian Funeral.
By Frank Valentine, New York.

of a committee on Methods of the National Association of Seed Analysts, has sent out samples of various seeds to be tested in the way usually done by various individuals. The results will no doubt disagree in many ways. The statistics should be collected, compared and methods used by different individuals discussed and some uniform method decided upon. Until the methods are uniform results will always differ. I believe it would be well for this association to appoint some one to carry on a similar line of work. The methods used can be compared with the results obtained by Mr. Brown. So long as the results obtained by seed analysts differ so widely, laws cannot be effective. The personal equation always enters and this must be taken into consideration, but uniform methods must be adopted.

Convention Notes.

Lem W. Bowen is on the sick list.

Beet seed is being traded in by cable.

No authentic news from Henry Salzer's gold mine.

The secretary's report showed a net gain of seven members, a total of 162.

Peter Hollenbach looks for lower prices on onion sets if good weather continues.

The big mail order houses must figure earnings; they know when to quit the seed business.

Henry and Marshall, the only New York City delegates, kept the long distance wires hot.

Pea prospects in Wisconsin are good to date, says E. M. Parmelee of the John H. Allan Seed Co.

Read what "Parisian" writes the AMERICAN FLORIST regarding French seed crops in this issue.

Pea growers are not doing very well, but the families of two leaders in the trade spent the winter in Europe.

To this date the hotel has presented no damage claims for injuries to the decorations or the furnishings of the house.

Chas. A. Heath of the Albert Dickinson Co. must be a user of seeds himself, owning over 6,000 acres of Michigan land.

The government seed distribution arranged for this year is said to be double that of the average for the past five years.

The twenty-seventh annual convention finds many faces of the younger generation and many of the members of earlier years gone.

Nebraska growers at Waterloo and Valley report corn looking twice as good as at convention time last year. Their onion sets, about 100 acres, are looking well.

Onion set growing has extended around Chicago materially, even to Racine, 60 miles north, and to other points northwest and southeast probably 30 miles.

Visiting the farmers with an auto and giving their families a ride helps to do business, says Henry Windheim, the Nebraska grass seed man, and the farmer pays the freight.

Lester L. Morse of C. C. Morse & Co. was slightly injured in a stage coach accident in Humboldt county, California, last week; the overturning of the stage gave him a narrow escape.

J. W. E. Tracy of the Department of Agriculture is making a trip to the Pacific northwest and left Chicago June 21. Mr. Tracy is particularly interested in the improvement of sugar beets.

The first session on Tuesday morning opened with the record attendance of nearly 100 members, and though the Falls view was a trifle misty the mint in the refectory showed a fine fresh growth.

The American seed trade, Prof. Tracy said last year, may include men who sell for 30 minutes on a bargain day, 12 packets for a nickel as well as one who contracts to supply two carloads of clover per day for a month.

Those Present.

Among those present or represented we noted the following:

W. D. Affield of the Albert Dickinson Co., Chicago.
Linnaeus Allen, Floral Park, N. Y.
L. H. Archias and wife, Sedalia, Mo.
W. H. Barrett, Adrian, Mich.
Thos. A. Barrett and wife, New York.
F. T. Barteldes, Lawrence, Kans.
O. P. Beckley of J. H. McFarland Co., Harrisburg, Pa.
F. W. Bolgiano, Washington, D. C.
W. D. Bonsall, Philadelphia.
Chas. D. Boyles of the Albert Dickinson Co., Chicago.
Chas. P. Braslan, San Jose, Calif.
C. H. B. Breck of Jos. Breck & Son, Boston, Mass.
S. E. Briggs, Toronto, Ont.
Chas. S. Briggs, Rochester, N. Y.
B. F. Brown, Brown Bag Filling Machine Co., Fitchburg, Mass.
Edgar Brown, Washington, D. C.
J. D. Brown, Brown Bag Filling Machine Co., Fitchburg, Mass.
Arthur B. Clark, Milford, Conn.
F. M. Clark and wife, Milford, Conn.
W. M. Clark, Milford, Conn.
Benj. P. Cornell, of Schisler-Cornell Seed Co., St. Louis, Mo.
C. D. Coventry, of the W. W. Barnard Co., Chicago.
C. Herbert Coy, Valley, Neb.
E. F. Crossland, Toronto, Ont.
Edw. F. Dibble and wife, Honeoye Falls, N. Y.

Chas. Dickinson, of the Albert Dickinson Co., Chicago.
E. C. Dungan, of Wm. Henry Maule, Philadelphia, Pa.
Marshall H. Duryea, of Henry Nungesser & Co., New York.
A. T. Ferrell, Saginaw, Mich.
W. T. Fonda, Rochester, N. Y.
J. H. Ford and wife, Ravenna, O.
J. F. Garfat, Hogg & Lytle, Port Huron, Mich.
John F. Geary, of the Leonard Seed Co., Chicago.
A. H. Goldsmith, of John Lewis Childs, and wife, Floral Park, N. Y.
Miss Blanche E. Goldsmith, Toledo, O.
Geo. S. Green, of The Illinois Seed Co.
W. H. Grenell, Pierrepont Manor, N. Y.
Chas. P. Guelf, of the Jerome B. Rice Seed Co., Cambridge, N. Y.
Albert Guttman, of The Madson Seed Co., Manitowoc, Wis.
Albert L. Hart, of C. C. Morse & Co., and wife, San Francisco, Calif.
A. O. Hogg, Hogg & Lytle, Toronto, Ont.
Peter Hollenbach, Chicago.
Harry L. Holmes, Harrisburg, Pa.
F. H. Hopkins, Sturgeon Bay, Wis.
M. L. Hotchkiss and wife, Orange, Conn.
M. J. Huggins and wife, Pierrepont Manor, N. Y.
A. C. Johnson, of the Albert Dickinson Co., Chicago.
F. G. Johnson, of S. M. Isbell & Co., Jackson, Mich.
W. Frank Jones, Cadwell & Jones, Hartford, Conn.
L. A. Kelly, Cleveland, O.
Sec'y C. E. Kendel, Cleveland, O.
M. Kirkeby, of the Kirkeby & Gundestrup Seed Co., Chicago.
Frank P. Kiser, of E. F. Spears & Sons, Paris, Ky.
Burnet Landreth, Bristol, Pa.
W. C. Langbridge and wife, Cambridge, N. Y.
E. S. Leonard, of the Leonard Seed Co., Chicago.
W. B. Lucas, of the John H. Allan Seed Co., Sheboygan, Wis.
L. L. May and wife, St. Paul, Minn.
L. B. McCausland, Ross Bros. Seed Co., Wichita, Kans.
Albert McCullough, Cincinnati, O.
H. G. McCullough and wife, Cincinnati, O.
Henry Nungesser, New York.
Chas. N. Page, of the Iowa Seed Co., Des Moines, Ia.
E. L. Page, Greene, N. Y.
E. M. Parmelee, of the John H. Allan Seed Co., Sheboygan, Wis.
J. L. Peppard, Kansas City, Mo.
W. T. Phillips and wife, Toledo, O.
Fred S. Plant, Plant Seed Co., St. Louis, Mo.
F. S. Platt and wife, New Haven, Conn.
R. Pommer, of D. I. Bushnell & Co., St. Louis, Mo.
P. J. Quilter and wife, Binghamton, N. Y.
Jerome B. Rice and wife, Cambridge, N. Y.
Miss Marguerite Rice, Cambridge, N. Y.
J. C. Robinson, Waterloo, Neb.
A. L. Rogers, Alpena, Mich.
Miss Inez Rogers, Alpena, Mich.
Miss Hazel Ross, Worcester, Mass.
Walter D. Ross, of the Ross Bros. Co., Worcester, Mass.
Wm. G. Scarlett, Baltimore, Md.
A. W. Schaefer, of the Albert Dickinson Seed Co., Minneapolis, Minn.
H. M. Schisler, of the Schisler-Corneli Seed Co., St. Louis, Mo.
H. A. Scuethorp, and wife, Port Hope, Ont.
E. J. Sheap, of S. M. Isbell & Co., Jackson, Mich.
Sam M. Sibley, of the Leonard Seed Co., Chicago.
H. S. Siebel, of A. T. Ferrell & Co., Saginaw, Mich.
Herman Simmers, Toronto, Ont.
Albert H. Smith, of the Leonard seed Co., and wife, Chicago.
C. Willard Smith, Chicago.
Curtiss Nye Smith, Boston, Mass.
F. A. Stecher, Rochester, N. Y.
Walter P. Stokes, Philadelphia, Pa.
Jefferson Thomas, of the J. Horace McFarland Co., Harrisburg, Pa.
T. J. Tobin, Missouri Seed Co., Kansas City, Mo.
Fred W. Vick, Rochester, N. Y.
Chas. Vick, Rochester, N. Y.
J. C. Vaughan, Chicago.

Miss Woodruff, Orange, Conn.
President Watson S. Woodruff and wife, Orange Conn.
C. A. Zavitz, Guelph, Ont.

PORTLAND, ORE.—Otho S. Hendee, Samuel B. Hendee and Edwin L. Hendee have incorporated the firm of Hendee Bros., to engage in gardening business. The capital is $5,000.

THE RETAIL TRADE

STORE alterations, cleaning and painting will now be in order.

Designs at Italian Funerals in New York.

Of the people of many nationalities who have found homes in the great city of New York none are more mindful of or show more affectionate respect for their dead than the Italians. It may also be stated that most of these people have the artistic temperament highly developed and their orders call for designs that are at once suggestive and, from their viewpoint, appropriate. While all may not agree with their ideas in design work, that is a matter which, in the past, has been the cause of widely differing opinions among the best designers of all nationalities. We must admire the respect and reverence shown their dead by the Italian people as it is one of the fine qualities that promotes kinship among all civilized peoples. The designs here shown were executed by Frank Valentine, 158 East One Hundred and Tenth street, New York.

Wreath of Blue Iris and Stock.

SEE SUPPLEMENT WITH THIS ISSUE.

The Spanish iris is becoming more and more popular as a cut flower and works up remarkably well into wreaths and other designs. The colors are bright and varied, the flowers last well and no flower, excepting possibly the orchid, is so distinctive and telling in large quantities. A wreath or any other large design of carnations or

STANDING WREATH BY FRANK VALENTINE, NEW YORK.

roses, sweet peas or violets, unless very carefully made, has a rather heavy appearance, the flowers settling into a block, but the peculiar outlines of the iris prevent any possibility of stiffness if the individual flowers are kept well apart.

Blue irises and white stocks are a very fine combination, so are the self-yellow irises and sweet peas with their indescribable tints hovering between mauve, purple and blue. White irises go well with almost any other flower or make an elegant wreath with only the accompanying green of ferns or asparagus and a bunch of color to break any suspicion of flatness that may exist in the dead white. Wreaths of this description make a welcome change from the lilies, roses and carnations so frequently seen and as the season of irises, through the various species, is a moderately long one quite a number of different ideas can be worked out with them. While the Spanish and English varities are possibly the most graceful, yet there are many very beautiful things among the German irises that come later. They are usually cheap and can be used plentifully while there is no lack of variety in color. Their keeping qualities are not of the best, though if cut in a partially opened state and allowed to develop in water just before being used there will not probably be much to complain of on this score.

Peonies at Springfield, O.

The peony season at the Good & Reese Co., Springfield, Ohio, was made the occasion of an invitation to the trade and public to visit the farm. The past two weeks have been the peony weeks, and those interested in the production of the higher class and improved kinds would have profited much by a visit. The wonderful collection has been reduced by constant and ruthless suppression of all varieties that are not distinct or in some way superior, consequently the best and greatest variety of choice, superb flowers only are now included. Each one rivals the other, as if they were belles at some great ball, each holding an individual court and attracting all men's attention. A little way off the flowers seemed blended into a carpet of dazzling beauty. There the deep crimson and the glistening red, here the purest white and yonder white with golden hearts.

To attempt to describe all the varieties would be an endless task, but it is impossible to pass by without a word of praise to some of the grandest and most magnificent ones. Festiva Maxima in all her stately beauty of the purest white with just a little crimson in the center was magnificent. L'Eclatante, standing on a slight knoll with thousands of massive velvety red flowers held erect, drew from all an exclamation of admiration. The mammoth pure pearly white flowers of Lady Derby completely hid large and well foliaged three-year-old plants and received a share of admiration from all visitors. The harmony of pure white and delicate pink blended in Golden Harvest appealed to everyone in its fascinating and superior beauty. Madame Florel, a veritable princess of clear, intense and very clear pink added a dazzling touch of color never to be forgotten. C. G.

SUGGESTIONS FOR CUT FLOWER GROWERS.

Tuberoses.

No matter where tuberoses are grown they are very subject to red spider attacks and, if grown under glass, constant spraying is necessary to keep this insect in check. The finest flowers and the best stems are produced when the atmosphere is cool but moist, the moisture being kept up until the flowers begin to open. Continue to plant bulbs in suitable numbers according to the number of spikes needed and keep the side shoots constantly pulled off the growing plants. This is practically all the care they need now except to water freely and support the forming flower spikes.

Peony Mme. Forel.

Grown by Good & Reese Co., Springfield, O.

Flowering Shrubs.

In cutting the branches from spireas, viburnums and others, there is considerable risk of injuring next season's crop of flowers by damaging the new growths. These at the time the shrubs are in flower are very green and brittle and a touch will break them off, spoiling the chances of next year's flowering. Use care then and the results will be far better than if the work is gone about in a haphazard way. After the flowers are over a little pruning is of great advantage. Still avoid the young shoots but remove the wood that has flowered thus letting in light and air to the young growth. This will be an aid to ripen it and well-ripened or consolidated wood not only flowers more freely but is less likely to be winter killed than that which is green and leafy in the late fall. Lilacs again often get heavy on top and the rooflike branches keep the light out of the center of the bushes, with the result that new shoots springing from the base weaken and die instead of carrying out their proper functions of renewing the youth and health of the bushes. A little of this kind of work will greatly assist the shrubs and improve the quality of the flowers another season. Applications of liquid manure or even water will also be of great assistance to the growth.

Pyrethrums.

Where the first flowers have been cut, trim up the plants a little and remove the flower stems low down. Give a liberal top dressing of good rich light soil and, should there be any suspicion of dryness at the root, thoroughly soak the border with water or weak liquid manure. This will give the plants a new start; new roots will push out into the surface soil and new flower stems form and, instead of gradually getting weaker all summer, a continual supply of choice, well-colored flowers will be produced. This is a little trouble, but it is amply repaid by the increased number and quality of the flowers.

Poinsettias for Cutting.

Where there are old plants left over after propagating and there is a demand for cut poinsettias, plant these upon a bench where they have at least six feet of head room and, with a minimum of expense and trouble, they will produce a lot of fine useful flowers. Any old plants will do and it is only necessary to cut them hard back so as to get the length in the stem. Throw the house wide open by day and damp the floors and under the benches regularly. Leave plenty of air on at night and the plants will grow hard and sturdy, producing fine, well-developed bracts later. The soil need not be new or especially good, anything that the roots can run in freely, but it should be firmly placed. Water freely when the plants get well under way and commence to feed as soon as the bracts show.

Late Asters.

Although the number of early flowering chrysanthemums has greatly increased of late years yet there is always a good demand for late asters and it is worth while being at a little trouble to get good flowers after the bulk of the aster crop is over. The worst trouble with late asters is keeping them cool and free of insects and where a few plant protectors can be spared from now on and lightly shaded during the hot months, grand flowers will be produced that are sure to find a market. One of the most troublesome summer foes of the aster is a green grub that comes from the white butterfly. These and other insects may be kept in check by bi-weekly sprayings with kerosene emulsion. Some growers have a difficulty in making a proper emulsion with soap and oil and find that the oil readily separates from the soapy liquid, and from experiments we have tried along the lines of using flour instead of soap we are convinced that the idea is a good one. It was first used, we believe, at one of the Canadian experiment stations and the formula is

one gallon of kerosene, 2½ pounds of flour to nine gallons of water. Just mix the kerosene and flour, then add the water by degrees, stirring vigorously and thoroughly mix them. If the plants can be kept growing by these means and the flower buds are thinned later fine stock will be produced. Another lot of seed may be sown now for this purpose and still another batch in July for planting under glass.

Shading Outdoor Flowers.

There is no comparison in the quality of flowers outdoors that are lightly shaded and others left to the burning influence of the July and August sun. In the first place the flowers develop too rapidly; they do not come with good substance in the petals nor do they last, while the sun takes out the color and makes them less attractive. There are, it is true, some flowers that seem to revel in the heat, such as many of the native yellow composites, and the gaillardias stand the sun well, but even with these a little shade is a great advantage. Gladioli never come so good in the open as when a light shade is given, the flowers being larger, finer in color and more of them opening at one time on the spike. A few yards of cheap shading material make a wonderful difference to the quality of the flowers and if carefully folded away when done with lasts for several seasons and is well worth while.

Air for Cattleyas.

The increasing number of these fine orchids grown and sold has led many into their culture that have had no previous experience with them, and as these often have the idea that orchids of any kind are tender subjects needing great care, they are apt to close their houses and watch the plants as carefully as a mother watches her babe. It is a good sign when a young man takes this view, but he is apt to be overcautious. Cattleyas, perhaps more than any other tropical orchids, require air in plenty and all the light possible at all times consistent with keeping the foliage from getting burned from over exposure to the sun. Roller shades or lath blinds are preferable to permanent shading of any kind, but where these are not provided a thin coat of whitewash should be applied. The worst days for the cattleya grower in spring are those when a cold wind is blowing under a very bright sun, as it is impossible to open the ventilators fully without chilling the plants. But on ordinary days from now on the vents can be more or less widely opened, and even if the leaves are blown about by the wind it will do them no harm, but, on the other hand, will invigorate and strengthen them. Constant damping of the floors, the benches and all other available space in the house is necessary to maintain the requisite moisture in the atmosphere, and then, if the temperature ranges anywhere between 75° and 90° by day, the cattleyas will enjoy life. Nothing, in short, can be simpler than keeping the atmosphere right when the weather is warm and bright and there is plenty of water at command. One point in this connection should not be lost sight of. Cattleyas as a general rule do not like overhead watering to any great extent. An occasional thorough washing with the hose in warm weather is excellent. It removes accumulated dust and, on a hot summer day, refreshes the plants and cools the atmosphere around them. But regular spraying as is practiced in some places is not advisable.

Peony Lady Derby.

Grown by Good & Reese Co., Springfield, O.

Notes on Aquatics.

Those who have grown aquatics have had some disappointment to meet; some plants have died, others have grown too strong, others did not flower; some are planted too early, others again are planted too late, though this is seldom the case; aquatics are varied, embracing as they do species and varieties from all quarters of the globe and where all such are attempted to be grown in one small pool in a varied climate as we experience there is no wonder at some vagaries. The only solution is a close study of the numerous varieties to know the conditions that should prevail; then, other things being equal, success is assured.

Nelumbiums have always been more or less disappointing, especially to the amateur and the inexperienced in aquaticulture; they are very impatient of removal and no date can be placed as the proper time to dig or transplant the tubers. In the eastern states the middle or latter part of April is early enough, but in the western states probably a month later, but whatever the time is, certain conditions must prevail as it is not safe to dig and transplant until growth has started and everything is conducive to a rapid growth. When such conditions do not exist the tubers will invariably succumb hence it may be inferred that the latter part of May is a good time to plant nelumbiums. Where tubers cannot be secured young thrifty plants in pans or pots may be relied upon to give satisfactory results.

Tender nymphæas may be planted almost any time where artificial heat is applied to the ponds but where only solar heat is relied upon then one must wait until old Sol gets in his fine work and warms up all ponds, pools, etc., so that it is comfortable to take a bath in. Usually about Memorial day or the first week of June is the right time. Tender nymphæas are always grown in a warm greenhouse and such plants subjected to a low temperature receive a check, the leaves turn yellow and die or at best are poor examples of what they ought to be. Tubers that are showing growth are more satisfactory to plant, as they do not experience such a check, but where plants can be cared for until planting time grow them on and keep them steadily moving and when right conditions prevail plant them in their summer quarters. No plants are more satisfactory to grow than tender nymphæas but it must not be forgotten that they are tropical plants requiring ample space for full development, rich soil, full exposure to the sun and a warm sheltered spot in the garden. They will give large returns for care bestowed upon them and when the hardy nymphæas have almost ceased to bloom they will furnish an abundance of flowers unsurpassed by anything else, and when drouth affects all other decorative plants these may be relied on to furnish an attractive spot, delightful and pleasing.

For decorative purposes the tender nymphæas are unique and far surpass the hardy varieties; the flowers are large, of all shades of color and the night blooming varieties of white, pink, red and crimson are of special value to the florist and should be grown largely for cut flowers. The well-known Victoria Regia and V. Trickeri grow under similar conditions to the tender nymphæas but V. Regia, coming from the tropics, requires a higher temperature than V. Trickeri hence the latter may be depended upon to plant without artificial heat.

WM. TRICKER.

PEONY FIELD AT THE GOOD & REESE CO., SPRINGFIELD, O.

HARDY HERBACEOUS PERENNIALS.

The Herbaceous Border in June.

There is a freshness and beauty about the foliage and flowers in the herbaceous borders in June that is wonderfully attractive and that, unfortunately, is not so marked later on in the hot weather. The great masses of foliage are charming, even if there were no flowers, the great variety in tints of green, and in shape and character making a fine picture. Speaking of foliage there is nothing finer now than the white variegated funkias and the yellow marked varieties are a close second. Perfectly hardy, thriving anywhere and independent of season, these fine subjects should be grown by all, and, in addition to their fine foliage, their flowers are extremely attractive. Acorus gramineus variegatus is another showy variegated plant at its best now, the long sword shaped leaves being deep green heavily variegated with creamy white.

Some growers appear to have an aversion for native plants. Why it would be difficult to say. Growers in Europe are always anxious to secure them, and, strange to say, American growers will buy the native species under high sounding varietal names, yet will not grow the beautiful flowers they have at their doors, so to speak. For instance the native Geranium maculatum has been most beautiful now for several days, and after the flowers are over there will be a magnificent bank of green foliage right through the season. Yet how many growers have it or would care to add it to their collections? Hundreds of dollars have been sent out of this country for various composites such as the rudbeckias when the plants were growing wild by the thousand in our woods and prairies. Look at the lovely little forms of Phlox subulata and P. divaricata. European catalogues contain glowing descriptions of them and American growers have bought them when they may just as well have raised them from seed at home; they would have had healthier, better plants and more flowers than can be produced from the half starved pot grown stock sent over here from Europe.

Happily growers are beginning to see this and American nurserymen are giving more attention to natural methods of propagation. Referring again to the June flowers after this digression the varieties of Pyrethrum roseum demand recognition. Both the double and single forms are splendid for cutting, the colors extremely rich and varied, the stems graceful and long enough to show up well and altogether they are among the finest herbaceous plants in existence. We usually cut them back some after flowering and mulch the soil and they start up again and flower more or less freely all the summer. The irises are very prominent now, especially I. Germanica and I. Sibirica. The varieties of the former are endless, all gorgeously beautiful, while the deep blue of the Siberian iris is very noticeable. I. cuprea is pretty and distinct and worthy of more extended culture.

No herbaceous garden is complete without a few at least of the columbines or aquilegias. There are numberless varieties, both of A. cœrulea and A. chrysantha that can be raised from seed, and there is no better way of working up a good stock. We could not begin to describe the colors, but all are beautiful and every one worthy a place in the best collection. The thalictrums are hardly at their best yet, but we call attention to them on account of their splendid foliage. They delight in a moist sandy soil and just now the foliage is magnificent and will be followed later by the elegant feathery flowers that alone would make the plants worth growing. The pretty little T. adiantifolia, as its name implies, has foliage like a maidenhair fern and is a pretty, dwarf growing sort.

The spiderworts or tradescantias form another instance of native plants being neglected. There are several colors in the free growing, hardy kinds and they make a very fine feature on the herbaceous border, yet only too rarely are they seen in anything approaching good condition. These too delight in sandy soil and the richer and moister it is in reason the finer the growth will be. The day lilies (hemerocallis) are among the showiest of June flowers, H. Thunbergii being one of the brightest in color, though not nearly so large as some others. H. flava, H. fulva, H. Kwanso and H. aurantiaca major are four splendid herbaceous plants, though so common, and none of them can be left out. As an edging plant for June and later the pretty little Veronica prostrata (a plant of many names) should not be omitted. Its bright blue color cannot be excelled by any other dwarf plant flowering now, and it is one of the most desirable species in this extensive genus. These few notes, prompted by a look around the borders, are by no means complete, but they may help to show what a wealth of beautiful things we have at our command if only we will use them. R.

Notes on Narcissi.

Amongst the numerous bulbous plants that can be grown successfully in the garden in spring, or forced in the greenhouses in winter, the narcissi are certainly amongst the most important. When we consider the remarkable beauty of the many forms of narcissi in cultivation, it seems surprising that it did not stand higher in public appreciation prior to the daffodil conference held under the auspices of the Royal Horticultural Society (Eng.) in 1884. It is true that at that time, and since, a large number of valuable and choice varieties were, and have been, introduced to cultivation; but that famous conference marked the era of daffodil popularity and there has been no abatement since.

Amongst the long yellow trumpets with yellow perianths Obvallaris, Golden Spur, and Henry Irving are the first to flower with us and were in full bloom on April 26. Henry Irving has a remarkably handsome trumpet, and spreading, wheel-shaped perianth. Emperor is one of the finest in the yellow long trumpet section. The perianth is light yellow, and the trumpet deep yellow and very large. This is one of the most useful forms of narcissus and was in full flower on May 7.

Amongst the bicolor trumpets with white to very pale primrose perianth, Princeps is the first to bloom and was in full flower on May 1. The perianth is sulphur white, and it seems to be a remarkably good keeper from year to year. Victoria is a handsome form with large bold flowers, and perianth showy, spreading, creamy white. Horsfieldii was in full flower on May 7. We regard this as one of the best and most useful of the bicolors, that is, amongst those not high priced. The perianth is almost white and trumpet deep yellow, and it shows much refinement and beauty. Empress shows much similarity to Horsfieldii and flowers two to three days later when growing side by side. The perianth segments appear to us to be lightly marked with primrose yellow over the ground of cream white. Dean Herbert again shows a strong resemblance to Empress, differing somewhat in the coloring of the trumpet, and flowers about the same time. Apricot is an exceedingly beautiful bicolor and was in full flower May 15. The handsome straight trumpet, light yellow and beautifully crimped at the top, with handsome white perianth and a marked perceptible fragrance render it a charming form. J. B. M. Camm is a form of much distinctive beauty. The perianth is pure white and the flowers are supported by good bold foliage.

In the white trumpet section, Albicans is the first to bloom and was in full flower on May 1. The trumpet is pale primrose yellow, approaching creamy white, long and narrow and recurved at brim. Sir Stafford Northcote was in full bloom on May 7. The perianth is distinctly white and the trumpet narrow, and pale creamy white or approaching pale sulphur. W. P. Milner has perianth and trumpet pale sulphur white, with brim of trumpet recurved, and is a flower of refined beauty and flowers at the same time as Sir Stafford Northcote.

In the medium trumpet section there are many beautiful and lovely forms, and of the incomparabilis, that is, those distinguished by yellow cup or trumpet, and white or pale yellow perianth, Sir Watkin is about the first to bloom and was in full flower on May 7. The brim of the trumpet is spreading and lightly tinged with orange. It is one of the handsomest incomparabilis forms we have. Beauty is a highly chaste form. The perianth is a delicate light sulphur yellow, with a spreading yellow cup margined with deep orange. It was in full flower on May 11. Autocrat is a pleasing form with a light yellow perianth and a handsome broad yellow cup, and was in full flower on May 13. Mabel Cowan is distinguished by a white perianth, and a beautiful, yellow, broad cup, margined with deep orange, and was in full bloom on May 15. Commander has a most distinctive perianth of a pale sulphur yellow color and a prominent large yellow cup stained deep orange, and was in full bloom on May 17.

Amongst the medium trumpets with the white or whitish cups, which are known as Leedsii, Mrs. Langtry is perhaps one of the best we have. The

perianth is distinctly white, and the cup, which opens with a light tinge of yellow, turns to a pure white. It was in full bloom on May 8. Gem is a most attractive form. The perianth is pure white and the cup is a pale sulphur white and beautifully crimped at the margin. It was in full bloom on May 14.

Amongst the Barri section of the medium trumpets, perhaps Barri Conspicuus is the best known, and for general cultivation it is one of the best. The prominent, large, spreading, light yellow perianth, and the cup conspicuously stained with deep orange carmine render it very attractive and it was in full flower on May 7. Flora Wilson has a white perianth, and the cup is deeply marked with orange carmine and is a most attractive form. It was in full flower on May 13. Maurice Vilmorin has a broad distinctive primrose white perianth and the cup is stained with deep orange red. It flowers at the same time as Flora Wilson.

The ever popular poet's narcissus with its pleasing fragrance and the beautifully marked short cup, stained with cinnabar-red is liked by everybody. Ornatus flowers earlier than the type, has much larger flowers and was in full bloom on May 12. King Edward the Seventh is a beautiful poeticus form with a handsome large flower, and is as much an improvement over Ornatus as Ornatus is over the type. It flowers about the same time as Ornatus.

JOHN DUNBAR.

Pasadena Gardeners.

The accompanying picture shows a number of members of the Pasadena Gardeners' Association, the photograph being taken while they were on a visit to J. W. Wolfskill's greenhouses at Los Angeles to see the carnations. These are grown here in great variety under glass as well as, or perhaps better, than anywhere else in southern California.

The First Break in Chrysanthemums.

Many of the plants which were benched last month are now making premature buds, or what is termed the first break. With these buds appear several lateral growths, one or more of which must be retained. The question is often asked which should be saved? As a rule the growth nearest the bud is weaker than the second and third, and as these early buds will not make blooms they should be removed, taking with it the first growth.

Those preferring one bloom to the plant should save the strongest and those desiring two blooms the two strongest. The growths will continue until time for the early or crown bud to appear, which, with most of the popular sorts, occurs about six weeks later. There are exceptions to these rules; some kinds will continue forming buds every two weeks, while others continue their growth until the end of August before this condition again occurs. Some of the early sorts will show buds in July, and in a few cases may be retained. Those interested in this subject will find in our last notes, page 956 of THE FLORIST, several early varieties are mentioned giving the dates when it is safe to save buds.

ELMER D. SMITH.

MALDEN, MASS.—Kaulback & Son recently had some fine wedding decorations.

To Be Done Now.

IN THE GREENHOUSES.

Look out for the first attacks of thrips in cyclamens and take measures to destroy the insects at once.

Select plants of regal and show pelargoniums that have not been highly fed for propagating from.

Red spider is one of the worst enemies to tuberoses. Look out for it and spray frequently to destroy it.

Keep the atmosphere moist in the plant houses by regularly and frequently dampening all stages, floors and benches.

Always take the second or third shoots when stopping chrysanthemums; never the first.

It is impossible to keep the houses or frames in which liliums of the lancifolium type are grown too cool now.

Repot young geraniums for winter flowering before they get hard in the pots.

PASADENA GARDENERS AT WOLFSKILL'S, LOS ANGELES, CALIF.

Watch the shading carefully. The sun is so powerful now, especially after a few dull days, that a great deal of mischief can be done to tender foliage by a few minutes' neglect.

Continue the propagation of poinsettias and pot the early rooted cuttings.

Do not allow young plants of Begonia semperflorens or B. Gloire de Lorraine to flower, as it is weakening to them without any corresponding benefit.

OUTDOORS.

Prune the shrubby spireas after flowering, but not with the shears. Remove the old wood and allow the young to develop naturally.

Allow no summer weeds to go to seed. Where there are no crops needing cultivation, plow or hoe the weeds down.

Attend to the pinching of the carnations in the field and make good any rows where plants have missed.

Top the grapevine shoots to allow the basal eyes, to which they will be cut back later, to fill out.

Never allow sweet peas to go to seed unless seed saving is intended, as this will check their flowering.

Clean up the grass edges around the shrubbery beds and borders, picking out any grass roots that may have run out in the soil.

Place some hard substance, such as brick or tile, under all pot plants plunged outside to prevent rooting through.

Where there is much manure that cannot be used run a team over it to pack it down solid and prevent heating and loss of fertility.

A good mulch of semi-decayed manure is a great help to sweet peas in hot, dry weather.

Remove a little of the foliage of oriental poppies and other strong growing herbaceous plants that may be overrunning weaker species.

Herbaceous Calceolarias.

The requirements of these plants are simple, and anyone possessing a greenhouse from which frost can be excluded, can cultivate them with success. We sow the seeds about the middle or end of June, in pans, in a compost of equal parts loam and leaf-mould, with coarse silver sand, the mixture being sifted through a fine sieve, says the Gardeners' Chronicle. The soil in the pans should be well watered before sowing the seed. The seeds should be sown thinly, covering them very lightly with soil, and placing the seed-pans in a cold frame. A good plan is to place them on inverted flower-pots standing in saucers of water. The water in the saucers will keep the surroundings moist, which is congenial to the germination of the seeds. In addition it keeps slugs from the plants. If the frame is placed on the north side of a wall, so that direct sunshine cannot reach the seedlings, no shading will be necessary, and the plants will, in consequence, be much stronger. In the course of a few weeks the seedlings will be large enough to be transplanted into pans, which should be filled with the same kind of compost as before. As soon as they are large enough they should be potted singly into small pots and returned to a cold frame having a floor of ashes. Soot should be sprinkled about to keep away slugs.

Abundant ventilation should be afforded at all times; indeed, the lights should only be used to protect the plants from rain. As autumn advances the plants make rapid growth and require larger pots. They should be grown in the cold frame until frosts appear, when they should be accommodated in a frost-proof structure. They must be kept cool and placed as close to the glass as possible. Some time in January the final shift into pots having a diameter of 8½ or 9½ inches should be given. The compost we use at this stage consists of two parts loam and one part leaf-mould, with dried cow manure and sand added. Grown in this manner, we have never failed to have a fine show of calceolarias each spring for several years. Some of our plants measure three feet through. Aphis sometimes attacks the plants, also a small yellow thrips. These pests can be kept in check by an occasional fumigating with a nicotine compound.

PRICES of greenhouse glass in Chicago hold rather firm; 90 and 35 per cent are the discounts on double strength glass, and 90 and 30 on single strength.

GREENHOUSE piping is now lower than it has been for years, with a discount at Chicago of 77 per cent; this for immediate shipment, as prices are expected to be firmer and higher.

GLASS can be bought now at about $2 per box in quantity lots.

ACCORDING to G. W. Reburn of Vaughan's Seed Store a large number of St. Louis florists are going to the S. A. F. convention at Cincinnati, while further west almost every florist says he will be there.

Greenhouse Glass Drops in Tariff Schedule

Amid the clash of interests in the United States senate pertaining to tariff rates, the one large item of expenditure in all greenhouse construction, window glass, is affected. The Aldrich committee refers the clause back with a much lower rate than existed under the present tariff. Senator Elihu Root of New York threw his powerful influence in favor of this action. BENJAMIN HAMMOND.

Secretary Tariff Committee, S. A. F.

American Rose Society.

PRIZE OF $100 FOR OUTDOOR ROSES.

Several persons have advised that the last schedule of premiums be adhered to by the American Rose Society for the next rose exhibition to be held in New York in March, 1910. President Poehlmann has requested the committee which drew the last schedule to act, and, if in its judgment it seems best, that the same be adopted and published without delay. The committee is composed of the following: Robt. Simpson, Alex. Montgomery, John N. May, Frank R. Pierson and Benjamin Hammond. Life certificates have been issued to Mrs. Gertrude M. Hubbard, who, by unanimous vote at the Buffalo meeting, was elected the first honorary life member, and to Peter Crowe of Utica. Treasurer Harry O. May reports that with all bills paid he has a net cash balance on hand.

There is one thing which surely should be done if the American Rose Society is to grow among amateurs, and that is to issue a special quarterly, something whereby the interest in the association would be aroused in those who do not see our excellent trade papers. Two propositions have been submitted—one from the Gardeners' Chronicle, the other from the Garden Magazine. A general meeting of the society will be called during the session of the S. A. F. in Cincinnati. His honor, the mayor of Detroit, Philip Breitmeyer, offers a cash prize of $100 for the best collection of hardy outdoor roses, in pots or tubs, to be exhibited at the next annual exhibition. The gentlemen who promised contributions last November toward the prize fund of the society have loyally redeemed their promises then made.

BENJAMIN HAMMOND, Sec'y.
Fishkill-on-Hudson, N. Y.

Profit From Greenhouses.

ED. AMERICAN FLORIST:—

Please let me know what percentage of profit a grower should get when cut flowers and plants are grown for market under glass. We have three houses 21x35 feet and three 21x115. Two are to be planted to roses and one to carnations. W. B.

We have pointed out again and again that it is impossible to state the percentage of profit that a grower can make in a case of this kind. Everything depends upon the management of the place. The skill of the grower, the class of market that is found for the product, expense of obtaining soil, water and other requisites have all to be taken into consideration and even with the best of management and the finest cultural skill things will sometimes go wrong and ruin a crop, the market will fail or some other circumstance occur to upset the best calculations. The man who looks for a fixed percentage of profit out of the greenhouse business is manifestly so inexperienced that the probability is he will make no profit at all. But this is not the fault of the greenhouse business.

Packing Outdoor Flowers.

ED. AMERICAN FLORIST:—

Would you kindly tell me the proper way to cut, treat and pack flowers for shipment? How many days could roses grown outside, mostly hybrid teas, travel with safety and how many should be packed in one box? If you will go into this subject, telling how long flowers should be cooled, etc., the best way to pack such things as lilacs, sweet peas, peonies, tulips and asters, I feel sure not only I but many of your readers will be sincerely grateful.

British Columbia. R.

In answer to "R." our experience with outdoor grown roses is very limited but we do know that greenhouse roses if cut tight and placed in water and cooled off for 12 hours can be packed and shipped on a three days' journey and arrive in good condition. Lilacs can be left in water the same length of time and will ship 12 hours providing that they are well iced. Peonies, tulips and asters ship equally as well as roses; sweet peas do not carry well and only short distance shipments are satisfactory.

In regard to the size of the box for roses, a box 30 or 36 inches long (according to the length of the stem of the roses), 12 inches wide and six inches deep will hold 100. They should be made fast in the center with a cleat and then use cleats from six to eight inches apart in the center of the box to hold the ice and sufficient room should be left at the top to let the cold air circulate among the roses.

J. B. DEMAUD CO.

Plant Notes.

One who should know says that the true Salvia Fireball (Pfitzer's) is far better than Zurich.

German irises are legion, but there are few more attractive varieties than Prince Leopold. The tint of purple rose in the standards is almost indescribable while the color of the falls is exquisite.

European specialists are working on new varieties of Hydrangea hortensis. One especially, a white form named Mme. E. Mouillere, is highly spoken of and has received awards from various horticultural bodies.

Two good white tufted pansies are Virgin White, a pure white rayless form having flowers on tall stalks, rather loose growing, and Marchioness, a fall flowering, very hardy variety and with flowers of a creamy white.

There is a dwarf form of Iris Sibirica—or else the conditions have made

it dwarf—growing in Jackson park, Chicago, that as a border plant is far superior to the tall form. It only grows about 16-18 inches high and the deep blue of the flowers is remarkably beautiful.

Stuart Low & Co.

CHANGES IN OLD ESTABLISHED FIRM.

The old and world-renowned firm of Hugh Low & Co., Bush Hill Park, Enfield, England, has been voluntarily dissolved and the nurseries, the greater part of the stock and practically the entire staff have been taken over by Stuart Henry Low, who will run the business under the style of Stuart Low & Co., at the old address. The history of this firm, under whom so many of the finest British and other gardeners and horticulturists have graduated, goes back into the dim past.

In the early part of the last century it was already a power in the horticultural world under the late Hugh Low, whose enterprise brought to notice many varieties of Mexican and Californian coniferæ, New Holland plants, Cape heaths, camellias, etc. When the reins were taken by the late Stuart Henry Low, orchids were a specialty and no corner of the world was safe from his collectors including his brother, Sir Hugh Low, Blunt, Smith, Boxall, Tucker, Bruckmuller, Lehmann, White and Curnow all of whom sent home large importations of what are now the best known occupants of our orchid houses. During his regime the glass at Clapton was increased fourfold. It was he who started the present Bush Hill Park nurseries with his son, Stuart Henry Low, in charge, assisted by his younger brother, Edward V. Low who is very well known in the United States and who together have built up a gigantic business. The firm has of late gone into American carnations extensively and is keeping well abreast of all the recent novelties. Our best wishes are with Mr. Low, who, we are convinced, will well maintain the integrity and fame of his forbears in the business.

Important Foriegn Exhibition.

July 2.—National rose show, National Rose Society, Royal Botanic Gardens, Regents Park, London, N. W., Eng. E. Mawley, secretary, Rosebank, Berkhamsted, Herts, Eng.

July 6-7.—Holland House show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 23.—National sweet pea show, National Sweet Pea Society, R. H. S. Hall, Vincent square, Westminster, Eng. C. H. Curtis, secretary, 2 Adelaide road, Brentford, London, W., Eng.

September 8-9.—Royal Caledonian Horticultural Society, Centenary show, Waverly Market, Edinburgh, Scot. John McKenzie, secretary, 23 Rutland square, Edinburgh, Scotland.

Meetings Next Week.

Albany, N. Y., July 1, 8 p. m.—Albany Florists' Club, W. C. King's, 24-26 Steuben street.

Baltimore, Md., June 28, 8 p. m.—Gardeners' Club of Baltimore, Florists' Exchange hall, St. Paul and Franklin streets.

Chicago, July 1, 8 p. m.—Chicago Florists' Club, Union Restaurant, 111 Randolph street.

Cleveland, O., June 28, 7:30 p. m.—Cleveland Florists' Club, Progress hall, 2610 Detroit street.

Lake Forest, Ill., June 30, 8 p. m.—The Horticultural Society of Lake Forest, Council Chamber, City hall.

Lake Geneva, Wis., July 3, 8 p. m.—Lake Geneva Gardeners' and Foremen's Association, News building.

Milwaukee, Wis., July 1, 8 p. m.—Milwaukee Florists' Club, Quiet House, corner Broadway and Mason street.

San Francisco, Calif., July 3.—Pacific Coast Horticultural Society.

Utica, N. Y., July 1, 8 p. m.—Utica Florists' Club, Hotel Martin.

Situation Wanted—As salesman, designer and decorator; salary considered if position is good
Key 841 care American Florist

Situation Wanted—Gardener; aged 33; married; 16 years practical experience in all branches of horticulture both in England and Scotland
FOSTER, 228 South Alden St. Philadelphia, Pa.

Situation Wanted—Near Phila., as manager or working foreman on commercial or private place; 10 years experience in growing carnations, 'mums, vegetables and bedding plants; age 28; married; best of references; state particulars.
Key 828, care American Florist.

Situation Wanted—Gardener and florist, single 28 years of age; 14 years' experience in private and commercial places; grower and propagator of pot and bedding plants, cut flowers, carnations, roses, gardenias, forcing vegetables landscaping; wish position July 1; private preferred; can furnish German and American references.
Key 843, care American Florist.

Help Wanted—Competent carnation grower to take section under foreman.
G. VAN BOCHOVE & BRO., Kalamazoo, Mich.

Help Wanted—First-class designer, decorator and storeman for retail store. Address, giving particulars, salary, etc.,
Key 844, care American Florist.

Help Wanted—A man for general greenhouse work; must have experience in pot plants, 'mums and bedding stock. Address
Key 840, care American Florist

Help Wanted—Experienced seedsman especially for house work on garden seed and packet seed department; also to travel on the road three to four months during the season. Address
Key 857, care American Florist

Help Wanted—Reliable traveling salesman to work market garden trade, also to work in store; must have experience on the road also a thorough knowledge of the seed business; good salary to right party; best of references required.
J. F. NOLL & CO.,
115 Mulberry St., Newark, N. J.

Wanted—A good capable greenhouse man with a little money and a desire to build up a business will find Milford an ideal point to establish a business and find ready help; write
EUGENE L'HOTE, Milford, Ill.

For Sale—Greenhouse property; 10,000 feet of glass; ideal location; write for particulars to
Box 114 Lansing, Mich.

For Sale—Greenhouse in Salida, Colorado, 6000 feet of glass, good trade, no competition; price low; address owner.
J. H. FREEMAN, Salida, Colo.

For Sale—A valuable greenhouse business in a good town; no competition; can sell more than you can grow at good prices; ill health.
DWIGHT GREENHOUSES Dwight Ill.

For Sale—15,000 feet of glass 20 acres of land; well located, well stocked; good reasons for selling; Eastern Ohio; wholesale; carnations a specialty; a bargain if sold at once. Address
Key 842 care American Florist.

For Sale—$3000 on easy terms will buy a desirable florist business in Tennessee; about two acres of ground, four greenhouses, barn, outbuildings and a nice 3 room cottage. Address
Key 838 care American Florist.

For Sale—Greenhouse plant of about 19,000 feet of glass; steam heat; cheap coal; all stock goes with the plant; six-room cottage; about one acre of ground; on car line; horse, wagons, tools, designs and all go with plant; a rare chance for a good florist with $5,000 cash; balance on easy terms; reason for selling, poor health, not able to look after the business. Address
A. D. JONES Colorado Springs, Colo.

For Sale—Two firebox return flue pattern hot water boilers used four years; will heat 6,000 ft. 4-in. pipe. Price $215.00 each. One Kroeschell pattern hot water boiler, used four years; will heat 4500 ft. 4 in. pipe. Price $190.00; complete with grate bars, smoke box and ashpit doors. All in good condition. 5000 ft. 4-in cast iron pipe at ten cents per foot. 2000 ft 5-in. cast iron pipe at twelve cents per foot. Three No. 2 Morehead steam traps in good working order at $45.00 each. One high pressure steam pump 3-in suction, 2½-in. discharge; in running condition; price $50.00. Sixty Evans ventilator arms, complete at twenty cents each. Address GEORGE REINBERG, 51 Wabash Ave., Chicago.

WANTED --- At Once

A good grower of roses, carnations, 'mums and general line of pot plants; must be able to produce results; permanent position and good pay.

Cincinnati.

THE GLUT OVER.

Trade the past week has been very satisfactory, the glut of carnations and peonies having spent its force, and the wholesaler realized something like living prices for the grower. A few days of delightfully cool weather had a tendency to improve the quality of roses and carnations. Shasta daisies and sweet peas are to be had in quantity, and the quality is first class, with a good demand. Lily of the valley and Lilium longiflorum are exceptionally fine for this season of the year. There seems to be an unlimited supply of feverfew which is not moving at all. Green goods of all kinds are to be had in quantity, with a good call.

NOTES.

Will Murphy's mail was extremely heavy Monday morning, the bulk of which called for exhibition space. Will showed the writer what space has been allowed already and from present indications the exhibition next August is going to be a grand affair.

Every one is talking vacation, and the first one to take advantage is Miss Cora Pherson, bookkeeper at Wm. Murphy's. She leaves this week for the bluegrass regions of Kentucky to spend a month of deserved rest with relatives.

C. E. Critchell has been located at Spotlesstown, one of the numerous camps on the Little Miami river. No wonder we missed him for quite a period. He reports a good time and looks the part.

This week we have the Turners from all sections of the country with us, and the city is in gala attire. At the present writing we have not noticed any florists among the 25,000 strangers in town.

Frank Benson, erstwhile of Newport, Ky., but at present located in Indianapolis, was a caller Sunday. Frank says business is first rate with him and that Indianapolis is one good flower town.

Albert McCullough, president of the J. M. McCullough Sons Co., left Monday night for Niagara Falls to attend the seedsmen's convention.

B. Nanz of Owensboro, Ky., stopped off between trains here, his destination being Cleveland. S.

Cleveland.

PEONY WEEK.

The past week has been peony week an immense quantity of this beautiful flower having been sold for commencements and wedding decorations. Red and dark and light pink were the most numerous. White, on account of being spotted by rain, is rather scarce, and besides white is nearly done in outside stock. Cold storage white is of good quality, but a little higher priced. Richmond roses were used very extensively the past week, and the quality was good. Roses of all kinds are getting smaller and poorer in grade. Many growers are now throwing out the old to make room for the new, and the result is that the crop is not quite so heavy. Carnations are still overplentiful and go at very low prices, several retailers having sales at which good carnations sold for 10 and 12 cents per dozen. Dagger ferns are a little more plentiful and of a better quality. Lily of the valley has only a limited call. All greens are selling well and the supply plentiful.

NOTES.

Wilhelmy Bros. have a new horse which they bought recently, which is inclined to be rather frisky. Saturday morning while standing in front of the Florists' Exchange he became frightened at something and ran away, going down Huron road past the crowded Sheriff street market house to Ontario street up to the square before he was stopped. No damage was done to either horse or wagon, which is remarkable considering the crowd.

The trouble at the Storrs-Harrison Co.'s nursery seems to be about over It is said that Italians will be put on in place of the striking Hungarians.

The Ehrbar Floral Co., 3033 Lorain avenue, had a carnation sale on Saturday. Carnations sold at 10 cents per dozen.

C. B. Wilhelmy, 3610 West Twenty-fifth street, reports good transient trade, on account of his location, being directly opposite Riverside cemetery.

Geo. W. Smith of the Cleveland Florists' Exchange was presented with a fine baby boy Tuesday. Both mother and baby are doing well.

Mrs. John Leuschner, wife of the Lakewood nurseryman, left for a visit to friends in the old country this week.

Merkle & Son, Mentor, have a large crop of Easter lilies on at present, and of good quality.

G. W. Mercer closes at noon on Sundays. A good business is reported. B.

Chicago Notes.

OTHER CHICAGO NOTES ON PAGE 1130.

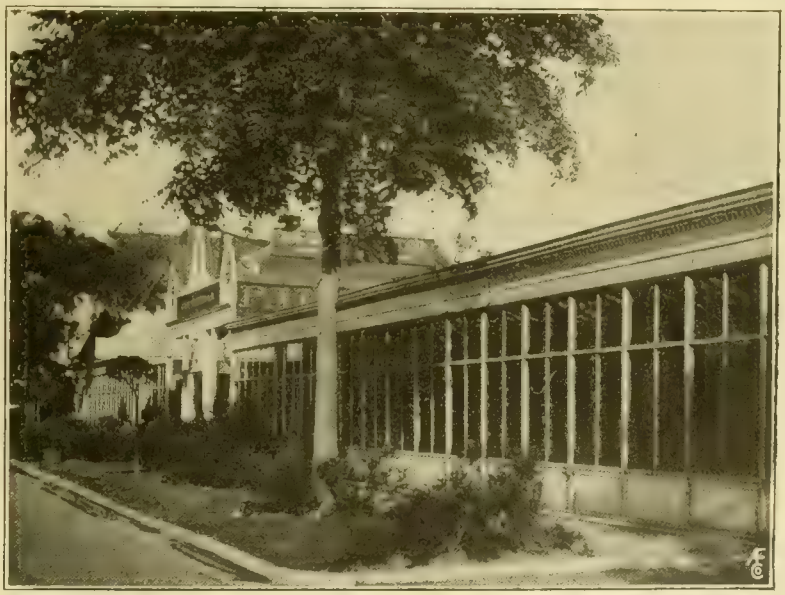
Bob Northam returned to his labors with Geo. Reinberg on Wednesday after a two weeks' fishing trip at Iron River. Bob claims that he caught lots of brook trout and intended shipping a mess to his friends on the market, but was prevented by the state laws.

The Geo. Wittbold Co. is pushing the nursery end of its business and, as a help along this line, has planted the space in front of the Buckingham place store with shrubs. As will be seen in the accompanying illustration, it makes quite an adddition and should prove an advertisement of value.

J. H. Prost, city forester, Room 51, 200 Randolph street, has issued Pamphlet No. 1, giving information regarding the tree planting movement in the city and a copy of the ordinance. Every city florist should get a copy as these pamphlets mean a good deal to them in a business way.

John Zech, who has been under the weather for a week, is recuperating and feeling more like his old self again.

Wietor Bros. have about finished planting their roses.



THE GEO. WITTBOLD CO'S RETAIL STORE, CHICAGO.

Showing Shrub Plantings in Front.

Pittsburg.

TRADE FAIR.

Business still continued fair during the past week but the last few hot days has put somewhat of a crimp in it. Stock is coming in very unsatisfactory. Carnations are very poor. Asters have made their appearance in this market, also some very fine outdoor peas.

NOTES.

The matrimonial fever still continues to rage among the wholesalers. The latest surprise was Karl Klink of the McCallum Co. and Miss Clara Goodman of Rochester, N. Y., and from all indications this does not end it as there are still other cases in docket.

Geo. McWilliams, Natrona, is making preparations to enlarge his plant.

Chris Henueses has his trunk packed and is ready to leave for Atlantic City.

Harry Hamm, Homewood, is remodeling the front of his store.

Henry Wiggins, Butler street, is now connected with the police force.

W. Q. Potler of the McCallum Co. leaves Saturday for the north.

Wm. Cormack, Irving, reports business a little slow.

Visitors: M. Shattls of Lyon & Co., New York; S. Green of H. Bayersdorfer Co.; Cohen, Wertheimer Bros., New York; — Sterns, Sefton Bros. Co.; Geo. F. Huscroft, Steubenville, Ohio; Mrs. Robens, Sewickley.

Tarrytown, N. Y.

JUNE FLOWER SHOW.

Strawberries as large as hens' eggs, roses of all colors and sizes, hardy flowers of every description, and special exhibits of palms, ferns and herbaceous flowers were the attractions offered at the June exhibition of the Tarrytown Horticultural Society, held in the young men's lyceum on the afternoon and evening of June 15. Hundreds of visitors expressed themselves as delighted at the beautiful sight that greeted their eyes. This exhibition, which is one of the finest of its kind, was made possible through the interest taken in it by the wealthy women from Yonkers to Ossining. One of the greatest attractions, and the class that was hardest to judge, was the work of school children, and so well had each contestant arranged his or her exhibit, the judges were puzzled as to what school children should get prizes. The following is a summary of the exhibits and the prize winners:

Collection cut hardy perennials:—Mrs. Henry Siegel, (T. Aitchison, gardener) first; Miss Blanche Potter, (George Wittlinger, gardener) second.

Three quarts of strawberries, three varieties:—Joseph Eastman (Robert Angus, gardener) first; Mrs. J. B. Trevor, (H. Nichols, gardener) second.

Two quarts of strawberries, two varieties:—Joseph Eastman, first.

One quart of strawberries, any one variety. Joseph Eastman, first; Mrs. Isaac N. Seligman, (John Brunger, gardener) second.

Vase 25 blooms, hybrid perpetual roses, assorted:—Gen. E. A. McAlpin, (John Woodcock, gardener).

Collection of outdoor roses:—Gen. E. A. McAlpin, first; Alfred L. Squires, certificate of merit.

Six varieties of outdoor roses, six of each:— Mrs. Isaac N. Seligman, first; Mrs. J. B. Trevor, second.

Three varieties of outdoor roses:—Gen. E. A. McAlpin, first; Mrs. Isaac N. Seligman, second.

Twelve outdoor roses, any one variety.—Miss Blanche Potter, first; E. H. Weatherbee, (F. Milne, gardener) second.

Best vase roses:—Mrs. F. A. Constable, first; Mrs. Max E. Sands, (Thomas Lee, gardener) second.

Display outdoor climbing roses:—Mrs. J. B. Trevor, first; Mrs. Isaac N. Seligman, second.

Twelve roses, Frau Karl Druschki:—Miss Blanche Potter, first; Mrs. Henry Siegel, second.

Collection sweet peas:—Mrs. J. B. Trevor, first; Miss Blanche Potter, second.

Display of antirrhinums:—Mrs. Isaac N. Seligman, first.

Vase of roses, (amateurs only):—Richard Meany, first.

Bouquet of wild flowers, (competition open to school children only):—Margaret Gibson, first; Pauline Hughes, second.

For the most artistically arranged vase of flowers:—Mrs. F. A. Constable, first; Mrs. J. B. Trevor, second.

Twenty-four blooms of hybrid tea roses:—Gen. E. A. McAlpin, first.

Collection of wild flowers, each variety to have the common name attached, and the botanical name if possible:—Miss Annie Lee, first; Miss Caroline Rosenstein, second; Master Trigfa Hoff, third; Master Harold Neubrand, fourth.

Collection of flowers cut from hardy shrubs:—Mrs. E. H. Weatherbee, first; Dr. Carroll Dunham, (Alex. Maitland, gardener) second.

The F. R. Pierson Co., received a certificate of merit for a display of palms, ferns, and herbaceous flowers; also a certificate of merit for a vase of Gladiolus America, which was one of the most beautiful exhibits of the show.

Scott Bros., Elmsford, received honorable mention for their display of peonies.

The judges were Thomas Cockburn, of Ossining; William Cowan, of Mamaroneck, and James Dexter, of White Plains. Great interest was taken in Class 8, which was for J. H. Troy's silver cup for the best collection of outdoor roses. The winner must get first two years before he can own the cup, and Gen. McAlpin will have to look after his laurels next year, for he is going to have strong competition.

READING, PA.—The building at 636 Penn street, known as the Penn Flower Shop, is being torn down. It is one of the oldest landmarks of the town.

PEONY SHOW AT HORTICULTURAL HALL.

Probably never has a finer display of peonies been shown at an unscheduled exhibition at Horticultural Hall than that which was given June 19. While the exhibition was unheralded, many visitors were attracted to the show, which was opened at 10 o'clock and closed at 2 p. m. No regular prizes were offered, but gratuities were awarded, the superior character of the exhibits demanding official recognition from the society. The small exhibition hall was used, and this was filled, peonies predominating, although there were other flowers. A vase of magnificent Iris pallida Dalmatica from Redgates, the fine estate of Charles W. Parker at Marblehead Neck, occupied a prominent position near the entrance, and beside this was the flowering vine Coronilla varia, with curious pink flowers, from the same place. On this table also were shown a collection of seedling German iris by F. J. Rea, of Norwood, and vases of the new dwarf Spanish iris and Lilium croceum from the greenhouses of W. W. Rawson & Co., of Arlington.

The peonies made the show, however, and there was almost every variation fom dark red to white. Wm. Whitman, of Brookline (Martin Sullivan, gardener), was the leading exhibitor, with 105 vases of double peonies and 19 vases of singles. Of the former, Dean Hole, a pink, was one of the handsomest, while the singles had their most attractive specimen in Lady Lillian Ogle, a white with a yellow center. The Moonstone, a red with yellow pistils which powdered the petals with gold, was another handsome variety. These were displayed on a side table along the hall, and 17 more vases were on a center table. At the end were five vases of the pink and white Magnifica, the finest peony shown, from the same estate. On one of the center tables Mrs. John L. Gardner of Brookline (Wm. Thatcher, gardener) had 25 vases of peonies, notable among which was a rich pink having petals fringed with white, Elegans Superbissima.

E. J. Shaylor of Wellesley Farms occupied part of two center tables with 117 varietes, one of the finest of which was Lady Alexander Duff (?), a light pink. The original label of the first imported stock was shown. A vase of Ceres, with pink petals surrounding white quilled petals and a deep pink center, was striking. A novelty in this exhibit was the lemon-colored Lutea Plenissima. T. C. Thurlow of West Newbury also had 117 vases of peonies, besides Kalmia latifolia and two irises, Sibirica and Sibirica Orientalis. In large vases were shown the pink L'Esperance, the light pink Achille, the white flecked with red Mme. de Verneville and the red Mme. Mechin peonies. These were placed on a side table running the length of the hall. George Hollis of South Weymouth showed 15 varieties (40 blooms) of new seedling peonies, including Rev. L. W. Atwood, a white; Seraph, a light pink; Mrs. Josephine March, a white, and President C. W. Eliot, a pink, none of which had ever before been exhibited here and probably anywhere.

A Paris Rose Show.

Paris, June 19.—The prettiest sight in Paris just now is the roseraie, or rose garden, in the Park of Bagatelle, where 50,000 rose bushes are in full bloom, presenting a truly superb spectacle in their glorious array. Yesterday the international jury, presided over by M. Chausse, president of the municipal council of Paris, and comprising Alexander Dickson and William Paul, of England; Peter Lambert, of Germany, and Quentin Beauchart, Rebeillard, Graveraux and Escudier, of Paris, examined the roses to award prizes for the finest new species created during the present year.

After five hours of investigation they gave the gold medal of the Grand Prix de Bagatelle to Lyons, the large curly petals of which are of delicate tints, varying between pink and orange. It is a hybrid tea. The gold medal for the best new foreign bred rose of the year was awarded to a Luxembourg variety, Mme. Ségond Weber. It is salmon color, and is also a hybrid tea. Another prize was awarded to the German rose, Frau Oberhofgartner Singer, the undulating petals of which are white at the base, with dainty, pearly pink tips. At Bagatelle there is also a magnificent display of colored water lilies, including several hundred varieties. The sight is well worth a visit of American travelers.—New York Tribune.

CINCINNATI, O.—The greenhouse in the rear of the residence of Mrs. James H. Perkins, Stettinius avenue and Observatory road, Hyde Park, was completely destroyed by fire June 13 with a loss of $8,000.

Rochester, N. Y.

The regular monthly meeting of the Rochester Commercial Florists' Association was held June 14. The principal business of the meeting was a discussion of the plans shown for the flower show to be held in November next. All present were very enthusiastic over the plans shown at this meeting and confident that a flower show carried out on these lines will be a fine thing for all concerned. A. H. Secker, vice-president of the association, who is leaving the city, having accepted a position with a trade paper to act as representative for Philadelphia and vicinity, announced his resignation, much to the regret of all the members of the association, and he leaves with the best wishes of all for success in his new undertaking. E. P. Wilson was elected to fill the vacancy caused by the resignation of Mr. Secker. S.

THE SLAUGHTER OF THE INNOCENTS.

The slump continues. The slaughter goes on. Nothing is safe from the cutting and slashing of the mad throng. And yet they do not move. Standing in battle array awaiting the coming purchaser, regiment upon regiment, battalion upon battalion droop and wilt, and company after company finally drop out of line and are picked up by the Grecian army of camp followers or find their last resting place in that hospital for sick flowers "from which no traveler returns."

A GLUT, AND THEN SOME.

Peonies to right of you, peonies to left of you, peonies in front of you. No matter where you turned there were peonies. All sorts and conditions—in all stages of sobriety from the glorious Festiva Maxima to the miserable "cull" on which the grower is wasting the transportation charges. Thousands are going into cold storage against the time when the supply will diminish, the dealers adopting this plan figuring that they can realize better than holding charges by this method. But it is always to be remembered that the aster follows close on the heels of the outgoing peony and whether this will prove a wise move this year remains to be seen.

THE ROSE SITUATION.

There is very little that can be said about the rose situation that has not already been said. New American Beauty, Kaiserin and Killarney are of exceptionally good quality and should bring better prices, but the glut in the peony market has put its blighting hand on these flowers and restricted the demand to a minimum. A few very handsome My Maryland and President Carnot were seen and, on account of their scarcity, brought fairly good prices. Bride and Bridesmaid are a fraction better than they were a week ago, but the demand has fallen off. Lily of the valley is good property and there is a steady demand. Sweet peas are in great profusion and with daisies and cornflowers are moving fairly well. There has been quite a good deal of funeral work the past week and a good deal of stock has been worked off in this way. Wedding orders have not been much of a factor. The Greek merchants have helped the situation materially, and without this outlet the market would have been in a very bad way.

W. J. SMYTH IN AUTO ACCIDENT.

W. J. Smyth will probably be laid up for the next six weeks as a result of being pinned against the side of the barn by his automobile last Sunday at his summer home at Lake Marie. An X-ray examination at St. Luke's hospital on Monday disclosed the fact that the large bone above the kneecap had been fractured, which will necessitate the wearing of a plaster cast.

Believing the brake to be set Mr. Smyth was cranking up his machine when it moved forward and pushed him up against the side of the door post and held him there until his cries attracted the attention of persons in the house close by, who came and released him. Dr. D. H. Williams was summoned and advised his immediate removal to a hospital and an early train was taken for this city.

NOTES.

H. R. Hughes of West Van Buren street has a very pretty window, suggestive of summer. A large sheet of water, made possible by the ingenious use of a big tarpaulin, is surrounded with rustic effects. Ducks and gold fish disport themselves there, and water lilies float on the surface. Near by is a park scene with a baseball diamond, and players are well carried out as to scale and very realistic. Hundreds of people are attracted, and it is quite one of the sights of the neighborhood.

A committee of the Florists' Club is considering the proposition as to the place at which to hold the annual picnic. A very favorable offer has been made by the Riverview park people to use the picnic grove that adjoins the amusement park. This grove contains a baseball diamond, track, restaurant and other features, and can be reached from any car line in the city. It seems the logical spot for this affair, which is billed to come off the latter part of July.

Miss Caroline Hollenbach, daughter of Peter Hollenbach, 1724 Fulton street, and George W. Strickert of Blue Island were married at the home of the bride June 15. Only the immediate family was present. After a trip through Colorado Mr. and Mrs. Strickert will be at home at 1636 Fulton street.

Relative to flowers at school exercises W. N. Rudd, secretary of the S. A. F., writes: "I wish you all success in the matter and shall be very glad indeed to assist in any way that I can. Should there be any subsequent meetings I will make it a point to attend."

Flowers must not be presented at school exercises, but the eighth grade teacher at the Kosminski school has taxed each boy in her class 30 cents for ice cream that she says is to cost 60 cents a quart, and each girl must bring a cake.

E. A. Asmus, formerly of 1860 Evanston avenue, and recently in the forestry department of the United States government, has opened a place in Billings, Mont., which will be known as the Billings Greenhouse Co.

E. H. Hunt has put a new sprayer on the market that, it is claimed, will never wear out. The sprayer is made of aluminum and contains two brass plates or discs one with large and the other small perforations.

Some exceptionally fine varieties of Cattleya gigas, of the Sanderiana type, are flowering in one of the big conservatory annexes in Garfield park. These are very much above the average.

H. A. Eckert is the latest addition to the working force of the A. L. Randall Co. He is in the supply department and will go on the road for this house about August 1.

Bassett and Washburn are showing some exceptionally fine Kaiserin and Carnot roses. They have a large range of glass planted exclusively to these summer roses.

Poehlmann Bros. have added a $600 team of mules to their live stock. August Poehlmann claims they have anything beaten this side of Texas.

Charlie McKellar has added an Oldsmobile to his racing string and was a prominent figure at the Cobe cup races at Crown Point, Ind., last week.

Leonard Kill was also an interested spectator of the mad flight of the speeding autoists in their wild dash around the "S" curve on Friday.

James King, the peony grower of Elmhurst, states that he has had better success with his growing this year than in any previous season.

The American Beauty roses now being sent in from Peter Reinberg's range at Summerdale are particularly choice.

Visitors: Mrs. A. L. Glaser, Dubuque, Ia.; W. A. Hartman, South Haven, Mich.; —— Hurst of Tipton & Hurst, Little Rock, Ark.

(OTHER CHICAGO NOTES ON PAGE 1127.)

*Do not fail to attend the meeting at Peter Reinberg's at 3 p. m. Thursday. The committee to visit the school board will leave from there n body.

Manhattan Flower Market

WHOLESALE FLORISTS

Telephone: 1016 Madison Sq. 46 W. 28th St., NEW YORK

Ship us some stock. We need a large supply of all kinds of flowers, **Roses, Carnations, Sweet Peas, Narcissus, Summer Stock, etc.,** for our new store. Reliability and responsibility first-class. Good prices and prompt returns. Good opportunity.

New York.

SUMMER DULLNESS.

Summer dullness has settled down over the wholesale district. Prices during the past week were on the toboggan and it was hard to keep them in sight much less to follow them. When our last report was sent in it did not appear that the best carnations could sell lower than $2 per 100, but they did. A leading dealer said it was the first time since he went into business that he had to throw away such good stock. Other stocks were equally as bad, possibly worse, from the fact that carnations in quality have, as a rule, held up better than roses. Rose stock, as a rule, has been very poor and to complicate the situation Gen. Jacqueminot have been arriving in by the thousands, going largely into the hands of the street vendors. The peony surplus cannot be handled on the street to advantage, therefore it goes sailing down the bay with the dust and ashes of the city. The sailing of a number of steamers on Saturday, June 19, made considerable business for the retailers, as the steamer trade seems to be on the increase, but little impression was made on the surplus. When the peonies are gone and the growers throw out their carnations we may expect some relief.

June 23 (by wire).—We are experiencing the worst glut ever seen in this market. The best American Beauty roses are selling for 10 cents each, fine carnations at one cent and lilies two cents each, with all other leading stocks at similar low prices.

NOTES.

The Rev. Peter E. Reilly, pastor of St. Henry's Roman Catholic church, at Broadway and Twenty-sixth street, Bayonne, N. J., forbade on June 20 in the pulpit the presentation of flowers to the parochial school graduates at the commencement this week. "Generally," said Father Reilly, "a few graduates whose parents and friends can spare the money, receive elaborate displays of flowers, while other graduates, who may be the intellectual flowers of the class, receive none because their parents and friends cannot buy them. In order that there shall be no heartaches because of flowers I have decided not to permit any to be presented." While not denying that there is some logic in the above, we do not think that it is a matter intimately connected with the saving of souls.

Sam. Snyder, who has a retail store at 1115 Second avenue, has no longer any reason to feel lonesome. The entrance to the new Queensboro bridge is almost at his door and he is in a position to "catch 'em coming and going." And, speaking of the new bridge, its opening was fittingly celebrated by the florists on the Long Island side. The Siebrechts, John Donaldson, John Miesam, Phil. Kessler and others made the eagle scream and do stunts until the poor bird was almost tired out.

The fishing schooner Faustina, which arrived here June 22, had on board the 17-foot tin monitor which the G. A. R. of Trenton and Camden, N. J., set adrift Memorial day. The strange craft was decked with flowers when it was picked up 35 miles off the Jersey coast. Along the side of the boat was painted the legend: "In memory of our sailors."

Tom King, a well-known peddler of flowers, who at one time had considerable trade about the tenderloin resorts, threw himself from the platform of the L road station at One Hundred and Tenth street to the street on June 21, and was instantly killed. King was lame and of irregular habits, and it is probable that he was driven to desperation by his bodily infirmity and poverty.

Mrs. E. J. Polykranas, wife of the well-known retailer of 665 Columbus avenue, who spent seven weeks in St. Luke's hospital after an operation for a complicated case of appendicitis, has recovered sufficiently to return to her home. She is a popular woman in the society in which she moves, and many friends will rejoice at her restoration to health.

S. J. Reuter of Westerley, R. I., was in the city on June 22. He is this season erecting new houses that are now ready for glazing and that will have an area of 60,000 square feet of glass. Roses are extensively grown at the Reuter range and many of them are sold by Moore, Hentz & Nash of the New York Cut Flower Co.

Theodore Outerbridge of Sunnylands, Bermuda, is visiting old friends in this city. He is an extensive grower of lilies and sago palms. He says that while it cannot yet be determined how the lily crop will turn out, indications when he left Bermuda were favorable.

During July and August the New York Cut Flower Co. will close at 1 p. m. As previously stated in these columns this company never opens on Sunday and it seems to have continued and increasing prosperity.

A. H. Langjahr makes no pretentions to being an "orchid king," but he has of late been handling very fine blooms of cattleya.

Millang Bros. are now handling a particularly fine line of cut lilies, as well as a good variety of all other stocks.

Horace E. Froment has been serving on a jury in the criminal court.

Trade is good and weddings are very much in the limelight at present. School commencements will give us all we can take care of for the next week. But there is a noticeable depreciation in the number of flowers used, probably due to the fact that a great many bunches do not reach the ones they are intended for. To try and overcome that condition President Slattery of the Florists' Club, had an interview with the superintendent of education and suggested the feasibility of the florists sending some one to take charge of the flowers at the schools or halls, which was readily agreed to by the school department. A meeting of the club was called for Saturday evening to act on the interview of President Slattery, but unfortunately the store men were not there, and only representatives of different stores and two proprietors. From the talk it was apparent that an organization of the proprietors of the different stores was the only way that the situation could be overcome, and not through the B. F. C., which is composed of proprietors and all affiliated with the florist business in every capacity, which no doubt is advisable. However, it is too late this year to cope with the situation, but it is hoped that some action will be taken that will revive the interest that has been lagging, owing to the fact that a few were disappointed and did not receive a bouquet. It would be far better for the florists to supply bouquets to the one who had none than to let the good revenue that comes for that week be discouraged by the school principals, and others who come in contact with those who from one cause or another do not receive a bouquet. While this is a condition here it no doubt applies to other cities and suggestions from them would, we are sure, be appreciated.

WEATHER INJURES STOCK.

Real summer weather has set in, with the glass mounting above 90° in the shade. The stock coming in shows the effect of this extreme heat and is rapidly deteriorating. Eastern rose stock, American Beauty, Killarney and Kaiserin, have the call, the Beauties and Kaiserines are particularly fine, as good as the best seen here during the winter season. There are still a few storage peonies which come out in fine shape, and are used to good effect in decorations. Sweet peas are better this week, the stock lately having been spoiled by the severe rains. Water lilies from the south, fancy varieties, are used for window decorations. Iris Kaempferi is in and the large showy blossoms are fine in decorative effects. Good lily of the valley is a trifle scarce, as are cattleyas, which are held at $6 to $7.20 per dozen. Business is fairly good for the season. There have been several important weddings, Pennock Bros. having the Pave wedding at Radnor on Monday last, and Battles the Fell wedding on Wednesday. At this latter function Easter lilies had the call, something over 1,500 blooms being used.

NOTES.

Dennis Connor, the wide-awake representative of the Lord & Burnham Co. in this city, reports the erection of a new orchid and palm house for Louis Burk, Esq., at Broad and Jefferson streets. The orchid house is 18x30 feet, and the structure for palms 26x50. The orchid house is to face on the street with plate glass front and to be kept at all times filled with plants in flower as was the custom with the Baldwin Conservatory years ago on Chestnut street. This is a most praiseworthy undertaking and one that will be greatly appreciated by the citizens in this section. Mr. Connor has also received an order for a house 60x200 feet for F. T. Way & Bro. of Kennett Square. This is in course of erection and will be used at first for tomatoes and carnations. A prominent feature of the house is a shadeless ridge pole which is set back from the center by having the longest slope of the house to the south, and in this way there is no shadow from this usual source.

T. Neilson Geiger, Florist, is the sign on the window of the new cut flower store on Thirteenth above Walnut, where Wallace Faust and Charles Malby are the artists in charge. Under the guidance of these old war horses things should hum. Mr. Geiger is a broker with a fancy for the cut flower business, and has fitted up the shop in first-class style. An ice box 3½x12 feet, finished in white enamel, with large sliding doors and large slabs of white marble in place of the usual mirrors on top around the ice chamber is a feature. White marble slabs cover the counters, which are placed against the wall, over which are arranged wide shelves in two sections, between which is a ribbon case and underneath a neat writing desk for customers' use. There is a fine display window. All the woodwork of the fixtures is finished in white enamel. A cross counter at the end is to be used as a work bench. It is certainly a handsome little store and we extend our congratulations to the proprietor and his able assistants, Messrs. Faust and Malby, and wish them every success.

The action taken by the Horticultural Society in deciding to sell the hall and repay the bondholders is a great disappointment to the craft in this city who have thought that there would be a way found to avoid a sale. It is hoped something can yet be done to stave off this which is nothing short of a catastrophe for the society.

Wm. McKissick & Bros. had an order for over 1,000 Easter lilies this week and also handled hundreds of eastern American Beauty roses. They report business very good for the season.

At Niessen's busy market American Beauty roses are handled in large quantities of very good grade for local stock. Cattleyas are also a specialty.

Glazing is now going on at the Craig Co.'s new addition, and it is expected to have the houses planted before July 1. K.

Pennsylvania Horticultural Society.

At the meeting of the Pennsylvania Horticultural Society, held June 15, it was determined to sell the property and pay off the bondholders, which will cost the society $200,000. It was contended that as the usefulness of the hall as a place for the holding of social functions had been seriously impaired by the superior advantages offered by the new Bellevue-Stratford hotel and that as there appeared no hope of getting this trade back, and the building not being fitted in many respects for a general public use, it had better be sold before it ran into debt. Much stress was also laid on the amount of money that would come to the Horticultural Society as the result of the sale, as on account of the small amount in the treasury it had great difficulty in keeping faith with its exhibitors in the payment of premiums. The enviable position of the society, with an income of at least $12,000 per year as the result of $300,000 at interest, and the great good it could and no doubt would do with such a sum annually at its command, was also another argument as seen by the bondholders. Again, it was said that in the event of the trustees for the bondholders giving up the hall, releasing or returning it to the society, it would be a white elephant on its hands as it could not run it, having no capital; the society is not chartered to carry on such a business and would soon get heavily in debt. These were the main points brought out by the bondholders, the owners of the building, who ask the society to sell the entire property and return to them the sum of $200,000, which it will take to redeem their bonds at the face value. There have been several offers made for the property, the latest being in amount $300,000. It is said by real estate men to be worth at least $600,000, and likely to bring this amount if not forced on the market. Much stress is laid on the following clause in the lease, made by the society to the bondholders before the building was erected, the lease reading to run "for the term of 30 years from the twenty-eighth day of November, 1894, or until the principal of all the certificates issued to provide funds for the erection of the new hall shall have been paid."

The above clause is cited to show that the society cannot come into possession of the building until these bonds are all paid off. A further clause says: "The lessees further agree during said term to keep, and at the end thereof, or sooner determination of this lease, peaceably, to deliver up the premises in good order and repair." The final clause is most important and says: "If the said lessees shall fail to remove from the said premises at the expiration of this lease as herein above provided, or if said lessors shall not well and truly perform all the covenants and agreements herein contained on their part to be performed and kept, then this lease shall at the option of the said lessors cease and absolutely determine." Now the main clause covered by "keeping of all the covenants and agreements," is the payments of all fixed charges, such as taxes, water rents and insurance. It is the fear of there soon being insufficient funds from the earnings of the hall to meet such payments that has brought about this desire to sell. There is in addition to the lease a paper called "an agreement" between the society and the trustees for the bondholders, but which seems to contain little of interest except that the society shall appoint three members of the house committee to act in conjunction with a like number of men appointed by the bondholders to take charge of the building and its contents. They also agreed to pay one-half of the wages of the janitors and the engineer. To the best of my knowledge these two clauses died in their infancy as no reports have been received from the house committee nor bills approved for janitor's services been offered to the society in recent years. There is no clause in either the lease or agreement in which the society binds itelf to recompense the bondholders, provided their venture did not prove to be successful. The following clause in the prospectus of the syndicate shows their great expectations for the success of the venture.

It is confidently believed that the property with a new and attractive building suitably arranged for the purposes above indicated will be worth a large sum and that its rental capacity will be worth not less than $20,000 per annum, or at least $10,000 net, after the payment of taxes, insurance, cost of maintenance and repairs, and will be sufficient security for a loan of $200,000 represented by bonds with 30 years to run. It is said by some that the building of the hall was a partnership matter between the society and the syndicate of bondholders, but I fail to see it so expressed or inferred anywhere in either agreement, while it is expressly stated in the last paragraph of the lease above referred to "that if the said lessors shall not well and truly perform all the covenants and agreements on their part this lease shall absolutely determine and the society, the lessors, shall recover possession of the premises. It is for fear of their inability to longer perform and keep all the covenants and agreements that they now desire to sell and ask the society to reimburse them. And this the society at its last meeting has agreed to do. I hope this hasty action is not final. The deed of trust especially provides against the encumbrance of the fund in any manner whatever, and the effect of this arrangement if carried out in the payment of $200,000 to the bondholders is exactly the same as if a mortgage of this amount was foreclosed, and the property sold to satisfy the same, and the courts may also take this view of it. Before the hall was built an offer was made for the ground with the ruins of the burned hall on it of $250,000. The offer of the syndicate, however, looked so good it was thought best to let them go ahead. If they had said, gentlemen, we are going to build you a beautiful hall at an expense of $200,000 and give you the free use of it for 15 years, but at the expiration of that time we will expect you to sell the property and return us our investment, I wonder how many would have agreed?

ROBERT KIFT.

SPRINGFIELD, O.—The Leedle Floral Co. says that roses have never sold better than this season.

NEW BRITAIN, CONN.—Business has been good this spring, especially Decoration day, although flowers were scarce, more particularly carnations; there never seems to be enough baskets, and bunches have sold well.—T. E. B.

A GLUT OF STOCK.

Odds and ends attendant upon graduation and receptions with a few weddings here and there have left things moving slowly around town, but the enormous quantities of stock being thrown on the market decrease but little from day to day. Wedding decorations are fewer this June than for years, a very strong feeling of subdued simplicity marking everything so far attempted in this line. This week officially terminates the local season and from here on the long summer season prevails with wicked effect upon storekeepers. The market is flooded with all kinds of mid-summer goods, with first class stock at a premium. American Beauty roses are holding their own firmly, and a few good Killarneys are obtainable. Outside of these and Kaiserin there is little variety. The first outdoor roses are coming in and we now enjoy real Jacqueminots, a treat in these advanced times. Carnations are constantly pouring in and the sight is rather a ridiculous one when we note the thousands already on sale at any price. Cattleyas have dropped out of sight suddenly, and the few growers fortunate enough to have them on hand are easily getting $5 per dozen.

NOTES.

Herbert T. Capers, the well-known sales agent with headquarters at the Music Hall Market, was quietly married June 16 to Alice J. Evans, daughter of the late Charles and Mrs. Evans of Watertown. The groom is the son of Thomas Capers of Wellesley, the ceremony uniting the families of two of the best known commercial growers in New England. The happy pair are at present enjoying their honeymoon and are expected home this week. Mr. and Mrs. Capers will reside for the present with the bride's mother, Mrs. Charles Evans, in Watertown.

Thomas F. Galvin (Inc.) were the decorators conducting the floral arrangements incident to the Cobb wedding at Marblehead this week. This was the most elaborate wedding of the season and the house and grounds were lavishly dressed for the occasion; the skill and taste of the entire scheme appealed to a most critical list of guests, who loudly commended the directors.

An unscheduled exhibition of summer flowers was held at Horticultural Hall June 19. Peonies comprised the great attraction, the wonderful display proving a great drawing card for the thousands of people who were amply repaid for the time involved.

Welch Bros. are wholesale agents for Gladiolus America, the product of their growers ranging well among the large list of good growers now sending this new factor to market.

Henry M. Robinson is spending a few weeks in rest and recreation on his farm in Keene, N. H. B.

The Seed Trade.

American Seed Trade Association.

Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., in progress.

HOLLISTER, CALIF.—The Bank of Hollister is reported to have sued Pieters Seed Co. for $13,183.35.

THE John H. Allan Seed Co. is doing a good deal of contract pea growing in the vicinity of Columbus, Wis.

LEON ESTERBROOK succeeds Lisle Morrison as assistant in charge of congressional seed distribution at Washington.

CHAS. N. PAGE, of the legal committee of the American Seed Trade Association, will make the convention via Washington; he passed through Chicago June 18.

SIOUX FALLS, S. D.—The O. S. Jones Co. is erecting a new seed house of concrete four stories high with a stone front. The building will be made fire and rat proof.

ST. LOUIS, MO.—Adolph Corneli, of the Schisler-Corneli Seed Co., reports the onion set crop about the city looking very well in spite of the rain, the cool weather apparently suiting the crop well.

KNUD GUNDESTRUP writes from Copenhagen under date of June 10 that the weather is still cold and backward and that there will be much less cabbage seed than usual sent to this country this year.

LA PYRAMIDE-TRELAZE, MAINE AND LOIRE, FRANCE.—J. Vaillant retired June 1 from the firm of Bas & Vaillant for personal reasons. The seed business will be conducted by Paul Bas on his own account.

ONE California seed grower reports that there will be a possible shortage of Red Wethersfield, White Globe, White Portugal and Yellow Prizetaker onions. He believes that the season will produce a reasonably good supply of other varieties.

WESTERN wholesale seedsmen are disposed to ask 25 cents per bushel more than last year for both peas and green-pod beans. Cucumbers should be five cents higher and muskmelons ten cents. Watermelon seed should be five cents lower. Turnip, parsley and spinach should be advanced if the Aldrich bill becomes a law.

GOODWIN BRASLAN, the 16-year-old son of Chas. P. Braslan, and named for Aug. H. Goodwin, vice-president of the W. W. Barnard Seed Co., Chicago, has begun a possible seed career by engaging with Vaughan's Seed Store at 25 Barclay street, New York.

SEDALIA, MO.—L. H. Archias of Archias Seed Store, will visit many New York and New Jersey points and also the seed growing districts around Detroit and in Wisconsin while on his convention trip. Mr. Archias will be accompanied by his wife and son, L. H., Jr.

ST. LOUIS, MO.—D. I. Bushnell made an Illinois river excursion with a party of eight friends two weeks ago. "Bush" has to "dig" for ancient relics, but this world's goods come easy to him. Mr. Bushnell will spend his vacation at his old home in Massachusetts.—Madam Corneli, mother of Adolph and Ben, passed away May 26, aged 78 years. She had been in ill health for several months.—F. Benary, Jr., called last week enroute to California.

CHICAGO.—Contract prices on the board of trade June 16 for grass seed were noted as follows: Prime timothy, $3.90 (nominal); white clover, $16.—F. H. Henry, of Henry & Lee, and wife and daughter passed through Chicago Thursday, enroute from New York, intending to sail from San Francisco June 24 direct for Yokohama.—H. W. Bruns is now at 196 West Randolph street.—W. W. Barnard is improving and is now believed out of danger.—Visitors: Adolph Corneli of the Schisler-Corneli Seed Co., St. Louis; L. H. Archias, wife and son, Sedalia, Mo.; Albert L. Hart and wife, of C. C. Morse & Co., San Francisco, Calif., enroute to convention; J. L. Peppard, of Kansas City, Mo., and F. T. Barteldes, of Lawrence, Kans., enroute to convention; they will visit New York before returning home.

Leonard Seed Co.'s Warehouse.

We show on page 1117 a view of the S. F. Leonard Seed Co.'s new warehouse at Columbus, Wis. This building covers a ground area of 48x87 feet, and is one, two and three stories in height. The main storage part is 48x67 feet, one story high. The second floor of the two-story section (20x48 feet) is also partly for storage, but the second floor is devoted to hand picking; a large enough force being kept to handle two cars per day. The mills are on the first floor. All the conveying, lifting, etc., is done automatically, seed never being touched from the time it goes into the hoppers until it reaches the picking room. The elevator section is to go 15 feet higher this season to provide additional bin room. The "bug house," for killing weevil is, of course, a separate building. As a precautionary measure, clean seed as well as seed that is affected goes through the same process.

New York Seed Bill Fails.

MARSHALL H. DURYEA writes the AMERICAN FLORIST, June 19, advising that the so called Callan pure seed bill has not been signed by Governor Hughes, consequently no further legislation on same can be accomplished until both houses meet next winter.

Bermuda Onion Seed Crop 1909.

ED. AMERICAN FLORIST:

In my opinion the crop of White Bermuda Crystal Wax onion seed will not entirely fill contract orders. However, prospects to date are fair and little damage need now be expected from disease. The most damage possible is from wind. I believe, however, that a larger percentage will be delivered on advance orders than in 1908. F. C. V.

Teneriffe, May 29.

Red Top Grass Seed.

B. E. Martin, Salem, Ill., writes June 22: Up to this writing we have had ideal weather for the growing crop, and the indications are that we will have a fine yield of seed. Quite a good many meadows were plowed up last spring, having been damaged by the dry weather of last fall. Owing to this shortage in acreage we are not expecting a very much larger yield of seed than we had last year, but I think the quality will be better. The harvest will be somewhat later than last year owing to the cold weather at the beginning of the season.

Kentucky Bluegrass Situation.

The telegraphic reports below indicate the condition of the bluegrass seed crop at various Kentucky points:

Winchester, June 23.—The harvesting is just completed here and the yield is estimated at somewhat less than last year, but 25 per cent greater than the average for the past five years' yield. Both germination and color are considerably injured by frequent rains before and during harvest operations. From 40 cents to 45 cents per bushel is the ruling price for seed from the stripper.

DAVID S. GAY.

Paris, June 23.—The bluegrass harvest is completed with a resulting crop of 60 per cent of last year's. The stocks of old seed are about 65 per cent as compared with the quantity carried at this date in 1908, and prices will be higher than those of last year. Local dealers have bought freely and farmers will pool their holdings.

CHAS. S. BRENT & BRO.

Lexington, June 23.—About 450,000 bushels of seed have been stripped against 615,000 bushels last year. About 150,000 to 200,000 bushels were carried over against 300,000 bushels last year. Much of the seed is dark in color owing to rains.

Allan's Extra Early Peas

While the growing of peas is a simple matter, to maintain a strain of Extra Earlys that keeps its place at the head of the line for earliness, hardiness, productiveness and uniformity, requires constant and intelligent care and watchfulness; and Allan's Early Dexter, introduced years ago and followed later by Allan's Maud S. and Sunol, have ever been and are now in the front rank and acknowledged as such throughout the world where extra early peas are grown.

Allan's Sunol, last on the list but first in quality, is the result of many years of careful propagation by Mr. Allan according to a system entirely his own, for earliness and purity and now stands without a rival. Vines vigorous, sometimes throwing laterals from the base of the stalk, bearing from four to seven pods of good size and shape, containing five to six peas of good flavor. Mr. Allan's special method of culture possesses an extraordinary degree of vitality, having matured a full crop in some sections where before frost had ruined other sorts, thus proving extremely valuable for Market Gardeners in southern states who plant for early market in a season when frosts frequently occur after growth has begun. Undoubtedly the most popular early pea for market gardeners yet introduced.

The John H. Allan Seed Co.
SHEBOYGAN, WIS.

ANNOUNCEMENT

BUSH HILL PARK, ENFIELD, MIDD'X, JUNE 1909.

Dear Sir:—

RE HUGH LOW & CO., (Dissolved)

In consequence of the voluntary dissolution of my late firm, I have much pleasure in informing you that I have taken over the **Royal Nurseries,** with the greater part of the stock. These nurseries were formed by me in 1881, under the instructions of my late father, and since his death I have taken an active part in the direction of the business.

The staff which is transferred, practically intact, includes such well-known men as my representatives: Mr. Harry A. Barnard, Mr. F. W. Ashton and Mr. Laurence J. Cook, Mr. Edward Tack as Orchid specialist and grower, Mr. M. C. Allwood, the enthusiastic Carnation man, Messrs. Moore, Reid and Meades, amongst the roses and fruit trees, and Mr. Phillips in the General Department.

I feel that with such men at my back, clients can rely upon the same care and attention being given to their business as under the old regime.

Esteeming your orders and enquiries. Believe me to be always at your service as heretofore. Obediently yours,

STUART H. LOW.

Please address all communications to **STUART LOW & CO., Bush Hill Park, Enfield, Midd'x.**

French Seed Crops.

We have had a protracted, severe winter, followed by a period of very wet weather and a rather warm month of April. May, on the contrary, has been cold, windy and parching throughout, which checked growth and the drought did considerable damage. Growers began to be discouraged when fortunately in the early days of June we were favored with some very good showers which will help along crops a good ideal. However, many articles are expected to be short next fall. This is the case with garden beets, such as Detroit Dark Red, Crosby's Egyptian, Eclipse and Half Long Blood, which are not expected to yield more than from one-half to two-thirds of an average crop. As no stocks at all of them are left from previous seasons, prices are sure to rule pretty high.

Mangels are much better off in France. In Germany many roots seem to have been winter killed.

Celeries suffered considerably during winter in our southern growing district; the plants lack vigor and as there are many gaps in the fields, it is safe not to reckon upon more than one-fifth of the contracts for Paris Golden Self Blanching, one-half or two-thirds for Pascal and Kalamazoo.

The cabbage tribe, including kohlrabis, kales, broccolis and Georgia collard, is so far one of the most promising crops in the south of France. Carrots are very backward and rather weak in growth.

Onions there (in the south) are also pretty satisfactory at present, and plantations rather large, though some show signs of disease; the result of the crop will depend upon the check or spread of that disease. It is hardly safe to prophesy just now how the crop will turn out, but I am afraid the followng sorts, White Portugal, White Globe, Red Wethersfield and Giant Spanish will fall short of the contracts.

Spring radishes in the south are not worth mentioning. In the western growing district they are most disappointing. At the time the rain came, which enabled their transplantation there, the roots had grown too large to insure a good result. Fortunately the prospects are much more favorable around Paris and some other favored locations. Winter and summer radishes in the south will yield very little, some sorts being total failures. In the western district the stand at the present state is better, though some kinds as Large White Summer, Large White Spanish, Large White Russian, Strasburg and Golden Yellow Oval may prove short.

Spinaches were very disappointing until the rains came which improved conditions considerably, but anyhow the harvest will take place later than usual and the yield will not be large.

The area planted to turnips in the leading growing region of western France is rather limited and though the outlook there is not bad, the scarcity of the seed in Germany and the many inquiries from that country will maintain the market for turnip seed steady. White Egg, Purple Top White Globe and Yellow Globe or Amber Globe are liable to fall below contract, as also the Purple Top Strap-leaved.

The condition of the rutabagas is about the same as that of the turnips.

Parsleys and parsnips are fairly satisfactory.

The necessary acreage of egg plants has been planted to fill contracts, but there seems to be a deficiency of plants in the fields and we require a little warmer weather than we are now having to develop a good crop.

Flowers in general are rather late and in some cases the plants are weak and diseased, but it is too early to anticipate the outcome.

PARISIAN.

Allan's Admiral Dewey

We wish to call especial attention to our Admiral Dewey Pea which has already taken the front rank in all the list of large podded, long-vined peas, and is today recognized as the best in its class by the leading trade in America, and we have never yet been able to supply the quantity demanded. Remarkably healthy, vigorous and productive, it is almost entirely free from sports, and in that respect is far ahead of any other large podded pea we have ever grown. Pods of the largest size, frequently six inches in length, straight, rounded at the point, deep green in color, and most beautifully shaped, well filled with large peas that are a deep green color and of the richest flavor. We unhesitatingly claim this to be the best pea of all its class. Seed large, green, wrinkled; height, 3½ ft.

No wholesale or retail dealer can well afford to leave out this pea.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

NUMBER ONE mushrooms are quoted in Chicago at 35 cents per pound, while in New York they are quoted at $1.

POTATOES to the value of $206,185 were imported into the Philippines in 1908 by far the larger quantity coming from Japan and China, $180,370 and $17,833 respectively.

THE Ontario Department of Agriculture has issued a bulletin on "Insects Affecting Vegetables," by C. J. S. Bethune, that covers the ground very completely and is well worth preserving for reference.

AN exhaustive report by A. McMeans, of the Ontario Agricultural College, Guelph, Ont., appears in the annual report of the Ontario Vegetable Growers' Association. Mr. McMeans last year visited the principal onion growing sections in Illinois, Indiana, Michigan and Ohio, and his report gives many useful cultural hints as well as statistics. It is well illustrated and worthy of perusal and we shall probably have occasion to again refer to it.

Outdoor Notes.

When planning for succession crops of sweet corn, string beans, or peas, always bear in mind that more time is required to finish a crop in the fall months than in the spring. The reason for this is that we have in the fall months no such favorable spells of weather as occur in May or June when plants grow with leaps and bounds. As a rule there is more push and life in the spring; hence, to be on the safe side allow at least 10 days more for the fall crop. There are comparatively few sections where a fall crop of peas can be made; peas do not thrive in hot weather and it is generally given up as a hopeless case. Therefore try it, if at all, on a small scale.

Beans are an excellent succession crop; so are pickling cucumbers. Where green table onions are desired, sow Prizetaker last week in June. They will be nice in October and can be stored like celery for a winter supply. An important point for summer seed sowing is proper firming after sowing. In the spring when rains are frequent and subsoil moisture ample, seeds germinate readily, in the summer this may be all the opposite. We frequently firm with the feet, or with a roller and when drilling with a seed drill at times run a second time over the rows bearing heavily on the roller to ensure proper firming; after that rake or harrow lightly to loosen the top and proper conditions are secured.

Turnips intended for table use should not be sown too early; they get large and woody and unfit for use. If we could control moisture, about August, it would be right for the western states, yet to be on the safe side, sow at least some earlier, say from July 15 to August 1. Celery should go into permanent rows just as soon as the plants are large enough—the sooner the better; nothing is gained by late planting.

MARKETMAN.

Insects and Celery.

Celery, as a rule, is not much affected by injurious insects. The handsome caterpillars of the black swallow-tail butterfly (Papilio noctilus asterias) may often be found eating the foliage, but they are never very numerous and can easily be controlled by handpicking. A small caterpillar called the celery leaf-tyer (Phlyctænia noctilus) is sometimes abundant and injurious; it feeds for the most part at night; when young it eats small holes in the leaves which are hardly noticeable, but as it grows larger it becomes more voracious and consumes a considerable amount of foliage. When fully grown it rolls up a leaf and ties its edges together with silk, forming thus a convenient case in which to pass the chrysalis stage. The moth is about three-fourths of an inch in expanse of wings, pale brown in color, with a reddish suffusion; the wings are marked with irregular cross lines of black and some circular spots. There are at least two broods in the year. The insect is sometimes known as the greenhouse leaf-tyer from its attacking a variety of greenhouse plants; outdoors it by no means confines itself to celery, but may be found on a great variety of vegetables. As soon as the caterpillars are noticed the plants attacked should be sprayed with Paris green, applied to the under side of the leaves. In the greenhouse any infested leaves should be cut off and destroyed. One of the most serious enemies of celery is the rust-fly. The maggots attack the thick part of the roots of young celery plants and prevent their proper growth; they also produce the characteristic rusty blotches on the stems and spoil them for table use.

Prices of Indoor Fruits and Vegetables.

The prices of indoor fruits and vegetables at leading points June 5 were as follows: New York, cucumbers, 50 cents to $2 per dozen; mushrooms, 75 cents to $1.50 per pound; mint, 25 cents per dozen bunches; tomatoes, 10 to 15 cents per pound; grapes, $1 to $2 per pound; cantaloupes, $1 to $2 each; peaches, $6 to $8 per dozen; nectarines, $7 to $10 per dozen. Kansas City, cucumbers, 50 cents to 75 cents per dozen. Cincinnati, cucumbers, 22 to 25 cents per dozen; mushrooms, 40 cents per pound. Boston, cucumbers, $3 to $3.50 per box. Chicago, cucumbers, .60 to $1.50 per dozen; head lettuce, $3 to $6 per bbl.; mushrooms, 40 to 85 cents per pound; tomatoes, 10 to 20 cents per pound; radishes, 20 to 30 cents per dozen bunches; grapes, Gros Colmar, $.75 to $2 per pound; peaches, $12 per dozen; English melons, $12 per dozen; peppers, 30 to 75 cents per dozen.

NASHVILLE, TENN.—Joe Browne, of the Lischey Nursery and Greenhouses has just finished a large house for roses and planted it to Kaiserin and Carnot. Business has been and continues excellent here.

The Nursery Trade

American Association of Nurserymen.

C. J. Brown, Rochester, N. Y., President; C. M. Hobbs, Bridgeport, Ind., Vice-President; Geo. C. Seagar, Rochester, N. Y. Sec'y. Thirty fifth annual convention to be held at St. Louis, June 1910.

THE Eucalyptus Tree Co. has been incorporated at Los Angeles, Calif., with capital stock $100,000. C. A. Crissey, T. P. Cartwright and C. S. Gibbs are directors.

JACKSON & PERKINS of Newark, N. Y., invited a number of convention visitors to their nursery at Perkinsville and about 100 accepted the invitation. They were met at Creager's Bridge station and taken to the nursery in rigs.

NEW YORK.—The American Nursery Co. was the lowest bidder on the contract for furnishing and delivering stock for the Metropolitan and City hospital districts, Blackwell's Island in the department of charities. The price was $1,620.97.

H. GREENSMITH, of the Cincinnati parks, made a tour last week of the Chicago parks. He expressed himself as surprised and delighted at the extent and arrangement of the principal parks and as much interested in the herbaceous stock and trees in Jackson and Washington parks.

A VOTE by mail is to be taken by the executive committee of the American Association of Nurserymen to decide finally between St. Louis and Denver for next year's convention. Postals have been sent out and votes have to be in by July 15. The heat usual at St. Louis in June was given as one of the reasons for the change.

CHIONONTHUS VIRGINICA is one of the gems of the shrubbery this week in Jackson park, Chicago, its pretty, white, feathery flowers, from which it gets its name of fringe tree, being at their best. The exochorda (pearl bush) is also pretty and calls forth much admiration from visitors to the rose garden in the wooded island, which is now at its best.

Arthur E. Thatcher.

Arthur E. Thatcher, the new assistant to Jackson Dawson at the Arnold Arboretum, was born in 1882. After graduating from the grammar school he took up his life work of gardening. He has always been greatly interested in hardy trees, shrubs and plants and his experience has been largely along these lines. For several years previous to coming to the arboretum, November, 1908, he was in charge of the hardy plant departments at Aldenham House gardens, one of the celebrated places of England, now the estate of the Hon. Vicary Gibbs, a great lover of and authority on hardy trees and shrubs. Here he had considerable experience in handling the earlier Chinese collections of J. H. Wilson, now in the employ of the arboretum. He assisted in the raising of many new varieties of hardy asters (Michaelmas daisies) pentstemons and other herbaceous plants. He has frequently been a judge at the Holland House shows, London, and at other exhibitions.

Retail Nurserymen's Association.

At the meeting of the Retail Nurserymen's Association held during the recent nursery convention at Rochester, N. Y., the following officers were elected:

Chas. J. Brown, Rochester, N. Y., president.

F. H. Stannard, Ottawa, Kans., vice-president.

Guy A. Bryant, Princeton, Ill., secretary and treasurer.

A. E. Thatcher.

Of the Arnold Arboretum.

American Nurserymen's Protective Ass'n.

At the meeting of the American Nurserymen's Protective Association, held during the recent nursery convention at Rochester, N. Y., the following officers were elected:

J. W. Hill, Des Moines, Ia., president.

W. F. Heikes, Huntsville, Ala., vice-president.

Thos. B. Meehan, Dresher, Pa., secretary.

Peter Youngers, Geneva, Neb., treasurer.

Trees and Shrubs in Rochester, N. Y.

The handsome and showy Deutzia Lemoinei, with its numerous white flower clusters, was in full bloom about June 7, and is still, June 12, in good flower. D. paroiflora, a handsome white flowering shrub, opened its first blossoms on June 5. D. gracilis was in full bloom June 10. Boule de Neige is a form of D. gracilis, with compact showy white flower clusters, now in full bloom. Rosea is another variety of D. gracilis with rosy tinted flowers, and Campanulata is still another hybrid form of D. gracilis with bell-shaped pure white flowers, both of which are now in full bloom. D. discolor grandiflora is just now in glorious bloom. The rose tinted or purplish rose blossoms, about one inch in diameter, and the branches loaded with from 10 to 14 racemes, give it a most showy appearance. It never looked so well before with us. D. kalmæflora has umbels of rose-tinted flattish flowers which are very attractive. It is not, however, very hardy, and is now in full bloom. D. Vilmoriniana has pure white flower clusters, somewhat lax, with the individual blossoms one inch in diameter, and prominent yellow stamens, and is now in bloom.

The red flowering horse chestnut, Æsculus carnea (rubicunda) was in full flower June 7. The loose panicles of reddish flowers are remarkably showy. A. Brioti and A. Plantierensis are forms of A. carnea with deeper reddish blossoms, and are very conspicuous and bloom at the same time. A. turbinata, a handsome horse-chestnut from China, with very beautiful deep green leaves and upright panicles of yellowish white flowers, was in full bloom June 7. A. Pavia (Michauxi), with loose panicles of pinkish red flowers, was in full bloom June 7. A. glabra, with clusters of lemon yellow, or greenish yellow flowers was passing out of flower on June 7. A. Whitleyi is a hybrid form with reddish flowers and was also passing out of flower June 7. It forms a remarkably handsome compact tree, 40 feet in height.

The golden chain, Laburnum vulgare, was in full flower on June 5, and the drooping clusters of yellow flowers presented a rich appearance. L. Parksii (Watereri) was beginning to open its flowers June 7. The drooping clusters of yellow blossoms are much longer than in the former. The pea trees (caraganas) have been variously in bloom from June 1 to June 12. The flowers are varying shades of yellow. Amongst some of them are Caragana grandiflora, C. frutescens, C. pygmæa, C. Chamlagu, C. Redowskii, C. altagana and C. spinosa.

The rare and beautiful Chinese fringe (Chionanthus retusus) was in full bloom June 6. The branches are completely enveloped with the pure white fringe-like flowers. The American white fringe C. Virginica is now coming in flower. The snow wreath (Nevinsia Alabamensis) was in full flower June 7, and is now passing out of bloom. Although a southern shrub, it flowers freely here, and with the exception of a little winter killing of the tips of the branches, it grows and does well with us. Jamesia Americana, with clusters of white deutzia-like blossoms, is now coming in bloom.

Berberis vulgaris, B. Sinensis, B. Amurensis, B. Sieboldi, B. aristata, B. Canadensis and B. Poireti, with variously arranged clusters of differently tinted yellow flowers, have been in bloom since June 1. B. diaphana, a new species, with single large solitary blossoms, was in flower June 5, and is now passing out of flower. It colors beautifully in the fall.

The rose acacia (Robinia hispida) has been in bloom since June 6, and the rose-colored flowers are very pleasing. R. Boyntoni, a new species, blossoms at the same time and produces numerous purplish lilac flowers on last year's growth and is quite distinct. R. Neo-Mexicana is just commencing to open its drooping rose colored flower clusters. Rosa spinosissima Altaica opened its first large single white flowers about June 6, and is now in full bloom. R. pendulina (alpina), with dark single pink flowers, is now in bloom. R. rugosa and R. ferox are now coming in flower.

Lonicera Korolkowii, with pinkish white flowers, came in bloom June 4.

L. floribunda, with distinct greyish green foliage and light pink blossoms, came in flower June 4. L. Ruprechtiana, with flowers at first white, afterwards turning yellowish, was in full bloom June 4. L. spinosa (Alberti), with beautiful rosy pink flowers, was beginning to open its blossoms June 5. The red osier dogwood (Cornus stolonifera) and Bailey's dogwood (C. Baileyi) were in bloom June 1. They produce scattering flower clusters throughout the summer. The alternate dogwood (C. alternifolius) was almost in full flower June 5. This is a remarkably beautiful native small tree. C. pubescens, C. sanguinea, C. circinata and C. Kousa are now coming in flower. C. Kousa resembles our native white flowering dogwood very much in its flowers. The tree, or Moutan peonies, have been in full flower since June 1, and are now almost over. The beauty of some of the blossoms on some recently imported forms from Japan was almost indescribable. JOHN DUNBAR.

Errata.—For Spirea Clauda, in last week's issue, page 1087, read S. blanda. The date of flowers opening on Viburnum tomentosum was also obviously wrong. It should have read May 29.—J. D.

Roses in Fall.

Too often the roses in public and private gardens are strictly summer flowering, giving one glorious display around the middle of June and then only a few straggling flowers the rest of the season. It would be a good idea if some of the rose gardens planted years ago to the hybrid perpetual varieties were torn out after the June display, the soil removed and new substituted; or, if this is impractical, giving a thorough dressing of clean loam and manure, cultivating the beds and borders thoroughly and planting to approved varieties in fall. With many of the roses named below the writer has not had personal experience, and it may be that some at least have been tried and found wanting, but a few thoughts on what he has seen may be acceptable.

The bright red Gruss an Teplitz was last season very beautiful in some of the parks in the middle west right up to the time the plants were cut by frost. It flowered well early in the season, stood the heat well and again in fall put forth a bounteous crop of flowers, its lovely color brightening up the surroundings at a time it was most needed. Pegged-down roses are not acceptable to some people, but where beds have to be kept in track there must be some formality, and if their long shoots are turned down, what a wealth of flower is produced all through the autumn by such grand old roses as Mme. Isaac Perrier, Victor Verdier and Reine Marie Henriette. Then the hardy Dijon teas such as Gloire de Dijon, Mme. Berard, Boquet d'Or and Gloire Lyonnaise are only memories with many of us, yet what a grand display they give in early summer, followed by an autumn sprinkling of lovely flowers. How many of us have given the best attention of late to such beautiful old roses as Aimee Vibert, Souvenir de la Malmaison, William Allen Richardson and others that are at their best in the cool days of autumn?

The rugosa roses are a host in themselves, always beautiful from earliest spring to midwinter and perfectly hardy. Including the new colors there is a great variety to be had, and the effect of the satin-like flowers on the soft green leaves is very fine, to say nothing of the handsome fruits that hang on nearly all winter. The beauty of the rambler, noisette and Wichuriana varieties is taken full advantage of indoors, but they are not sufficiently recognized as beautiful outdoor roses. We believe we are correct in saying that the widespread popularity of Crimson Rambler some years ago did harm to this section, for Crimson Rambler, except in very favorable circumstances, is not a satisfactory outdoor rose. In a moist soil and a semi-shady position it is perfect, both foliage and flowers attaining splendid proportions and color. But in the full sun the foliage is pale green and the color burns out of the flowers almost before they are open. There are doubtless many other fine garden roses that might be rescued from the limbo of half-forgotten things, and if other readers of THE FLORIST would give their experience with them it would prove of great interest to many, including RAMBLER.

MACOMB, ILL.—Charles Wettengel enjoys the distinction of being the largest grower of peonies in this section. He has 10,000 plants in 650 varieties.

Evergreen Conifers.

Continuation of a paper read by Samuel C. Moon, Morrisville, Pa., at the convention of the American Nurserymen's Association at Rochester, N. Y., June 9-11. (See last issue, page 1094.)

Pseudotsuga Douglasii, the Douglas fir, is described in Veitch's Coniferae as "not only one of the most interesting but also one of the most valuable trees; its size and its capacity for adapting itself to new surroundings contribute to make it one of the most important inhabitants of western America. Its natural distribution through 32° of latitude, from 55° north, near Lake Tacla in British Columbia, to the tropics of Mexico, make it the most widely distributed of all American trees, excepting perhaps the common juniper; it must possess a constitution that enables it to endure the fierce gales and long winters of the north and the nearly perpetual sunshine of the Mexican cordilleras; to thrive in the rain and fog which sweep almost continually along the Pacific coast range and on the arid mountain slopes of the interior where for months every year rain never falls." This great variation of habitat makes evident the importance of cultivating trees from seed grown under environments calculated to engender rugged constitutions and many of the failures which have attended experiments with these trees may very probably be traced to their having originated from seed gathered in localities differing too greatly from those in which their offspring were transplanted. This tree should be widely distributed and planted extensively wherever large fast growing evergreens are needed.

THE JUNIPERS.

Among the junipers there are a dozen varieties that afford means of adding dainty touches of beauty and artistic effect in nooks and corners and limited spaces which larger growing trees would smother or crowd out of sight. Several varieties of Juniperus communis are useful for such purposes, and first among these I would place the Swedish juniper, J. Suecica and its dwarf form, Suecica nana. I consider this a little hardier than the Irish juniper, not quite as tall and rather more compact in habit than that variety; while the dwarf Swedish forms a low round bush about as tall as broad.

J. pyramidalis, with its lighter green or almost glaucous hue, seems to be a little hardier and more robust in habit than the Irish juniper, which is in more general use than any other variety. For a low mass of bright yellow color, no conifer is more effective than the form of J. communis aurea, known as Douglas' golden juniper. As a cover for mounds, embankments and rocky places the trailing forms of J. sabina, variously known as procumbens, prostrata, repens, tamaracifolia, etc., are all useful.

J. Virginica, better known as red cedar, is a common tree in the eastern states, once looked upon with some disdain. Of late its good qualities are being appreciated and it is being used extensively by landscape planters so that there is a large demand and but a limited supply of good trees. I have in mind a certain little group half way up the slope of a steep and stony hillside, where a large Mazzard cherry tree and a red cedar 30 feet high have grown up in such close proximity that the spreading branches of the cherry have half surrounded the cedar's spire, presenting an unusual but charming effect in lawn adornment, and a valuable object lesson in nature's great scheme of contrast and harmony conspicuously attractive when the cherry is bare of foliage and again in spring when shrouded in its mantle of white blossoms, with the dark evergreen in its loving embrace. Such features as this should be preserved and encouraged wherever possible, not only for the beautification of the nearby home, but for the interest which they add to the general landscape to be enjoyed by the traveling public.

CARE IN HANDLING NEEDED.

All the junipers need careful handling when transplanting, and a few moments of careless exposure of roots has caused the loss of many plants and sometimes has given the plants or the nurseryman a bad name. In Iowa, and probably other central states, red cedar makes a large spreading tree quite distinct from the slender columnar form which is most common in the east, but equally as valuable for some forms of ornamental planting.

In Veitch's Coniferae there are 51 pines described as distinct species, besides a score or more of varietal forms with a range of native habitat from the tropical island of Sumatra to the arctic circle. Probably very few of the present company have ever seen more than one-half of this number, and how many of us can identify one dozen species suitable for ornamental planting in our home neighborhood. I confess that I can not.

I do not know how to add another variety to the old standbys, Austriaca, palustris, excelsa, Strobus and sylvestris for large growing species and Cembra and Mughus for smaller forms. Ponderosa is, I believe, inferior to Austriaca, which it resembles, and the eastern species, densiflora and Thunbergii which the Japanese use so extensively and contort into all sorts of fanciful and grotesque shapes, and which are sometimes recommended here, are of doubtful hardiness in the eastern states and likely to be disappointing.

The variableness of arbor-vitæs, the ease with which they are transplanted and their rapidity of development and, withal, their cheapness, render them very useful plants in a great variety of work and the same applies with equal force to the nearly allied group which we know as Retinospora pisifera and its varieties, including the several plumosas and squarrosas. For hedges, large or small, for massing, for fillers and temporary plants in new plantations, few plants can be more useful than these and with proper attention by occasional shearing, handsome lawn specimens can be developed and maintained, but without occasional shearing the retinosporas are apt to become open and ragged after 10 or 15 years. Although Retinospora obtusa does not transplant quite as easily as R. pisifera it is an excellent tree and R. obtusa nana is one of the choicest small conifers in cultivation. Both of these should be seen much more frequently than they are.

For yellow foliage in creating color effects Geo. Peabody arbor-vitæ, Retinospora pisifera aurea, plumosa aurea, plumosa sulfurea, obtusa nana aurea and filifera aurea are unsurpassed in brilliancy and constancy of color—and if we add Juniperus communis aurea and Taxus baccata aurea we have the cream of the hardy golden conifers.

No list of choice conifers would be complete without mention of that rare relic of the remote past "the sole survivor of a phase of vegetation long since extinct" Sciadopitys verticillata, the umbrella pine of Japan—somewhere spoken of as "the most beautiful of pines." With every tree virtue to its credit and with no demerits, it should occupy a prominent position in every lawn and garden good enough to be worthy of its society. Scarcity is the only drawback to its more general planting. If these remarks suggest to any mind a desire for further development of the house comfortable and the country beautiful by increased planting of evergreen conifers—they will have accomplished their purpose.

LEBANON, ORE.—At a flower show recently held here the judges were C. W. Taylor, of Portland; Mrs. McDonald, of Scio; Mrs. McTimmonds, of Sodaville, G. L. Allen and Mrs. William Quithol of this city.

OMAHA, NEB.—Miss Cassie M. Arnold, who has had charge of J. W. & E. E. Arnold's store at 207 South Sixteenth street, will be married in Trinity cathedral on June 23 to Elmo J. Dowdall of Chicago. They will make their future home in Chicago.

ROSES

A SPECIALTY.

The Dingee & Conard Co.,

WEST GROVE, PA.

Its "The Paper."

ED. AMERICAN FLORIST:—

Enclosed please find my check for one year's subscription to THE FLORIST—the valuable paper for the trade. Having resigned the position of florist and landscape gardener at Carlisle, (Pa.) Indian school. I am now in business again at Miles avenue, Cleveland, O., having taken possession of the place June 1. R. HOFFMAN.

MARSHALLTOWN, IA.—Welter & Co., 1104 West Church street, are planning a substantial improvement to their plant by the addition of a new greenhouse 52x150 feet. Dennis Milan, of Grand Forks, N. D., has entered the old firm of Welter & Kraus. The new firm expects to go into the business on an extensive scale, specializing in raising vegetables during the winter months.

COLORADO SPRINGS, COLO.—The damage by the hailstorm to florists' establishments June 11 has been estimated at $25,000.

Stock You Need Right Now

Phoenix Canariensis

A very desirable palm for the center of vases or for porch decorations. It will stand the sun better than any other palm. Price, for 8-in. tubs, 34 to 36-in. high, 12 to 14 leaves, $2.50 each.

We have a limited stock of these Globe boxwoods. They are a perfectly round ball, with no stem. They are most admirably suited for ledges or porches or any other place where formal effect is desired.

Price, in square mission tubs, $6 each.

GEO. WITTBOLD CO., 1657 Buckingham Place, Chicago.

Order of the White Carnation.

Collector Loeb at New York denied recently that he had broken up the order of the white carnation alleged to exist among the customs inspectors boarding incoming steamships at quarantine. The story sent from Washington was to the effect that certain members of the inspectors' corps were in the habit of wearing at all seasons white carnations. The further allegation was made that regular travelers on steamers arriving at this port recognized inspectors wearing the carnation as "safe" persons to examine baggage. Men so decorated, it was said, could be relied on to be "reasonable" in their appraisements of the goods, thereby imposing the minimum of duties. While Mr. Loeb denied that he had discouraged the wearing of carnations, it is a fact that they have become unpopular suddenly.—New York Commercial.

RICHMOND, IND.—After seven years of effort C. Knopf of the Knopf Floral Co. has completed the construction of a steel railroad tie and fastening and has been granted a patent on his invention by the government. If the invention proves as practical in the test, as he believes it will, there is no reason why it should not almost revolutionize the railway tie conditions. Several financiers and expert railroad men have viewed the device and pronounce it very good in theory, providing it holds up in practical demonstration. Mr. Knopf's attorneys at Chicago are now arranging for a test to be made of the invention.

Killarney Bench Plants

Grafted, 2 Years Old. Price: $50.00 per 1000.

READY FOR IMMEDIATE SHIPMENT.

GERANIUMS

ARE OUR SPECIALTY.

We are preparing to grow Geraniums on quite an extensive scale for the next season; and claim to have the largest and most complete collection in the country, and are making very interesting Special Prices for November and December delivery. Write us about your probable requirement and we will convince you that it is more to your advantage to buy just the kinds you want in the fall than to bother with saving a few stock plants and working up stock yourself.

We have ready for shipment about 250,000 in 2 and 3-in. pots which would make fine stock for fall and Christmas sales. A splendid collection of singles for winter blooming at $2.00 per 100; $18.50 per 1000.

If you want to stock up now we will send you 1000; 50 each of 20 distinct kinds, our selection for $18.50 which we are confident would please you in every way.

Novelties: We now offer one each of 100 varieties, 1907 and 1908 novelties, good stocky plants from 3-in. pots for $10.00. This collection should represent the highest developement in Geraniums to date, as they come from the foremost introducers of the world.

A. F. LONGREN, **Des Plaines, Ill.**

PITTSBURG, PA.—A head of President William H. Taft is the latest floral decoration designed by James Moore, superintendent of the North Side parks. The flower bed, made in the likeness of the chief executive of the United States, is on a hillock in West park, facing Lake Elizabeth, and has attracted considerable attention. The head is made of echeverias, while the background is formed of different varieties of alternanthera. Below the head are the words, "Our President," also in echeverias.

VANDA Cœrulea, fine, well-leaved plants, about 12 in. long	18.00	125.00
About 16 to 18 in. long	24.00	175.00
ONCIDIUM Incurvum, fine, well-leaved plants, with 9 to 12 bulbs	12.00	90.00
DENDROBIUM Formosum Giganteum. This is the finest lot of plants ever arrived here.		
Plants with 6 to 8 bulbs	18.00	125.00
Plants with 9 to 12 bulbs	30.00	200.00
Plants with 13 to 15 bulbs	36.00	275.00
Plants with 16 to 20 bulbs, $5.00 each.		
D. Nobile, plants with 9 to 10 bulbs	12.00	90.00
Plants with 12 to 15 bulbs	18.00	125.00
Plants with 16 to 20 bulbs	24.00	
Plants with 21 to 25 bulbs	36.00	
Large specimens, $5.00, $7.50 and $10.00 each.		

All of the above is in A-1 condition; if anything does not prove to be as here represented, return at once at our expense.

We also have a large stock of established orchids; also materials, such as selected orchid peat, live sphagnum moss and orchid baskets.

If you do not have our Catalogue, write us.

LAGER & HURRELL, Orchid Growers and Importers, **Summit, N. J.**

Mt. Kisco, N.Y.

The exhibition of the Westchester County Horticultural and Agricultural Society opened in the opera house June 18 and was continued Saturday and Sunday. There was a splendid display of roses, strawberries and perennial flowers. H. A. Spavins worked very hard to make the exhibition the success that it was and is entitled to great credit for his decoration of the exhibition hall. There was a particularly noteworthy display in the peony class. The second prize exhibit was remarkable in that 50 varieties of the finest peonies were exhibited, all correctly named, but, unfortunately, the flowers were a little past their best. A collection of pressed native flowers, exhibited by Chas. Hilderbrandt, gardener to Senator Agnew, was of much interest. The premium list was as follows:

Collection of hardy perpetual roses:—C. Whitman (W. Wills, gardener), first; J. Borden Harriman (M. J. O'Brien, gardener) second.

Hybrid tea roses:—Chas. Whitman, first; Moses Taylor, Esq. (R. W. Beatty, gardener), second; Hon. Seth Low (Hugh Birch, gardener), third.

Vase of 12 roses in variety:—J. D. Laying (David Francis, gardener), first.

Vase of 12 roses white:—Col. Jay (A. L. Marshall, gardener), first; Hon. Seth Low, second.

Vase of 12 crimson roses:—Moses Taylor, first; Col. Jay, second.

Collection of Peonies:—W. Cowdin (Matthew Rall, gardener), first; C. Whitman, second.

Collection of hardy perennials:—J. Borden Harriman, first; C. Whitman, second.

The society is all alive and will hold another exhibition in the autumn in addition to the chrysanthemum show. The work of the various members is increasing the interest of a great many amateurs in that locality. The judges, who gave complete satisfaction, were Harry A. Bunyard of New York and Robt. Angus of Tarrytown.

BRATTLEBORO, VT.—R. H. Messenger, who had charge of the Bradley greenhouses, has severed his connections here and has accepted a position as gardener to C. W. Dunham.

Plant Poisons.

Among the most remarkable of the occasional constituents of plants are those substances known to chemists as cyanogenetic glucosides. These glucosides are complex substances, which split up readily into a sugar (glucose) and other compounds, among which is the highly poisonous prussic acid. Inasmuch as such glucosides occur in various fodder plants, it is not surprising that instances of poisoning occur occasionally among cattle which have fed upon sorghum, millet, etc. Within the past few years three new cyanogenetic glucosides have been isolated from plant tissues, viz., sambunigrin from the leaves of the common elder (Sambucus nigra); prulaurasin, from the leaves of the cherry-laurel (Prunus laurocerasus), and amygdonitrile glucoside from the young twigs of Prunus Padus, and more recently from the bark of the wild cherry (Prunus serotina). The last-mentioned glucoside is peculiarly interesting, inasmuch as it is a constituent of amygdalin, the active principle of bitter almonds, and was, indeed, prepared from amygdalin in the laboratory in 1895, 12 years before its discovery as a natural product of plants. The work of the chemists in isolating and examining the constituents of plants must lead ultimately to the goal so much desired of botanists, the discovery of the chemical course of events whereby the inorganic nitrogen taken in by the plant in the form of nitrates is built up into organic nitrogen.—Gardeners' Chronicle.

PEKIN, ILL.—Geo. A. Kuhl sent a magnificent bouquet of La France roses to the Methodist church on the occasion of the recent revival services.

FREEPORT, ILL.—The Freeport Floral Co. has been incorporated with capital stock $25,000, divided into 250 shares of $100 each, to do a general greenhouse, nursery, seed and truck business. The following are the officers: Dr. D. C. L. Mease, president; W. N. Conkrite, vice-president; Louis Bauscher, secretary and general manager. New buildings are under way.

JUNE TRADE GOOD.

The sale of bedding plants is about over, although some orders from out of town are still coming in; usually these late orders are of the larger size and often the florist is left to use his own judgment as to variety and price, and this often gives him an opportunity of clearing up some surplus left over. Bedding plants this year sold very well; there was not more grown than last year, but they probably sold out cleaner than last year. There was an attempt at the beginning to undersell last year's prices, but it soon was realized that stock would not last long even at the old prices. The retailers are doing a good business with the June brides; a large number of decorations have been ordered and there are good prospects of many more. There is hardly a wedding nowadays where there are not some sort of flowers used or a few plants for decoration.

NOTES.

The annual picnic of the Gardeners and Florists' Club will be held at the grounds of the MacDonald college of St. Anne de Bellevue. The management of the college has assured the club that their extensive grounds are open to it and that the members are quite welcome. This will give a number of members the opportunity of viewing that institution.

A hailstorm June 5 did considerable damage to Joseph Bennett's greenhouses at Lachine, breaking over 1,500 squares of glass, doing damage estimated at $600.

Tim Martel, landscape gardener, will double his working force in order to execute rapidly the large amount of work on hand.

Deguire Bros., vegetable growers under glass, Cotes des Neiges, will build three large houses for vegetables this summer.

Miss Eva McKenna, daughter of James McKenna, will be married on Tuesday next.

Hall & Robinson, Outremont, will build a small house for violets this season. LUCK.

Madison, N. J.

The June meeting of the Morris County Gardeners' and Florists' Society was devoted to revising the schedule for the annual flower show which is to be held in the assembly rooms October 27 and 28. Some special prizes are yet to be placed which will delay the schedule a few days, but there is plenty of time, there being no meetings in July or August. The next meeting will be in September, when the schedule will be ready for distribution. Robt. D. Foote of Morristown, a staunch friend of the society, offers a special prize of $25 for the best vase of carnations, any variety (undisseminated varieties barred), 25 flowers, open to all. This ought to bring out a lot of competition. Another friend offers $25 for three vases of chrysanthemums, six flowers in each. Varieties, O. H. Kahn, Merza and Wm. Duckham. Dr. D. H. McAlpine of Morris Plains offers a prize of $25, which will be in a special class. The doctor is one of our most enthusiastic supporters. A silver cup, value $25, from another source, is yet to be placed in a special class.

These are only a few of the many prizes and are enough to indicate that the interest in the fourteenth annual show is as keen, if not more so, than any of its predecessors. C. H. Totty was elected a delegate to attend the initial sweet pea convention to be held in New York. A very fine display of peonies and gladioli from Florham Farms was a feature of the evening. We were sorry to miss Arthur Herrington from our final meeting. He is confined to his home. His ailment, though not considered dangerous, is painful. Later reports say that he is improving rapidly. E. R.

PATCHOGUE, N. Y.—Geo. Terry and Geo. Biggs have entered into partnership and will go into carnation growing. They are building greenhouses for this purpose.

BAYONNE, N. J.—Fire destroyed a good deal of the handsome shrubbery at the home of former City Treasurer Nathaniel Trask, on Broadway, June 14. The fire was caused by the gardener throwing a lighted match into a pile of rubbish. For a time it looked as if the flames would spread to the house.

Formerly Garfield Park Flower Co.,

An Indian Flower Show.

The first agri-horticultural show ever held in Mozufferpore took place on February 5-6 in the grounds and Durbar hall of Joran Chuptra, kindly placed at the disposal of the committee by the Maharaja of Darbhanga. The flowers, fruit, and vegetables were arranged in the large Durbar hall, which presented a most attractive appearance, the sides of the room being banked with the exhibits of pot plants, while the center was given over to decorated tables and cut flowers. The first prize for table decoration had a pretty arrangement of coreopsis in silver vases. The second had a dainty-looking table of pink poppies, while the third had cosmos and sweet sultans. There were also groups of foliage and flowering plants, crotons, ferns, etc. According to an Indian newspaper there were also mammoth vegetables, particularly cauliflowers and celery, while potatoes, carrots, tomatoes, mushrooms and watercress were also exhibited.

ELGIN, ILL.—At a recent fire at their home, the daughters of Geo. Souster, Miss Elizabeth and Miss Anna, heroically entered the barn where their horses were and, at great danger to themselves, rescued the frightened animals by throwing blankets over their heads and leading them out. For a long time the horses were wild with fright and would not budge. One of the animals was a pony that had been a pet of the girls since childhood. Fortunately they were not seriously injured, Miss Elizabeth only being slightly burned.

Par Grisy-Suisnes. (Seine et Marne), FRANCE.

ALL Nurserymen, Seedsmen and Florists wishing to do business with Europe should send for the

"Horticultural Advertiser"

This is the British Trade Paper, being read weekly by all the horticultural traders; it is also taken by over 1000 of the best continental houses.

Annual subscription, to cover cost of postage, 75c.

As the H. A. is a purely **trade** medium, applicants should, with the subscription, send a copy of their catalog or other evidence that they belong to the nursery or seed trade.

Money orders payable at Lowdham, Notts.

Address **Editors of "H. A."**

BOOKS FOR FLORISTS

The following books should be in every florist's and gardener's library. A good book on any subject in which you are specially interested is worth years of experience and should be kept convenient for reference at all times.

Send prices quoted and we send the books.

THE AMERICAN CARNATION (C. W. Ward).—A complete treatment of all the most modern methods of cultivating this most important flower. Illustrated. $3.50.

THE HORTICULTURISTS' RULE-BOOK (L. H. Bailey).—Contains information valuable to all those engaged in any branch of horticulture. Illustrated. 312 pages. 75 cents.

MANUAL OF THE TREES OF NORTH AMERICA (Sargent).—The most complete and authentic work on the subject. The pages number 826, with over 600 illustrations. $6.00.

GREENHOUSE CONSTRUCTION (Taft).—It tells the whole story about how to build and heat a greenhouse, be it large or small, and that, too, in a plain, easily understood, practical way. It has 118 illustrations. $1.50.

THE ROSE.—Its cultivation, varieties, etc. (H. B. Ellwanger).—A complete guide of the cultivation of the rose, together with the classification of all the leading varieties. $1.25.

HOW TO MAKE MONEY GROWING VIOLETS (Saltford).—This is by a practical grower who has made a success of the business. No grower of violets can afford to be without it. 25 cents.

HEDGES, WINDBREAKS, ETC. (Powell).—A treatise on the planting, growth and management of hedge plants for country and suburban homes. A volume of 140 pages, with twenty-two illustrations. 50 cents.

GINSENG (Kains).—At the present time, when so much interest is taken in ginseng, it will be interesting to peruse this volume, which tells all about the plant in a way that all may understand. The 144 pages are freely illustrated. 50 cents.

YARD AND GARDEN (Baker). An excellent book treating on the method of making home gardens attractive. The author covers a wide range of subjects in quite an able manner and the book is full of interest for the amateur gardener; 140 illustrations, 420 pages, $2.

SUCCESS IN MARKET GARDENING (Rawson).—Written by one of the most prominent and successful market gardeners in the country, and who has the large t glasshouses for forcing vegetables for market in America. Outdoor and indoor crops are treated. Illustrated, $1.00.

CELERY CULTURE (Vaughan).—The important subject of celery culture is thoroughly covered in this illustrated pamphlet of 59 pages. The florist raising young plants of celery and those who grow the plants to maturity will alike find it valuable. 50 cents.

THE GOLDFISH (Mulertt).—A number of florists find goldfish an attractive and paying addition to their business. The best advice is given in every department of the subject, including construction and care of the parlor aquarium, in this volume of 160 pages, handsomely illustrated. $2.00.

HOW TO LAY OUT SUBURBAN HOMES (Kellaway).—Contains many useful hints and practical plans as to improving and laying out suburban homes and grounds. There are 112 pages, 38 half-tone illustrations and 15 plans and maps. $2.

LANDSCAPE GARDENING (Maynard).—The development of landscape art within the past few years compels the wide awake florist to keep posted on this branch of the business. The many suggestions of this book will be found helpful every business day. It contains 338 pages, 165 illustrations. $1.50.

DAFFODILS, NARCISSUS AND HOW TO GROW THEM (A. M. Kirby).—Contains all that is really worth knowing about these most popular of spring bulbs, written from the standpoint of American conditions. Illustrated, 233 pages; postpaid, $1.21.

AMERICAN FLORIST CO. 324 Dearborn St., Chicago.

with Lemon Oil Insecticide, adding 30 parts water. No odor, no poison—advantages over Fish Oil or Tobacco products Used everywhere If not sold by your seedsman, write WEATHERBY BROS. Baltimore, Md., for full information

Washington.

COMMENCEMENT WORK.

Orders for bouquets and baskets are rapidly being booked for the final school closing exercises. There is also quite a demand for funeral work, owing to the deaths of a number of prominent persons. Stock is not very plentiful and it is expected that the past week of sunshine will help to recuperate the outdoor stock, which has been damaged owing to the long spell of cloudy and wet weather. With the contemplated departure in the near future of the president and family, and the closing of congress, there will be but little to do. Schedules for vacations are being prepared at the various stores.

NOTES.

The I street window of Geo. C. Shaffer's store is a great source of attraction. A large pond eight feet square is filled with aquatic plants; to the rear from a high bank of rocks a wide stream of water falls, and beside the bank a rustic house, which is connected with a rustic bridge leading out into the pond to a rustic pavilion. A number of various colored miniature incandescent lights illuminate the railing around the house, the bridge and the pavilion; swimming about the pond are gold fish and turtles; about a dozen ducks make merry in the water, night. G. S.

THE NEW

Chicago Sprayer

This Sprayer is made of aluminum and with two brass plates, one being fine and the other coarse. They can be easily removed, quickly cleaned, and this sprayer will never wear out.

Spraying face 4 1-2 inches wide; nozzle 6 1-2 inches long, 3-4 inch pipe connection, $2.50 each.

E. H. HUNT, Established 1878. **76-78 Wabash Avenue, CHICAGO...**

St. Louis.

A GOOD WEEK.

Quite a change in the market and a very welcome one at that. The glut of last week is a thing of the past and now a more conservative market is with us. Carnations are now quoted at 1½ and 2 cents, and roses, especially the better grades, are scarce. Quite a demand last week was caused by the closing exercises of the public schools, the universities and colleges, and this week will wind them up; then the regular summer business will have started. Sweet peas have been in demand and prices have had an upward tendency, especially where the quality has been fair. Ferns are selling well, fancies are starting to come in and are eagerly sought after. Asparagus Sprengeri and A. plumosus are selling well.

GREENHOUSE BUILDING.

Fred Ude of Kirkwood is putting up four new greenhouses 16x100 feet; C. Meyer, one 28x120 feet for carnations; Philip Goebel, one greenhouse 20x100 feet for carnations; Gus Hartmann, one 17x100 feet for violets; Edwards, four houses 18x100 feet for violets and carnations; W. M. Meyer, one 18x100 feet for violets, and W. R. Greb is finishing up his greenhouse 18x70 feet.

NOTES.

The programme to be carried out by the Florists' Club for the annual picnic is fast getting in shape. Henry Ostertag has been very busy getting copy from prominent advertisers in all lines of business, and quite a neat little sum will be netted to cover expenses of special prizes to be given for sporting events.

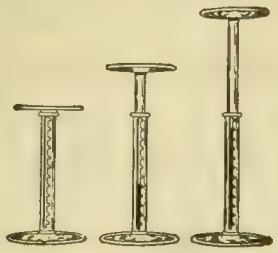
C. J. Schlueter, brother of Mrs. Kate Schlueter (the North St. Louis lady florist), was married June 16 to Miss Nancy Dean; a home wedding at the residence of the bride, 4458 Greer avenue.

F. C. Weber, wife and daughter, together with Theodore Miller, wife and daughter, will leave for Germany next week.

Wm. Smith Floral Co. is handling some extra fine sweet peas.

Adolph Brix' daughter was married last week. W. F.

PARIS, FRANCE.—At a fete given by the Aero club five balloons ascended gaily decorated with the flowers for which they were named—Cornflower, Carnation, Peony, Daisy and Rose, and these flowers were showered upon the spectators as the ascents were made, making a very pretty spectacle.



The Moore-Livingston Plant Stands.

Sterling Iron Reservoir Vases

Chairs, Settees, Hitching Posts, Etc.

Complete Catalogue and Discounts Upon Request.

The Sterling Emery Wheel Mfg. Co., TIFFIN, OHIO, U. S. A.

New Orleans.

THE SEASON OVER.

The season is now closed for the summer as every one who can has gone, or is preparing to leave, for cooler climes. The growers are busy preparing their chrysanthemums for the fall trade, and if the conditions of the last two months continue we will have an immense crop for All Saints day (November 1). The only cut flower orders now are for wedding or funeral work.

SOCIETY NOTES.

The Society of Southern Florists had a meeting recently at which C. R. Panter presided in the absence of President Jas. Newsham. Paul Abele, secretary, and about 15 members were present. It was resolved that for want of interest and encouragement from the members, about 70 strong, and not having met in two years, it was best to disband and give a banquet in conjunction with the Horticultural Society on July 15 at Milneburg.

The Horticultural Society held its regular monthly meeting on June 17, and after routine business it was decided that instead of the regular annual outing the election of officers take place next month at Milneburg on Lake Ponchartrain. A banquet will be held after the meeting.

SCOLLAY'S

Plant Sprinkler Putty Bulb.

VAUGHAN'S SEED STORE, CHICAGO NEW YORK

NOTES.

Richard Eichling, grower for U. J. Virgin, has some fine asters in bloom for this season of the year.

J. A. Schindler & Co. have gone into the hands of a receiver.

John Rink has the Union Station park in beautiful condition.

Robt. Reinecke has a fine stock of fish tail ferns.

B. M. Wicher & Co. report business quite fair.

RANDOLPH & McCLEMENTS, Successors to Chas. T. Siebert. Baum & Beatty Sts., Pittsburg

Louisiana, Mo.

Stark Bros. Nurseries & Orchards Co. recently received the following letter which is self explanatory:

Washington, D. C.

I see that Stark's Nursery presented every convict in the penitentiary with a nice bouquet the other day. I most heartily congratulate you on this humanitarian act. When I was in the Missouri legislature 20 years ago the laws of Missouri did not contain a single reformatory idea. I tried to introduce some which have since been adopted, but I was ahead of my time, so that I am glad when I see that anybody does anything to ameliorate the condition of a most unfortunate set of people. In at least two-thirds of the cases they are criminals through misfortune rather than anything approximating total hereditary depravity. CHAMP CLARK.

MANETTE, WASH.—J. E. Baker is doing a large and increasing business, largely in outdoor flowers, both locally and wholesale to Tacoma and Seattle. Mr. Baker is greatly interested in improving the strains of the plants he grows and would like to have other interested persons communicate with him.

Our Pastimes.

Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.

Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

The Hughes Ball Team.

The team that is representing Hughes the Chicago florist this year, has so far an unbroken string of victories to its credit. Meeting the strong Lombard team June 13 it snowed them under to the tune of 11 to 1. They followed this up June 19 by applying a

Hughes' Baseball Team, Chicago

coat of whitewash to the Crawfords, beating them 8-0, and on Sunday swamped La Grange 8-2. The boys have one of the stronget amateur batteries in town, and the scores they have rolled up intimate that they are some hitters.

At Chicago.

The two leaders in the competitive bowling that is now going on at Bensinger's alleys to select a team to represent the Florists' Club at the S. A. F. convention at Cincinnati in August failed to put in an appearance on Friday night, Henry Kruchten being kept away through business and John Zech being ill, hence their averages remain the same as last week. A. Zech, Bergman and Asmus improved their standing, while the balance of the pin getters fell off in their work and will have to do some tall bowling the next few weeks if they expect to get in the charmed circle. The rules specify that 21 games must be rolled in this competition and as there is only a possible 30 games to be rolled it behooves every one to make it a point to be regular in their attendance. The 10 high average men are: H. Kruchten, 193 1-3; J. Zech, 182; A. Zech, 171 1-9; G. Asmus, 170 4-6; V. Bergman, 165 6-9; Lorenzen, 164 1-3; W. Wolf, 161 1-3; E. Schultz, 157 2-3; F. Pasternik, 154 8-9; J. Degnan, 151. The scores of Friday night's games follow:

Craig	129	105	155
A. Zech	164	189	161
J. Michaelson	155	169	166
J. Kruchten	119	159	141
Dressel	142	113	132
Totals	709	735	755
E. Farley	129	106	120
Lorenzen	176	155	162
V. Bergman	221	145	137
J. Degnan	143	147	120
F. Johnson	142	118	128
Totals	811	671	667
E. Winterson	151	181	140
F. Ayers	133	138	174
F. Kraus	122	132	118
T. Yarnall	136	140	93
T. Vogel	106	83	129
Totals	648	674	654
O. Goerisch	116	158	149
G. Asmus	187	171	177

Eckhart	92	80	104
Totals	679	744	699

At Washington.

BOWLING.

The following scores were made at the Rathskellar alleys Wednesday evening:

Cooke	128	210	183
Shaffer	154	166	149
Hamner	186	159	223
McLennon	199	166	215
Simmonds	242	188	171
Caldwell	152	176	187
Dalglish	151	158	150

G. S.

Baltimore.

STAGNATION IN TRADE.

Trade the past week has been down to the lowest depths of stagnation, with practically no movement to absorb the excessive products which are put on the market. The June weddings are things of the past. Commencements are over and the healthfulness of the season is appalling to the warring undertaker, so that even funeral flowers are no longer in request. Carnations were a glut; the indisposition to pull out the plants whilst no filling in can be done from the wetness of the soil is general. Roses are almost equally plentiful, and the mildew is general. Some few sweet peas of fine quality are coming in, but the bulk are water-soaked and miserable. There has been some intermitting fine weather the past day or two, but several storms last week were of great violence. The rainfall was enormous and came down with such force as to compact and harden the soil and prostrate much of the growing stock. There was not much wind on the west side but across the river there was a small tornado. John M. Rider of Brooklyn lost a row of ventilators and many tree limbs.

One of the best known street vendors of this city, Charles Gardner, died Monday in one of our hospitals of tuberculosis. He had been longer in business here than any of his calling in the cut flower line, and had the nerve at times to take over pretty big lots of material from the Florists' Exchange.

Lehr Bros. of Anne Arundel are putting up two Lord & Burham houses for carnations, each 30x250 feet. They have pulled out three old cast iron boilers and are installing a return-tubular boiler of 100 h. p.

B. G. Merritt of Grange is building two houses 32x125 feet for carnations.

The Standard Steam Trap

Has established a record far above that that of any other trap for Florists; being very simple, durable and easily taken care of.

Catalogues of the Trap, Duplex Gutter, and Standard Ventilating Machinery, mailed free upon application.

E. HIPPARD, Youngstown, O.

Dimorphotheca Aurantiaca.

Closer acquaintance with this plant deepens the conviction that it will become a most popular plant. Its beauty goes without question, but to the gardener its robust, free-growing qualities will most directly appeal. It germinates freely indoors in early spring, and is never capricious about damping off, says a correspondent of the Gardeners' Magazine. From seed box to pot it transplants with perfect ease, and it is never in two minds as to growing. I planted my first batch outdoors in April (before Easter), at the foot of a south wall, and on May 5, the first flowers were fully expanded, imparting a rich color to the spring garden, and a most welcome addition to the plants for adorning gardens in the open-air during summer. It is also a beautiful subject for growing in pots in the greenhouse, and to those whose facilities are limited in this direction I can recommend it as one of the easiest plants to flower. Seed sown at intervals from the beginning of February will give plants to flower from April throughout summer.

Boilers, Tubes, Flues, Etc., at Wrecking Prices!

If you intend to increase the size and capacity o your greenhouse or make any repairs for the coming winter, be sure and write for our low estimate on your requirements before placing your order We have just purchased at a forced sale **50,000,000 ft. Brand New Lumber and Timbers,** which we offer at prices lower than your local dealer can supply the same grade.

Estimates Furnished Free, Our Greenhouse Engineer will furnish you with any estimate on anything you may require in the Boiler, Heating Material or Building line. **Write for price list on Iron Pipe.**

7-500 horse power Babcock & Wilcox water tube boilers with B. & W. chain grates, about 5 years old: 160 lbs pressure. Also complete coal and ash handling apparatus capable of of taking care of these boilers.

4-250 horse power **Heibe** water tube boilers with Oliver patent grates: 100 lbs. pressure.

1-125 horse power **Morrison** corrugated furnace, internally fired boiler, 125 lbs. pressure.

1-48x21 locomotive fire box boiler. 60 horse power, 100 lbs. pressure.

24-Horizontal tubular boilers, triple riveted: ½-in. shell, ⅝ heads; with Murphy Furnace and stokers on all boilers: also coal and ash handling apparatus for these boilers.

Greenhouse Boilers!

A complete line of locomotive, fire box boilers. Kroeschell Greenhouse boilers, Return tubular boilers, Cast Iron Sectional boilers, etc., some are rebuilt, some brand new, but all are in first-class condition for further service.

1—150 horse power fire box boiler.

Good for 60 lbs. pressure. Free from patches, bulges or blisters.

Complete with all fittings.

We want to move this boiler quick and quote a special price of..... **$500.**

Boiler Flues! Fitted with special thread and couplings. Can be used same as threaded pipe and fitted with calked joint greenhouse fittings at the end of the run. These flues have the same strength as wrought iron pipe and are offered at about half the price. Any size desired.

6-72x20 horizontal tubular boilers, quadruple riveted: 50 4½-in. tubes: 110 lbs. pressure.

4-72x18 Horizontal tubular boilers, 100 lbs. pressure.

4-72x16 Horizontal tubular boilers, 95 lbs. pressure.

2-66x16 Horizontal tubular boilers, triple riveted, **Butt** strapped, 140 lbs. pressure.

8-60x16 Horizontal tubular boilers, 100 lbs. pressure.

2-54x16 Horizontal tubular boilers, triple riveted, butt strapped, 125 lbs. pressure.

2-48x14 Horizontal return tubular boilers, butt strapped, double riveted; 125 lbs. pressure.

HOT BED SASH at EXTRAORDINARY LOW PRICES.

BOILER TUBES. 20 carloads of 4 in. Boiler tubes in perfect condition. They are just the thing for heating purposes or for retubing boilers Other sizes can be furnished at specially low prices. Write for complete list.

A GOOD SEASON.

Business in this city has been the best ever for this season of the year, the larger number of weddings and the many social functions lately taking place have called for decorations, many of them out of the ordinary and have been pretty fairly divided amongst the different florists. Stock of all kinds has been fairly plentiful but with the warmer weather and replanting of houses the crop of roses is much smaller and quality not so good. American Beauty is very scarce and at times it is impossible to fill orders. Carnations are still plentiful and good and lily of the valley of superior quality is abundant. This city is making rapid strides in the production of orchids; a few years ago it was often impossible to get enough locally to fill an order for a dozen blooms, now they can be had in lots of 500 easily and at moderate prices.

NOTES.

Grobba & Wandrey find ready sale for a large quantity of centaurea; this firm is ever ready to take up something out of the ordinary and in this have struck it right. The cattleyas are at present fine, many plants showing from 12 to 34 blooms.

Miller & Sons are quickly repairing the recent damage caused to their plant by the boiler explosion and all hands are kept busy glazing. They have had a good crop of gladioli both large and small.

Peonies are now the dominant flower in window decoration. Frank Duffert has them in quantities as he grows a large number of the early varieties.

R. Jennings of Brampton is off on a tour to the old country. Chas. Tidy also has his passage booked for next month.

Our Supplements.

Subscribers should see that they get copies of the fine supplementary illustrations showing high grade design and decorative work. These fine supplements appear with each issue and should be carefully preserved, as they mean much to the retail florists in dealing with their customers, illustrating as they do the various kinds of work that the everyday florist is called upon to perform.

The papers in which the supplements appear should be likewise preserved, as they contain much valuable data with regard to these special illustrations. Subscribers should see that they get every issue as otherwise they may miss some of this high grade work.

SUGGESTIONS FOR PLANT GROWERS.

Winter Flowering Geraniums.

Where there are strong and healthy little plants in 2-inch pots these, if well rooted, should be repotted into 5-inch and be stood in a light cool frame or plant protector. The soil in the pots must be made very firm or growth will be too rapid. What is needed is a short-jointed, firm growth that will be solid and well ripened by autumn, such growth always flowering more freely than that produced in loose rich soil. Shading is a point that needs attention according to individual circumstances. In very few places in this country can it be done without entirely, but with these sunloving plants the less used the better as long as the foliage does not suffer. Water moderately until the plants are again established in the pots and damp the plants overhead daily. Pot the late rooted cuttings into 2-inch, to be shifted as noted, for the earlier plants when they are ready. It is getting late to root others for winter flowering, but if a successful batch of cuttings can be rooted now they will be in good shape for early spring flowering.

Hardwooded Plants.

The usual custom of placing all hardwooded plants outdoors for the summer, placing them under the shade of adjacent trees that are sometimes insect infested and where the plants do not get fresh air in nearly sufficient amounts, is not always the best that could happen. Growers who practice this look on the summer as a troublesome period in the life of their azaleas, genistas, heaths, boronias and similar stock that has to be bridged over somehow and lumping them all together with oleanders, orange trees and other stock equally misused seems the easiest way out of it. Heaths and boronias treated this way never flower satisfactorily as the wood is soft and immature. They should be plunged outside in the sun with their roots and pots safe from the scorching heat in plunging material kept moist by occasionally spraying and keeping the top loose. During the very hottest part of the summer these plants can be kept right this way, though a light shade from the midday sun at such times is an advantage. Azaleas need more shade than heaths and as the flower buds are already set in the growth the ripening process need not be so severe. The tree shade may do all right for them provided the position is one in which the air can circulate freely among them. Rhododendrons may be similarly treated.

Begonia Gloire de Lorraine.

Growers of Begonia Gloire de Lorraine must not look for a very vigorous growth in their plants for another two months or so. The most critical time in the culture of these plants is to come, for the heat of summer does not suit them. The aim now must be to keep them gently moving and keep the soil in the small pots sweet by careful watering and occasional stirring of the surface. When for any reason the stock is short small plants may be purchased now at a fairly cheap rate and it is better to buy them and grow them on than to have to buy later. Where the leaf cuttings were rooted in the pots these will probably need a shift and in any case if the soil is in bad condition it will be well to renew this, giving a sandy soil with a good proportion of leaf mould. But we do not advise pulling them about at the roots as long as they are healthy and holding their own. Better wait until the middle of August and then give a shift into the flowering pots. Still nothing approaching starvation can be allowed and it is better to give a small shift than to check the plants in any way. The same treatment is necessary for the white form and the several improved varieties of this begonia.

Calceolarias.

The most frequent cause of failure with herbaceous calceolarias is want of attention in the earliest stages. Too early sowing, with the consequence that the young plants are neglected sometimes accounts for this and it is much better to wait until the plants can have proper attention from the start. If good plants are needed, however, the sowing must not be delayed much after the first week in July. Prepare the

pans carefully using sterilized soil consisting of leaf mold and loam with sufficient sand to keep it in good condition mechanically. Place the pans in a cool shady corner of a frame where the atmosphere will be regularly moist and only water at the surface sufficiently to keep the soil in good condition. A little moss placed over sheets of brown paper cut to fit the pans is a great help to keeping the soil moist without watering at the surface. But this must be watched carefully and removed as the seed germinates or the seedlings will damp off. The ideal position for the young seedlings both in the seed pans and after they are transplanted is a corner of a frame where the sun does not reach and which in consequence, has not to be shaded. If such an one is not to be had shading must, of course, be given as the calceolaria delights in a cool moist and airy position all through its career and will not thrive without it.

The Cold Frame in Summer.

Not enough attention is paid to the cold frame; plant growers will find it one of the most useful assets of their business. Not only is the frame used for small seedling stock but there are many plants of larger size that cannot be placed outdoors in summer yet thrive in the slight protection given by the frame. When it is customary to use the whole or any part of the houses for other purposes during the summer months then frames are absolutely necessary and they are a most useful adjunct to any greenhouse establishment, large or small. The important part of it all is that so many growers either do not know how to manage cold frames or they seem to think them of lesser importance and the plants in them are neglected. The time is rapidly approaching when there will be hundreds of young seedling stock of such things as cinerarias, primulas, calceolarias and even cyclamens to take care of. A cold frame with shaded lights, these being raised a few inches from the frame by tipping on the dividing bars and leaving air on the top of one and the bottom of the next, is the finest of all positions for such stock. The temperature keeps even and, owing to the proximity of the soil and the glass, does not dry out. For the next two months we may expect weather that renders the minimum attention necessary to such frames. The best time to give attention to the watering is some couple of hours after the air has been increased in the morning and the night moisture dried up, and before the sun has attained full power. On dull hot days the lights may be run off and the plants exposed to full air, such days being a great aid to the plant grower in summer. We can confidently advise anyone who has not these useful aids to plant growing to put them in at once.

DANBURY, CONN.—Cornell & Co. have closed their New Milford branch.

THE contract for decorating the steamers North Land and North West, of the Northern Steamship Co., has again been awarded to W. J. Palmer & Son, Buffalo, N. Y. This makes the third season this well known firm has been selected for the work.

THE RETAIL TRADE

THE pretty basket herewith illustrated is one of the little effective bits of work carried out by W. J. Smyth of Thirty-first street and Michigan avenue. We are glad to be able to report that Mr. Smyth is progressing favorably after his recent severe accident under circumstances already noted in these columns.

Flowers in the Chicago Stores.

Whatever may be said about the quality of the flowers to be had in Chicago, there is no question about the variety, for this is about as large

Pretty Basket by Wm. J. Smyth, Chicago.

Primula Obconica and Pteris.

as it could be. Taking the leading stocks, the peonies have been simply overriding everything else for the past few weeks, but the torrential rains of June 23 to 25 finished off a lot of the older blooms and those now arriving are of better quality than before. Roses are poor in almost every instance. Killarney is fair, but Bride and Bridesmaid, Richmond and others are down to the summer standard or a little below. The new American Beauty now coming in is the salvation of the situation regarding roses, while a few good Kaiserins are also on show, but not as many as usual at this time. Whether they are in the market or not they certainly are not shown in the stores.

Carnations are decidedly inferior in the majority of cases, yet in the better class stores one sees a few vases of fine, well-colored stock. Orchids are not overplentiful, though there are plenty of cattleyas apparently. Good C. gigas in the lighter forms seem to predominate, while there are still some good C. Mossiæ shown and C. Gaskelliana is coming in. Other orchids are seen, but not to any great extent. Sweet peas are not as good as they were. The outdoor flowers do not seem as good as usual, while the splendid quality of the indoor product seen some time ago is tailing off. The season has not been particularly hot and with a few sunny days the outdoor crop should certainly be better.

But if sweet peas are poor other outdoor stocks are excellent. In the ice box in a down-town store late last week we noted beautiful flowers of coreopsis and gaillardias, splendid in color and substance, with fine stems, very useful flowers. Daisies are fair. We have seen good Shastas, fine field daisies and good yellow marguerites, but these seem to vary from day to day, while other stocks, such as candytuft, lily of the valley, stocks, forget-me-nots, snapdragons and cornflowers all help in the display. Water lilies are fine and a natural touch is given to several windows by arranging small ponds with these and young ducks, a cool-looking and attractive feature. Trade is not good and in many cases retailers and their assistants are getting the vacation idea in their head. But we hardly expect a rushing business now and retailers are not worrying over it.

Appropriate Floral Tribute.

The somewhat unusual floral piece herewith illustrated was made by the Gude Bros. Co., Washington, D. C.: "Good Night, Sweet Dreams," was a favorite selection, composed by the blind Professor Bishop, a noted composer of music. The stephanotis so freely used in this piece is reminiscent of old times.

Wreath of Callas and Carnations.

SEE SUPPLEMENT WITH THIS ISSUE.

Callas are bold looking, handsome flowers that are always popular in floral designs of any kind, especially in wreaths or crosses. Used alone they have a dead looking effect that is not satisfactory but in conjunction with other and lighter flowers they are excellent. As in using most large flowers a natural pose is best, but callas may be used in a variety of positions and are pretty in any of them. Buried in other flowers and greenery they still retain their individuality and are always singled out for praise, while standing out on the erect stiff stems they are very graceful and effective.

The plan of including a knot of violets, lily of the valley or some other small flower is a good one. It removes any possible chance of flatness or stiffness and has a charming effect when carried out well. The continuous wreath is not perhaps as popular as it once was, a broken wreath or a solid wreath of one flower overlaid with other and lighter flowers for contrast being more general. But either way is good if properly carried out, much depending upon the skill and taste of the artist. Selection of suitable ribbon for wreaths, using colors that do not clash with that of the flowers, is also a point needing care.

KEY WEST, FLA.—A new and desirable industry which has been recently established in this city is a floral depot, which is located at the corner of Margaret and Southard streets. This new enterprise is in charge of Shaw, Scott & Paschall, and there is every reason to believe that it will be successful. The depot will be supplied with fresh cut flowers, shipped from Cuba.

The Development of the Retail Trade.

A paper read by Frank Danzer at the Detroit Florists' Club, June 21, 1909.

During the past winter we have had occasion to listen to some very interesting papers which spoke of local floricultural conditions some 30 years ago. For me to speak on the development of the florist business in the country may be somewhat presumptuous still I may be able to bring out some facts which will do some good to all of us.

THE EARLY DAYS.

The beginning of floriculture in America can be traced to the year 1824, and its birthplace is Philadelphia. Product and methods were then very crude, but only a few years later, 1830-40, the building of greenhouses commenced and herewith the production of a better class of flowers. From that time on to the present the demand for palms, ferns and cut flowers has grown faster than the regular agricultural branches.

The wholesale value reported in 1905 was $18,432,522, and considering that the cost of merchandising the product or, in other words, the selling expense to which the retailer is subject to, necessitates a value increase of 100 per cent, it is fair to assume that the retail value of the above is $50,000,000. The annual income from the sale of cut flowers is by government statisticians estimated at from $12,000,000-$14,000,000 divided approximately: Roses, $6,000,000; carnations, $4,000,000; violets, $150,000; chrysanthemums, $500,000. The total investment in land and buildings of 6,159 establishments is $50,708,671.

Of artificial fertilizers $316,038 worth are used; wages paid, $4,155,979, at 22 per cent higher than any other line of agriculture. The state of New York reports 983 establishments with 10,690,777 square feet of glass. Illinois has 499 establishments with 8,414,514 square feet of glass. Michigan has 215 establishments with 2,089,878 square feet of glass. Arizona has one establishment with 300 square feet of glass. The average prices obtained for flowers between New Year and Easter, exclusive of American Beauty roses, follows:

Roses.

	New York.	Chicago.
1890-91	$5.25	$6.00
1892-93	4.00	5.00
1894-95	3.50	4.20
1896-97	5.25	6.20
1898-99	6.00	6.00
1900-01	6.50	6.25

Carnations.

	New York.	Chicago.
1890-91	$2.00	$2.50
1892-93	1.62	1.80
1894-95	1.62	2.40
1896-97	1.75	2.25
1898-99	2.25	2.75
1900-01	2.50	2.00

Violets.

	New York.	Chicago.
1890-91	$1.00	$1.00
1892-93	1.15	1.60
1894-95	.85	1.00
1896-97	.67	1.00
1898-99	.55	.95
1900-01	.50	.75

This is a fair résumé of the result of 75 years of earnest hard work, a business, an industry, a luxury developed from nothing prior to 1824 to the enormous annual production of $50,000,000 worth of merchandise. How was this brought about? To whom belongs this great achievement? That is hard to tell. Every community has its pioneer in our trade as well as in any other. We all know them, have heard of them and honor them for the great work they have done for us, blazing the trail so we may today walk on an even road to further success. Those who smoothed the way for us, did not do it in marble palaces; they offered their product in the open market and on the street. The law of evolution is just as severe with us as any other business. The method of selling flowers on the street, which many of us despise so much today, was the beginning of our legitimate business. The people who today come in the store buying carnations at $1 per dozen and expect a gilded box with them and an automobile delivery, years ago were satisfied with inferior goods bought on the street corner wrapped in newspaper.

UNUSUAL FLORAL DESIGN BY GUDE BROS., WASHINGTON, D. C.

The nation has grown in wealth, its people have started to indulge in luxuries and the wise ones among us whom we today admire, or envy according to our disposition because of their success, are the ones who took advantage of the trend of the times and produced and arranged what they produced in accordance with the demand. Right now we are in the midst of a period of evolution and many have seen that the strain of producing and retailing is too heavy for one mind to control successfully.

There must be a complete diversion and still a complete harmony. A field of opportunities as great as ever lies before us if we only know how to grasp it. The daily increasing luxury in private homes opens up large avenues of development in our trade, and, as the retailer becomes acquainted with these facts, as he realizes the opportunities before him, he arranges his salesroom, his fixtures, his plants and flowers not only to meet this ever increasing luxury, but to lead on to it and create demand for his ware. To enable him to do this, he must harmonize with the grower and he in turn equips his establishment to be able to produce the quality demanded.

While doing this, we are not doing anything strange; it is simply a repetition on a larger scale of what our forefathers in the business did for us. In this constant pushing ahead of our product lies the secret of our past successes, and here most of the future will find its satisfaction. The fakir fills the same place today that we filled years ago ourselves, and he is doing us a great favor by educating a large number of people into the habit of buying flowers. It will be only a short time before today's buyers of street flowers will become buyers of store flowers.

THE PUBLIC APPETITE.

The future will be the consequence of our present action. We can make it a great success and sell $100,000,000 in a year 10 years hence, or only

$50,000,000 as we do today. The public appetite for our product has been awakened; all we have to do is to sharpen it. Other industries are showing how. Their principle is to show what can be done. No product will lend itself so well to create a demand, or a desire to possess as flowers and plants. For a community of florists to unite in a supreme effort and show the public what they can do by arranging a public exhibition, is the next step that should and must be undertaken.

Our product does not stand for the expense of daily advertising, and the only way open for us to impress the public of our right to exist, to be considered by them to be a necessity for them, is by periodical exhibitions. We may shrink from it, and delay, but it means only that much delay from reaching the top. Some of our sister cities have recognized the value of exhibitions, and are today spoken of as flower cities.

Looking back at the statistics, we notice a decline in prices from 1890 to 1900, it is not always in actual dollars and cents, but knowing that the average product of 1900 is far superior to that of 1890, this decline might be alarming were it not for the fact that it is one of the great reasons of our tremendous success.

The florist, unlike any other tradesman, has chosen the public as his partner. We are constantly straining our nerves to produce larger flowers, better flowers, still we do not ask any higher prices. We may find fault with this and, putting the ear to the ground, we can hear the grower growling because the retailer does not pay any more than usual, still were it not for that our ware would not be in the demand it is. The grower may be put to some additional expense in producing the higher grade of flowers, but still much greater is the expense the public has put on the retailer in selling and arranging and delivering.

GREATER VARIETY NEEDED.

It might be well to touch here the subject of finance, but this in itself is too great a subject to speak upon now. Still one point I like to urge before closing, and that is: Why do we confine ourselves to so few flowers? Truly carnations and roses are favorites, but only because we made them such. There are many others which deserve our attention and the public will be very thankful for them. In fact, our future development depends on the production and evolution of a much larger variety of cut flowers. Like other industries we must bring forth new products to entice the buying public, and, like our forefathers in the business have done, we must profit by their experience and by producing new and better varieties, place a distinguishing mark between the trader at the curb and the legitimate florist.

Fine Boston Fern Grown by Amateur.

A correspondent of Carl Cropp, of Vaughan's Seed Store, Chicago, writes to him as follows, enclosing the photograph from which the accompanying illustration was made: "This is a photograph of a fern you sent my wife for a birthday present just two years ago. It has 117 fronds, the longest of which measures 7½ feet." Pretty good this for a lady amateur.

THE ROSE.

Planting Young Stock.

A few suggestions in reference to planting the young rose stock, which is our most important work at present, will be a timely topic, and there is no denying the fact that there is a great deal involved in handling the stock as it should be. These suggestions are only a repetition of what has been often quoted in these columns, but perhaps they will in a measure help the grower lacking experience and for this reason more than any other they are given:

An Amateur's Boston Fern.

In the first place, the houses should receive a general overhauling. After removing the old soil, wash the benches off and clean carefully underneath them as well as in the walks. Be liberal with the lime wash on side walls as well as the bench boards and when slaking the lime use about two pounds of flowers of sulphur to a bushel of lime. An ounce of carbolic acid added will destroy much vermin and will do no harm to the plants. Now in order to get the good effects of the lime wash, it is not necessary to have it as thick as cream. What is more important is to have it penetrate the boards and by applying it immediately after slaking, while hot, a thin solution will answer the purpose.

The next step will be the filling of the benches and properly preparing the soil to receive the plants. The soil should be broken up finely and should be in a dry condition by all means before undertaking the planting, not as dry as dust but dry enough to settle closely around the roots when tamping around the plants, instead of forming a concrete base around the plants which it will come quite near doing if the soil is handled wet. Wet soil will never get into just the proper condition throughout the season so it will be seen that the condition of the soil makes a great difference towards establishing the plants quickly. When planting grafted stock it is necessary to use more soil, five inches being the least one can use in order to have the splice covered after the soil is leveled; for own root stock from 4 to 4½ inches will be sufficient. If the plants are especially well grown the latter depth of soil will be preferable. Now for the spacing of the plants. Bride, Bridesmaid, Golden Gate, American Beauty, and the sturdier growers will require a little more room than Killarney, Richmond, and My Maryland, as the latter varieties have a very upright habit of growth. The former can be planted 16 inches apart in the rows and 12 to 14 inches between the rows. A four-foot bench will take four rows of plants nicely, by planting the outside rows five inches from the edge of face boards, and the spacing of Killarney, Richmond and My Maryland can be 14 inches in the rows and a foot apart across the beds.

Be sure that the soil is firmly packed before beginning to plant and it is very important to have the soil gone over by hand and well broken up before leveling and packing. The packing can be done by hand also, care being taken to have the soil pressed firmly at the sides of the beds which usually contain the coarser soil. After leveling the soil the quickest method of marking off rows, is to take an old sash bar or similar stick, drive nails through it at the distance desired crosswise of the beds and an extra long nail to act as a guide on the bench siding. With a man on each side of this rake four, or more rows can be quickly marked and they will be absolutely true and the work of laying off the whole bed can be done quicker than it would take to stretch a line for a single row. The wise grower will have more plants than are required to do the planting so that only select plants may be used. If not the importance of this precaution in the future will be seen. Look carefully at the splice of each grafted plant used, and see that all are sound and perfectly joined; otherwise there will be an unsightly space here and there during the winter, as it is usually some time after planting that the poorly spliced grafts go to pieces. The own root stock should be as carefully gone over; avoid using those plants with weak watery looking foliage, streaked or yellow in appearance or those with black stems commonly called "black legs." The bark should be healthy and green in color down to the pot. As stated above the balls of the plants should be placed well down so that the splice will be entirely covered when the beds receive their final leveling. Before planting take a stick and work off the distance the plants are to be in the row, and make dents in the soil along one of the rows the entire length of the bed. By placing the plants along this row the other rows can be laid out opposite. Open up the holes with a trowel, making them large enough to take the ball without crushing it. Do not remove the drainage as it does no harm and

very often the roots are too much disturbed by removing it. Press the soil firmly around the ball and level around each plant. Have a man follow up the planter with a tamper made of a 9-inch length of a 2x3 block of solid wood rounded off at one end to form a handle. Do not tamp over the ball but around the edge with care so as not to crush it. After tamping leave a saucer shaped depression around the plants so that they may be watered individually for several weeks, or until they have made a decided start at the roots, then the soil can be leveled off and given a general watering as they require it.

The stronger plants will naturally dry out more rapidly than the small ones and the depression offers the only means of giving each plant the required amount of water. It will also be necessary to keep the surrounding soil moist on the surface to reduce the heat and to give the plants a general bracing up. Avoid over-watering and extreme dryness and, in order to have the plants become quickly established, syringe very early and again at noon. Although it is claimed by some that to spray the young plants overhead in the middle of the day is harmful, we have found them much benefited by this treatment which greatly reduces the temperature and keeps the air humid, a condition essential to plant growth indoors or outside. In reference to carried-over stock; when shifting it from benches to solid beds we prefer to do very little pruning until the plants are well established in their new surroundings. Then we prune carefully at intervals. We let them dry up for a week or 10 days keeping up the syringing so they will not receive a sudden check. Lift them with 10-inch balls and plant low enough so as to have the top of ball just below the surface. Use a sharp spade to cut out the plants and trim off the surplus soil after lifting them carefully with the hands. Use sufficient help to handle the work rapidly; syringe several times daily until the plants brace up and avoid draughts. Special treatment is required for the plants to be carried over another season without removing them, but as it will be sometime before this work will require attention we will leave this for another note. E.

Cypripedium Bellatulum Album.

This is a pure white form of the distinct and beautiful Cypripedium bellatulum, a plant not remarkable for size of bloom but a remarkably beautiful and interesting orchid. It has long been the idea of orchid growers that lime in some form is beneficial to the bellatulum section of cypripediums. Whether this is so or not we have seen remarkably fine specimens grown in a compost in which large nodules of limestone were used and we never had such good foliage and flowers on C. bellatulum as when the loam used in the compost was cut from soil overlying limestone. All the varieties are very beautiful plants, the flowers being attractive and the foliage even more so. They like a shady position and a warm moist house and must not be overwatered in winter. Grow them in small pots in a compost of equal parts of loam and peat with a good sprinkling of the limestone referred to and some sphagnum moss.

THE CARNATION.

Holding Over Carnations.

ED. AMERICAN FLORIST:—

If not mistaken, I read in your paper about hold over carnation plants doing just as well the second season as the first, and that they will come earlier than young planted stock. Please give through your paper what information you can on that question and what kind of stock. I have White and Pink Lawson and Enchantress. I have one house that is very late, plants stocky and healthy.

A GREEN HAND.

Colorado Springs, Colo.

Nearly all of the standard varieties of carnations have considerable free or perpetual flowering blood in their composition, consequently it is perfectly natural to carry them over for more than one season. During the writer's early experience we grew the same plants from year to year for three and four seasons, giving them short periods of rest or cool treatment between crops, but this was before the days of flowers with long stems. Replying to that part of the query as to the plants doing equally as well the second season as the first, this may be possible early in the season, but taking month for month during the entire season the new stock will show up to considerable advantage.

If we were going into this method of culture now we should lay plans at the time the plants are put into the beds by planting them farther apart than usual, also adding an inch or so to the depth of the soil and to mulch frequently during the first season at intervals as the plants will take care of it without giving them a setback. The plants may then be given the closest attention to carrying them through the summer to prevent red spider infesting them; this with the work of keeping them free of aphis will be found the most difficult part of carrying over the plants. Coming to the point of the kind of stock under notice the plants being late stock and healthy, they are in the best of condition to experiment along these lines. The varieties mentioned, White and Pink Lawson and Enchantress, are among the best of growers and respond readily to being transplanted and also, if not enough new stock is on hand, they can be bought cheap. Taking this into consideration we would advise against carrying over the old plants. C. W. JOHNSON.

Notes in Season.

The plants in the field must have close attention now; the ground should be kept clean of weeds and the cultivators kept busy right along. Be careful to keep the shoots pinched back; this part of the work should be done as quickly as the growths get large enough to handle properly, it being equally detrimental to the plants to top back the shoots too early or to leave them to get overgrown. Another important item connected with the field culture, especially at this time when heavy thunder showers are a frequent occurrence, is to guard against any standing pools of water. If there are any low places cut little ditches to carry away the water. Standing water around the plants during the summer is one of the causes of stem rot.

That bench or two of old plants being carried along for a few flowers that come in useful should be kept trimmed and disbudded, plenty of ventilation given and watered as they require it. The plants will also be greatly benefited by a dressing of pulverized sheep manure occasionally. The work of getting the plants intended for indoor summer culture into their permanent quarters should be pushed forward without delay now. If the plants are being held close together in beds it is best to treat them to a slight drying off a few days before planting to harden them a little, but when lifting for planting the soil should be thoroughly moistened. This also applies to stock being grown in 4-inch

CYPRIPEDIUM BELLATULUM ALBUM.

pots. The houses, benches and all connections should be thoroughly cleansed and sweetened as is customary before bringing in the soil. The soil should be thoroughly pulverized and in a partly dry state. It is a mistake to handle soil for carnations when it is wet and heavy. We make the compost for our carnations one part of well rotted cow manure to four of soil, with a dressing of bonemeal worked into the beds just before planting. The soil should be made firm, but not solid, before planting, and the plants set 10 inches apart each way. Shade the glass lightly at the time of planting; it is best to do this with a syringe so that only enough to break the direct rays of the sun is put on. C. W. JOHNSON.

The Bursting of Carnations.

Carnation growers are familiar with the often serious tendency of the blooms to split the calyx, or burst, as the trouble is commonly called. The immediate cause of bursting appears to be a too rapid or premature petal development before the bud as a whole has made its growth. It is very prevalent in some varieties. F. Dorner, Sr., says: "There are numerous varieties which habitually split the calyx and are worthless. There are also some which under certain circumstances split what appears to be the strongest kind of a calyx, while, on the other hand, some large flowers are held intact by an apparently weak one." It goes without saying that worthless varieties should be abandoned. Growers have learned from experience, however, that unfavorable cultural conditions may cause serious cases of bursting among varieties which are profitable bloomers when properly grown.

Although there are well-established methods for the general culture of greenhouse carnations, certain varieties differ sufficiently in their requirements to call for specific treatment in some form or other. Such specific treatment must be determined from cultural experience. On the other hand, the fragmentary literature on the subject of bursting would seem to warrant the general statement that plants which have been hardened off or grown slowly, whether through a low temperature, dry soil conditions, or a lack of fertilizer, are very apt to produce bursted blooms when suddenly overstimulated either by too much heat, moisture, or plant food, or through some unfavorable combination of these conditions. The Maryland Experiment Station reports an investigation along this line, in which it appears that a location unfavorable for uniform temperature and moisture conditions will aggravate the bursting tendency. Such a location is found in the rear part of a side bench, when there is no space between the bench and the wall. "It was noticed that the row of carnations located near the glass of the side benches produced more bursted flowers than did the other rows on the benches. During the winters of 1904-5 and 1905-6, a record was kept of the good flowers and the bursted flowers on the different rows. The row nearest the glass produced 21 per cent of bursted flowers, while only one other row gave as high as 7 per cent. It was found almost impossible to secure uniform conditions near the glass, the soil drying out badly, although receiving a normal supply of water. Many growers find less trouble with this bursting of the calyx when the benches are so placed as to allow a walk between them and the side walls."

The walk next to the wall provides for free air circulation around the bench, thus lessening the danger of excessive sun heat and, in some cases, of excessive bottom heat as well. Side ventilators can be used with greater safety and the bench will be given closer inspection.

Silver Wattle (Acacia Dealbata).

Reproduced From the Garden.

The Rhode Island station recently reported an experiment in which the principal object was to determine what influence, if any, nitrogen has upon the tendency of the calyx to split open. Three varieties were used in the work in order to determine whether the same results would be secured regardless of varietal tendencies. The varieties were Hector, Wm. Scott, and Lizzie McGowan. "A long, narrow bench was divided into two equal beds, each 26 inches wide by 8 feet 9 inches long. Like amounts of subsoil were then placed in each. The manurial treatment was identical, excepting that on the east plat no nitrogen was applied, while on the west plat nitrogen in a nitrate, an ammonium salt, and inorganic matter was applied." The experiment was carried on for two years.

With nitrogen in the manures a great advantage resulted with the variety Hector, both in salable flowers and the number of those with a perfect calyx.

With the variety Lizzie McGowan, the results were in favor of the use of the nitrogen, especially the first year of the trial, but were far less marked than with Hector.

In the case of the variety Wm. Scott, the results were better where nitrogen was omitted than where it was employed.

The results show that when the house is maintained at the same temperature, generous manuring with nitrogen may increase the total number of perfect flowers of one variety of carnations and lessen the number of another variety.

Whether the same difference, as a result of the manuring, would appear if the most favorable temperature for each variety were maintained in the house is yet to be determined.

It appears probable that the character of the manures, as well as the degree of forcing, tends to affect the splitting of the calyx.

C. W. Ward, in the following words, points out how the carnation breeder may lessen the bursting tendency: "In selecting a seedling for the second year's trial, be sure of a firm, large, well-formed calyx, for if you fail to select good firm calyces a crop of 'bursters' may be your reward." The commercial grower likewise can reduce the trouble by studying the habits and requirements of the individual variety, and by so regulating the various conditions in the greenhouse as to prevent sudden fluctuations in the rate of growth. Although it is doubtful whether the bursting of the blooms can be entirely eliminated, further investigations along this line may lead to methods of control which will reduce the trouble to a minimum.—Experiment Station Work.

Acacias and Their Culture.

The Australian acacias, or wattles as they are popularly called, form a valuable group of plants for greenhouse decoration during winter and spring, while for the mild districts in the south they are excellent for outdoor culture. When grown for the conservatory or greenhouse, says the Garden, they are usually placed in pots or tubs; but where space can be afforded in winter gardens and similar structures they are first-rate subjects for planting in borders. Planted in this manner they grow rapidly into large bushes and flower profusely. One objection may be raised to planting acacias in borders, for, in the event of a specimen getting too large for its position, it cannot be successfully transplanted without going to a great amount of trouble, for few shrubs or trees are more difficult to establish after serious root disturbance. By an annual pruning from the earliest years of a plant's life, however, it may be kept within bounds with little difficulty, while the selection of varieties of moderate growth is a point to consider. Although acacias will stand a very severe annual pruning it is unwise to cut them back to old wood, for it rarely breaks away again satisfactorily.

The majority of the sorts grown in commercial establishments are increased by cuttings. These may be made from young shoots three inches to four inches long during summer. They should be taken when the wood is about half ripe and inserted in well-drained pots filled with soil composed of two parts peat one part loam and one part sand. The soil must be made firm and the cuttings should be well firmed into the soil. When inserted, stand in a moderately warm propagating case and shade from bright sun until roots are formed. The young plants should be potted singly and firmly in soil similar to that recommended for cuttings, except that only half the quantity of sand will be required. Stand close to the glass and keep the young shoots well stopped until a good foundation has been laid. When large enough to bloom, stopping should cease early in May, so that long growths may be formed which will bloom throughout the whole of their length. For large plants equal parts of peat and loam may be used, with a little sand and a handful of crushed bones placed over the crocks.

It is a great mistake to overpot plants, and it will be found much better to feed with manure water during summer than to give too large pots. Plants of flowering size may be plunged outdoors in full sun for the summer. During this period soot water once a week may be given with advantage. They should be taken indoors in September and be placed in a cool and airy greenhouse, taking care to damp the floor and stages frequently. Some sorts may be had in bloom in December, and a succession can be obtained until the end of May. All pruning ought to be done as soon as the flowers fall, so that as long a growing season as possible can be had.

Although upwards of 100 species are known, a dozen or so can be selected as being well in advance of the majority for ordinary purposes, and the sorts mentioned in the following notes may be depended on to give a good account of themselves. A. dealbata, a tree commonly called the silver wattle, by reason of its pretty silvery foliage, is a most floriferous plant when allowed free growth, its little fluffy, yellow balls of flowers being borne in countless numbers. It does remarkably well when planted out, but is not a very good pot plant. It is the so-called mimosa of commerce. A popular plant for pots is A. Drummondii. This under border culture rarely grows more than four or five feet in height, and when grown in a 5-inch or 6-inch pot it attains a height of from 1½ feet to two feet by nine inches to one foot in diameter. Its yellow flowers are borne profusely. It thrives better in peat and sand than in soil containing a lot of loam.

A. armata is also a useful and popular plant, while its variety angustifolia is of peculiarly graceful outline. A. Riceana and A. leprosa are a pair of elegant shrubs suitable for planting against a tall pillar or for pot culture. The long, wand-like branches are very graceful and bear flowers throughout their whole length. A. cultriformis is well known by reason of its lovely glaucous leaves and rich golden flowers while A. verticillata is a free-flowering plant of great value for either pot or border work. In addition to these the following sorts are worth attention: A. Baileyana, A. hastulata, A. juniperina, A. longifolia floribunda, A. myrtifolia, A. platyptera and A. verniciflua. All are free flowering, and in each case the flowers are one or other shade of yellow. As acacias give comparatively little trouble, they are excellent subjects to use for the conservatory in companionship with forced bulbs and shrubs during the winter and spring.

THE PIKE'S PEAK FLORAL CO'S HOME PLANT.

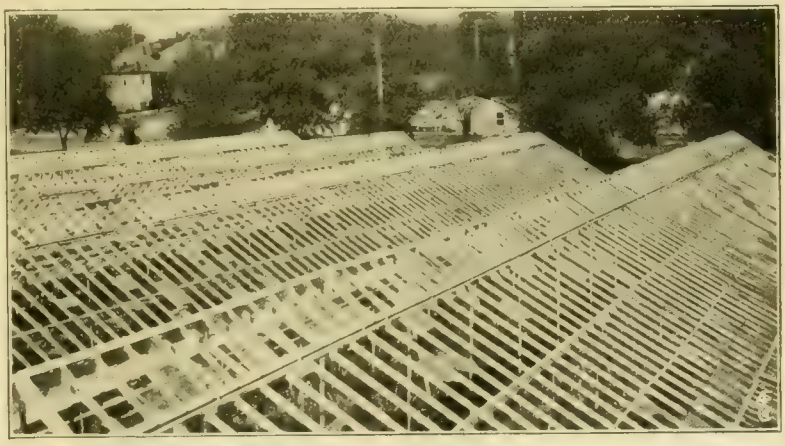
Protection by Screen Avoids All Damage by Hail.

Protection From Hail.

Owing to the pressure on our space last week caused by seed trade convention matters the accompanying interesting illustrations had to be held over. They show very distinctly the value of protection from hail. One is the home plant of the Pike's Peak Floral Co., of Colorado Springs, Colo., the other, the one so badly injured, being the new plant recently purchased by the company from Wm. Clark. This little picture tells the tale of hail destruction better than words. Probably 90 per cent of the glass was lost in addition to great loss from bedding plants and other occupants of the houses.

The screen used on the house in the first picture was No. 20, three-quarter-inch mesh galvanized wire, galvanized after being woven, that is bought in bales containing about 900 square feet. The wire is stretched across each house in a continuous sheet not longitudinally and where the ventilators are hinged to the ridge ½-inch galvanized iron pipe is run along the ridge of the house, high enough to keep the wire well above the ventilators when these are extended to their full capacity. This horizontal support is fastened by T joints to upright pipes of similar dimensions which are attached to the house by screws or bolts, the uprights being placed at intervals of 10 feet. Each two widths of netting are fastened at short intervals to keep them from sagging and coming apart.

The home plant has an area of 75,000 square feet and the manager here does not consider the screen any detraction from the appearance. It causes no deterioration to the stock by shading though it has been left on continuously during the winter. This procedure might not be practical in climates where snowstorms are frequent and where the sun is not so bright as in Colorado, but in this favorite climate at any rate the end certainly justifies the means.



HAIL DESTRUCTION AT THE PIKES' PEAK FLORAL CO., COLORADO SPRINGS, COLO.

Unprotected Houses With 90 per cent of Glass Broken.

The plant injured so badly is to be entirely remodeled and will be ready as usual for the fall business. Other local men lost considerable glass by the hail, John Smith, Frank Hayden and F. F. Crump being among the unfortunate ones. The latter lost about one-third of his glass. J. B.

Field-Grown Chrysanthemums in Eng.

Ours may not be an orthodox system of chrysanthemum growing but it is a profitable one for us. We grow for cut-bloom, large and small, for bunching all for market. The plants are grown outdoors and all are lifted, except a skeleton house or two which are canvased. We have glass at liberty only from early November to January being fully occupied all the rest of the year with tomatoes and cucumbers. The chrysanthemums are followed with a crop, sometimes two, of daffodils and tulips. We lift the chrysanthemums and plant before frost. After cutting is over we lay the old roots in boxes and frames for stock. We take no cuttings but depend on the rooted offshoots for field work and these do well. Our first batch is now being topped, but we have still more to go out. We wait for rain then plant out quickly, all hands to the job. No water is given after planting.

We made the equivalent of 60 cents per dozen blooms of Western King this season. Now (mid-June) we are not only topping the growing shoots, but also cutting back into the hard wood, if plants are leggy. Our varieties are the Quintus family, Western King, Money Maker, Lizzie Adcock, Niveus, Nivette, Jubilee, Source d'Or, all planted out about the last week of April. We find the later planted a very useful line, coming in when the bulk of the first-lifted are done. Hoeing the fields, and manuring, applying soil as required with the necessary staking and tying, make up the summer culture. In lifting we depend much on the late autumn rains, the plants then lifting with balls, sustaining little check.

Australian Shrubs as Grown in California.

[A paper read before the Pacific Coast Horticultural Society, San Francisco, by T. F. Taylor.]

The first thought that naturally comes to one when the subject of Australian shrubs is broached, is on eucalyptus and acacias; but as this paper is to deal only with shrubs, gums are not to be considered and, furthermore, gums alone would furnish splendid material for a paper at a future meeting, particularly as at the present time a decided interest is being taken in this state in eucalyptus culture and to the extent and value of the wood of various varieties as to its adaptability for building or other constructive purposes.

As the purpose of this paper is not merely to catalogue all, or the majority of the Australian shrubbery, but rather to enumerate those which have been the most useful under trying conditions in this vicinity, those which have lent themselves most readily to the art of landscaping, or have best given forth their strange and unusual beauty of form, foliage, or flower, let us pause, figuratively, under the fragrant shade of the acacias. The air is redolent with a soft perfume that is reminiscent of our youthful days, when we chewed on licorice sticks with an appetite that had not been perverted by chooclate creams, butter-scotch or brown pressed plugs of something with little tin tags on them.

But back to the present and to our much admired friends Acacia floribunda and A. fragrans. The latter has been much used as a street tree in the past in this city with good results; when not placed in an exposed position, it forms a good shapely head and responds to the knife quite cheerfully, besides presenting a lively, pretty appearance with its profusion of fragrant yellow bloom. A floribunda is much more trailing or straggling in habit with longer, tougher foliage, borne with a graceful abandon peculiarly its own. Its fragrant flowers appear in such pofusion that it well merits its specific name of floribunda. Of the two it is much the hardier, where exposed to wind, and when established will withstand severe drought. This is very important in a climate like California where we have a period of six months or more without rain, annually. There has been in all probability no more widely grown shrub in this state than A. longifolia, which is more popularly known as A. latifolia. It has been more largely used as a street tree in this city than any other tree, being a fast grower, unmindful of neglect, withstanding with its inherent vitality the dust and wind, the prospective president in embryo with his jackknife and even the devastating hedge shears of the French gardener. Where it is desirable to cover an exposed wind-swept piece of ground in a short space of time with a low shrubbery, Acacia latifolia naturally suggests itself; in fact it may be accepted as an axiom by the gardener "When in doubt, plant Acacia latifolia."

The west end of the Golden Gate park in the immediate vicinity of the beach shows the remarkable hardiness, the vital tenacity and the superior adaptability of A. latifolia as a shelter from wind or the cutting sand which is carried with it. And A. lophantha; every old time native son knows it; he used to and still calls it the stink bean tree. He used to take the green beans of it to school and tramp them on the floor to annoy the teacher with a foul odor that might drive her from the room. He usually succeeded, but that does not alter the fact that A. lophantha is a remarkable sand tree, at all times presenting a beautiful feathery appearance attracting the attention and admiration of all who see it for the first time.

A. Coulterii with its low, spreading, graceful habit and striking grey foliage is probably the most decorative of the acacias and would probably appear to excellent advantage in large rockwork. A. melanoxylon is one of, if not the most, valuable street trees for San Francisco; it is not quite as hardy for the first season as A. latifolia but is an ideal tree for form; it differs from the average acacia in that it requires a stiffer clayey soil and in time becomes a tree of goodly proportions.

A dainty shrub at all times is A. Bayleyana, but when in blossom a reigning queen of beauty. It is hardier than its appearance would indicate but requires occasional watering during the summer. A. armata, A. verticillata and A. callamistrata are distinct types highly ornamental and useful in large plantings. A. dealbata, in congenial positions, assumes the proportions of a tree generous in proportion and more so in the profusion of clusters of beautiful yellow flowers which obtain a ready sale in the florist's stores. If Australia had given us only of her acacias we should be under a heavy obligation.

THE PITTOSPORUMS.

But what of the pittosporums? The two best known varieties are Eugenoides and Nigricans. Each one is prettier than the other. Which one? P. eugenoides has the larger foliation and with its smooth shiny leaves of a chrome green tinge is one of our most desirable shrubs. P. nigricans has a more upright growth, smaller and darker foliage with blackish branches and seems to harmonize readily with the majority of shrubs; but one of the chief charms of these two varieties is the quaint delicious odor emanating from the modest little purplish flowers half hidden in the foliage, an odor that gently assails one in a manner reminiscent of the sweet brier in the older countries, after a rain. Both varieties named are being used for hedges and are a relief from the sombre stereotyped hedge of cypress.

The casuarinas form an interesting group, one of the most striking of which is C. equisetifolia with its unusual equisetum like foliage, drooping and graceful, making a pleasing effect as a single specimen alone. It is also unusually hardy. Others of more than ordinary interest are C. suberosa and C. leucadendron. The melaleucas or, as they are apty named, the "bottle-brush," form a welcome addition to our hardy shrubbery; and the coprosma, what shrub has the same intensity of color? Its greenness is almost luminous and its handsome orange red berries form a rich contrast to its foliage.

One of the very best of the park shrubs assuming a tree form is Tristania conferta. This shrub or tree as it may eventually be, is quite beautiful, symmetrical in growth, pretty brown bark, the broadly ovate lanceolate leaves being tipped with a metallic reddish luster hard to describe. It is one of the myrtacæ closely allied to the gums and during winter bears a number of pretty white blossoms closely resembling those of Eugenia apiculata. This plant is well deserving of attention and should be given a place in any decorative planting of consequence. It would harmonize with and relieve large plantings of lilac of their tameness when out of flower.

DRACENA INDIVISA.

If there be any one plant more than all others combined that has given a touch of the tropics to the appearance of this city it is Dracæna indivisa planted on our streets or in our parks and gardens. These very useful shrubs withstand the wind, indifferent planting, poor soil and neglect in a manner worthy of admiration. Quite true, the stems do present a rather bare appearance when the plants become tall, but then the average house gardener would trim them that way anyhow. I believe that if one of those knights of the hedge shears were to meet a feather duster in the garden he would trim the whiskers on it till it would look like a window brush.

And then there is Eugenia myrtifolia with its shining bronze foliage forming an elegant contrast or rather harmony with similar forms of shrubbery having the usual shades of green; and E. apiculata, a gem of loveliness when decked in its blossoms of white; and speaking of white is there anything growing outside more sweetly chaste than those clean pure blossoms of the white swainsona? What a pity it gows so readily, otherwise the florists and the public might rave over it. Clianthus puniceus is another of the

Australian shrubs which has made itself at home here. Outside of our parks it is seldom grown as a shrub. It trains very readily, and how many dull old fences have been covered up by its refreshing green foliage and its odd pendulous clusters of clawlike flowers that have so aptly suggested the common name of crabclaw.

OTHER GOOD SHRUBS.

Myoporum lactum has proven a valuable acquisition to our shrubbery. It is a very vigorous handsome shrub and has in a marked degree that desirable characteristic of the Australian shrubs, the ability to withstand our dry seasons without irrigation. It appears to be equally hardy in our hot dry valleys or close to the ocean shore exposed to the harsh sea winds. And we have the corynocarpus, hakeas, myrtles, ericas, the gorgeous Sterculia acerifolia and the dicksonias, alsophilas, other tree ferns and palms, which, like the gums, will furnish a paper of themselves, and we might go on and on like Longfellow's brook, for the further one goes into Australian shrubbery the more he becomes aware of the vastness of the subject and the dearth of knowledge we have of that country of animal and vegetable wonders. Where is there a shrub in which there is combined so many admirable qualities as in Leptospermum lævigata? There were no colored plates in the text books to herald it as being anything out of the ordinary, but in Golden Gate park it has received its full meed of appreciation. Out at the very edge of the beach where the spinthrift of the waves adds its share of moisture to the dreary fog, out where the sand laden winds swirl and cut like needles, there this remarkable shrub not only exists but thrives. In many portions of the park may be seen handsome clumps gracefully informal, while on the other hand it may be seen in formation of excellent hedge, while again with a little encouragement it entirely embowers a stretch of walk producing a perfect ideal arbor effect, which in the early summer is a delight to the eye when the trailing or drooping foliage is heavy laden with its wealth of pretty white blossoms.

It is worthy of mention also that leptospermum may be used to excellent advantage for decorative purposes; your huckleberry of the florists is stiff and artificial in comparison; name for us another shrub with the versatility of our lowly modest leptospermum. There is also a very interesting variety well named Cricafolia which is quite pretty when in flower. But I am again reminded of the babbling brook and will close with the hope that collectors or importers may be induced to send us many of the Australian shrubs which to us are only names in certain text books, or that some one having the ways or means to introduce them will in spirit of good will towards the horticulture of our favored state grasp the opportunity to add to our shrubbery some of the many desirable, but to us unknown shrubs which we may consistently believe are yet to be introduced from the land of the acacia and the leptospermum.

To Be Done Now.

IN THE GREENHOUSES.

Push on with all repairs to benches, painting and heating alterations at every opportunity.

Reduce the water supply to the rose benches that are to be held over for flowering another season, but keep the tops sprayed occasionally.

Don't try to hurry Begonia Gloire de Lorraine in the hot weather. In another few weeks will be plenty of time for the plants to make free growth.

Allow no rubbish or old flowers to remain on the rose benches, as this attracts and forms a hide for thrips and other insects.

The last sowings of asters for flowering under glass after the open air flowers are past should be made.

Continue to repot all young stock of dracænas, crotons and ornamental foliage plants generally and work them along while there is plenty of room in the plant houses.

Tomatoes can hardly be overfed if the atmosphere around them is kept cool and there is a good set of fruit on the plants.

Pot rubbers as soon as the roots show through the moss and ring and moss others.

Place the amaryllis bulbs in a light position, not under benches in the dark. Absolute dryness is not necessary, but do not go to the other extreme.

Keep all flower buds picked from begonias and geraniums for winter flowering, bouvardias and the latest fuchsias.

Clean over the benches of Asparagus Sprengeri and leave no short, stubby shoots or seeds, as they prevent the production of good, useful shoots.

OUTDOORS.

Keep down weeds, such as coarse grasses and plantains in the lawn. The plantains ruin the grass around them and the coarse grasses spread their roots below as fast as the leaves above ground, making them difficult to eradicate.

Never let the wild mustard or similar weeds go to seed or they will cause untold trouble in the coming seasons.

Never trim the side shoots on standard fruit or other tree stems too closely. These act as stem thickeners if allowed a reasonable amount of liberty.

Always have a pair of secateurs in hand when making the rounds of the nursery rows to remove shoots that are going in wrong directions.

A little mignonette sown now will be very useful for cutting later in the season when other flowers are over.

Gather sweet peas carefully with a sharp knife to avoid injury to the vines.

Stake and tie all plants in the herbaceous border that need this attention, such as the giant asphodels, eremuri and others.

Trap earwigs and other insects around the dahlias, as they will give much trouble later when the flowers begin to open.

Look out for improved varieties, as the seedling herbaceous plants flower and mark them for propagating.

Leave no crops on the land that have ceased to be of value. Dig or plow them under, where they will benefit and not impoverish the soil.

Remove the flower stalks on rhubarb, sea kale and similar roots on sight.

How to Color Flowers.

With a simply made mixture a wonderful change may be made in the color of flowers. Take a small glass, but one large enough to dip flowers with which to experiment, says the Pittsburg Dispatch. Pour into the glass a small quantity of ether and to it add one-tenth of that amount of strong ammonia water. The mixture will now be ready for use, and with it any flower that is either violet or red in color can be changed to a bright green. The magical effect is almost instantaneous; for instance if a violet is dipped into the fluid it will immediately turn green. The same effect will follow with a red rose or geranium, the periwinkle, lilac, heliotrope or red carnation. All of these flowers will respond to this simple treatment.

The violet-colored sweet pea, when dipped into the mixture, will come out with its upper petals a deep blue and the lower ones green. White flowers treated in this way generally become yellow or deep orange, but yellow flowers seem not to be affected by the solution. The streaked carnation will turn brown and green. If some flowers are sprinkled with the fluid instead of being dipped they will present a mottled appearance instead of the whole flower becoming changed.

It is the ether that causes the effect to be speedy, as a somewhat similar effect is produced by the use of the ammonia alone, only the process is a much longer one. Another little experiment with ammonia and the aster, that fall flower and herald of the bigger chrysanthemum, is to give this odorless flower a pleasantly aromatic odor. Pour some ammonia into a deep dish, place the asters in a glass finger bowl and invert it so that the bowl containing the asters covers the dish with the ammonia in it. The fumes from the ammonia effect a change so that when the asters are taken out they will have a distnict odor.

OBITUARY.

John Crosby Brown.

John Crosby Brown, banker, capitalist and philanthropist, died at his summer home in Orange, N. J., on June 25, aged 71 years. He was senior partner of the firm of Brown Bros. & Co. of New York and Philadelphia, and head of the firm of Brown, Shipley & Co. of Liverpool, Eng. In addition to many other good works, Mr. Brown was greatly interested in horticulture, and his Orange estate has long been noted for its exhibits of chrysanthemums and other fine plants.

Daniel W. Langton.

Daniel W. Langton, a noted landscape architect and geologist, died at his home at Hoyt's Corners, N. J., June 21. He was found dead seated in an armchair in his sitting room, a small bottle clutched in his hand. Coroner Johnson, who was called, expressed the opinion that he had taken poison. Mr. Langton was a leading man in his profession with offices at 341 Fifth avenue, New York. He was a native of Mississippi, was 45 years old and had been a professor in Alabama university. Since he established a business in New York he designed a park for Jersey City and private gardens for a number of wealthy families in the vicinity of New York. He was a member of the American Society of Landscape Architects and a fellow of the Geological Society of America.

Miss Katherine Hefele

Miss Katherine Hefele died June 25 at the residence of her brother, Simon Hefele, 3361 Third avenue, New York. She was 78 years old. When a child of two years she was brought to New York by her parents from Germany. Fifty-two years ago her father, Joseph Hefele, started a florist business at the above mentioned site and though the greenhouses have given place to business and residence buildings, a store has always been maintained. Through her many years, from girlhood up to a few years ago, Miss Hefele had always been active in connection with the retail branch of the business, first with her father and later with her brother. She is survived by several brothers and sisters and a large connection of younger generations. The elder Hefeles recall that in the earlier days of their residence on Third avenue, old fashioned stage coaches daily passed their door.

GREENHOUSE glass prices remain unchanged, with discounts still quoted at 90 and 35 on double strength, and 90 and 30 on single strength.

THE American Seed Trade Association makes a vigorous protest against the distribution of free seeds by the Department of Agriculture. There are many other good reasons why this petty graft should be abolished besides its interference with the regular trade. —Buffalo, N. Y., Courier.

"A SUBSCRIBER" should send his name and address when the matter will be gone into. His name will not be published.

THE school board at Albany, N. Y., has agreed to make its ruling as to flowers at school exercises inoperative for this year. See our Albany notes, page 1208.

BULB time will soon be around again and early forcing stock, such as Paper White narcissi, Roman hyacinths and liliums for early work should be ordered.

THE National Sweet Pea Society (of England) will hold its ninth metropolitan exhibition in the Royal Horticultural Hall, Vincent square, Westminster, July 23, at 12:30 p. m. Chas. H. Curtis, Adelaide road, Brentford, Middlesex, is secretary.

WE are informed that Edward V. Low, of the late firm of Hugh Low & Co., England, has acquired the special stock of rare and valuable orchid varieties of the firm and intends to specialize in their culture at Hayward's Heath. The collection is very rich in white cattleyas.

THE third provincial show of the National Sweet Pea Society (of England) will be held at Saltaire, in connection with the Saltaire Rose and Horticultural Society, July 13. Chas. H. Curtis is secretary of the sweet pea society and E. Wright, The Glen, Saltaire, is secretary of the local society.

BURNET LANDRETH'S idea of irrigating old eastern farms that are suffering from drought, as well as western lands as yet unoccupied, that he expressed at the seed trade convention, is well worthy of every consideration. Its importance is far reaching, even outside of the seed trade in which Mr. Landreth is interested.

THE Cincinnati Florists' Club is leaving no stone unturned to make the coming convention of the Society of American Florists the banner one of the society. Seeing that the first convention was held here 24 years ago, the club has a grand opportunity and every member seems to be rising to the occasion manfully.

American Carnation Society.

The following new carnations have been registered during the past season with the Perpetual Flowering Carnation Society of England. Growers on this side will please take notice to avoid duplication of names:

Hon. Mrs. Francis Agar, seedling, deep rose pink, registered by The Hon. Francis Agar.

Mary Vilven, seedling, rose, registered by Blackmore & Langdon.

Ranslon Gem, sport from a cross of Boyer and Victory, apricot and orange, registered by Sir Rand. L. Baker, Bart.

Rose Dore, seedling, golden rose, registered by W. H. Lancashire.

Golden Glory, seedling, yellow, registered by Heath & Son.

Ethel Whitney, seedling, crimson, registered by Gor & Whitney.

Carola, seedling, crimson, registered by C. Engelmann.

Rex, seedling, light pink, registered by C. Engelmann.

Burrough Scarlet, seedling, scarlet, registered by E. T. Johnstone.

Black Chief, seedling, crimson, registered by Hugh Low & Co.

A. F. J. BAUR, Secy.

Horticulture in the Netherlands.

A horticultural exhibition will be held at Zeist, in the Netherlands, from August 25 until September 16 next. It is organized by the Zeist branch of the Netherland Horticultural and Botanical Society, and will be extensive, the government and the province of Utrecht affording subsidies, and his royal highness the Prince Consort has accepted the post of Hon. president. Although this exhibition is in the first place a national concern, foreign exhibits will be welcomed.

National Sweet Pea Society.

The proposed National Sweet Pea Society of America will hold its first annual exhibition at the Museum of Natural History, Columbus avenue and Seventy-seventh street, New York, on July 7-8. Through the courtesy of Dr. Bumpus the society will be allowed to use the Siberian hall. The judges will be G. W. Kerr (with W. Atlee Burpee), W. Sim of Cliftondale, Mass., and Edgar A. Higgins of Avoca, N. Y.

Papers will be read by Rev. W. T. Hutchins of California, Prof. Craig of Utica, N. Y., and others. Great interest is being shown by sweet pea enthusiasts throughout the country and it is expected that there will be over 1,000 vases of sweet peas exhibited. Application blanks for charter membership, schedules and further particulars and information can be had from Harry A. Bunyard, Secy. pro tem. 342 West Fourteenth street, New York.

International Hort. Exhibition in Italy.

The city of Florence, and the Royal Tuscan Society of Horticulture have arranged an international exhibition of horticulture for 1911, on the occasion of the fiftieth anniversary of the proclamation of the kingdom of Italy. The programme contains six classes: Ornamental foliage or flowering plants, either new or of recent introduction, fruit-bearing plants, vegetables and kitchen-garden plants, seeds, bulbs and tubers, colonial plants, flower decoration, horticultural arts and industries, horticultural literature and instruction, packing and preserving, history of horticulture.

Besides numerous awards of merit (grand medals, and artistic objects), the committee places cash prizes and medals to the value of Lire 25,000 (Lire-$.193) at the disposition of the jury. At the same time as the horticultural exhibition a most important portrait exhibition will take place in the art rooms, which have recently been restored in the historical municipal palace (Palazzo Vecchio) besides other shows and amusements.

Plant Notes.

Iris ochroleuca is one of the prettiest flowers of the week.

A pretty spurge, not as yet very widely known, is Euphorbia epithymoides, a species growing about 15 inches high, and having moderately sized glaucous leaves, with heads of pleasing yellow flowers, which eventually turn off to rose. It blooms about June and July, and is a good border or rock plant. It is increased by division or cuttings.

Meetings Next Week.

Buffalo, N. Y., July 6, 8 p. m.—Buffalo Florists' Club, Saturn hall.
Butte, Mont., July 9.—Montana Florists' Club, Columbia Gardens.
Cincinnati, O., July 10, 8 p. m.—Cincinnati Florists' Society, Jabez Elliott Flower Market.
Davenport, Ia., July 8.—Tri-City Florists' Club.
Dayton, O., July 5, 8 p. m.—Dayton Florists' Club, 37 E. Fifth street.
Detroit, Mich., July 5, 8 p. m.—Detroit Florists' Club, Cowie building.
Grand Rapids, Mich., July 5.—Grand Rapids Florists' and Gardeners' Club, Board of Trade rooms, Pearl street.
Hartford, Conn., July 9, 8 p. m.—The Connecticut Horticultural Society, County building.
Indianapolis, Ind., July 6, 7:30 p. m.—State Florists' Association of Indiana, State House.
Louisville, Ky., July 6, 8 p. m.—The Kentucky Society of Florists.
Montreal, Que., July, 5.—Montreal Gardeners' and Florists' Club, Royal Guardians building, 211 Sherbrook street, West.
New Orleans, La., July 7, 8 p. m.—German Gardeners' Club, 624 Common street.
Newport, R. I., July 7.—Newport Horticultural Society.
Pittsburg, Pa., July 6, 8 p. m.—Pittsburg and Allegheny Florists' and Gardeners' Club, 422 Sixth avenue.
Salt Lake City, Utah, July 6.—Salt Lake Florists' Club, Huddart Floral Co., 114 East Second South street.
Seattle, Wash., July 6.—Seattle Florists' Association, Chamber of Commerce, Second avenue and Columbia street.
St. Louis, Mo., July 8, 2 p. m.—St. Louis Florists' Club, Bowman hall, 1023 Locust street.
Washington, D. C., July 6, 8 p. m.—Florists' Club of Washington, 1214 F street Northwest.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

Situation Wanted—As salesman, designer and decorator; salary considered if position is good.
Key 841 care American Florist

Situation Wanted—By competent florist and gardener single; private place perferred.
Key 846, care American Florist.

Situation Wanted—Gardener; aged 33; married; 16 years practical experience in all branches of horticulture both in England and Scotland
FOSTER, 228 South Aiden St. Philadelphia, Pa.

Situation Wanted—To recommend a sober and trustworthy greenhouse man; single; any firm wishing a man they can rely on. Address
THE MINGE FLORAL CO., Mobile Ala.

Situation Wanted—By young man; married; German; as foreman and grower of roses and carnations, can show best results; please state wages in first letter also full particulars. Address
Key 848, care American Florist.

Situation Wanted—By all around grower; 15 years' experience; German; sober and reliable; capable of taking entire charge; best of references
Address 66 care Mr. A. Jeffers,
R. F. D. No. 1. Burke, Virginia.

Situation Wanted—By a married man of 33; life time experience; 10 years in last place; to take charge of a private or small commercial place good grower of all kinds of flowers; best of reference; please state wages and particulars. Address
Key 847, care American Florist.

Situation Wanted—Gardener and florist, single 28 years of age; 14 years' experience in private and commercial places; grower and propagator of pot and bedding plants, cut flowers, carnations, roses, gardenias, forcing vegetables landscaping; wish position July 1; private preferred; can furnish German and American references.
Key 843, care American Florist.

Help Wanted—Gardener to take care of grounds and greenhouses of public institution; salary $600 per annum and living in the institution; apply to the superintendent
TOPEKA (KANS.) STATE HOSPITAL Topeka, Kans.

Help Wanted—Competent carnation grower to take section under foreman.
G. VAN BOCHOVE & BRO., Kalamazoo, Mich.

Help Wanted—First-class designer, decorator and storeman for retail store. Address, giving particulars, salary, etc.,
Key 844, care American Florist.

Help Wanted—A man for general greenhouse work; must have experience in pot plants, 'mums and bedding stock. Address
Key 840 care American Florist.

Help Wanted—Experienced seedsman especially for house work on garden seed and packet seed department; also to travel on the road three to four months during the season. Address
Key 857, care American Florist

Help Wanted—Reliable traveling salesman to work market garden trade also to work in store; must have experience on the road also a thorough knowledge of the seed business; good salary to right party; best of references required.
J. F. NOLL & CO.,
115 Mulberry St., Newark, N. J.

For Sale—Greenhouse in Salida, Colorado, 6000 feet of glass, good trade, no competition; price low; address owner.
J. H. FREEMAN, Salida, Colo.

For Sale—A valuable greenhouse business in a good town; no competition; can sell more than you can grow at good prices; ill health.
DWIGHT GREENHOUSES Dwight Ill.

For Sale—15,000 feet of glass 20 acres of land; well located, well stocked; good reasons for selling; Eastern Ohio; wholesale; carnations a specialty; a bargain if sold at once. Address
Key 842 care American Florist.

For Sale—Florist's establishment, 12,000 ft of glass, two acres of ground large dwelling house, barn, etc; greenhouses nearly all new; best in town; property is on a corner, east front on best residence street in town; both interurban and city cars pass the place; progressive town of 30,000 inhabitants near Chicago; good reasons for selling. Key 845, care American Florist.

For Sale—Greenhouse plant of about 19,000 feet of glass; steam heat; cheap coal; all stock goes with the plant; six-room cottage; about one acre of ground; on car line; horse, wagons, tools, designs and all go with plant; a rare chance for a good florist with $5,000 cash; balance on easy terms; reason for selling, poor health, not able to look after the business. Address
A. D. JONES Colorado Springs, Colo.

For Sale—$3000 on easy terms will buy a desirable florist business in Tennessee; about two acres of ground, four greenhouses, barn, outbuildings and a nice 3-room cottage. Address
Key 838, care American Florist.

Opening for Nurseryman and Florist.

IN TOWN of 10,000, increasing rapidly; a city of homes and now beginning to wake up to city beautifying. Winterless climate, rich soil, plenty sunshine. Will send horticultural information and all details on request.

O. OWEN, Sec. Board of Trade, Port Arthur, Tex

Salesman Wanted.

If you call on florists—wholesale or retail—write for the best side line ever offered. Sale and commission large and sure. State kind of trade and territory covered in first letter, and references if possible; Confidential if desired.

GEO. S. L. BRUSH, Zanesville, O.

Situation Wanted

As foreman, able to take entire charge; have been very successful with roses and carnations; married; 20 years' experience in all lines; best of references from former places. Address

FLORIST, 284 E. Huron St., Chicago.

WANTED --- At Once

A good grower of roses, carnations, 'mums and general line of pot plants; must be able to produce results; permanent position and good pay.

——Address——

Key 839, care American Florist.

FOR SALE.

Fleischman's North Side Store,

Corner of State and Division Streets, with large conservatory in rear. Hot water heat. Hardwood fixtures. Good Lease. Will be sold at a sacrifice. Terms to suit. Apply
